

BAPATLA ENGINEERING COLLEGE :: BAPATLA

(Autonomous)

Department Of Electrical and Electronics Engineering

COURSE STRUCTURE

AND

SYLLABUS FOR 1st, 2nd, 3rd & 4th YEAR

B.TECH.

BAPATLA ENGINEERING COLLEGE :: BAPATLA

(Autonomous)

PROGRAM OUTCOMES (PO'S)

Program Outcomes		Engineering Graduates will be able to
PO1	Engineering knowledge	Apply the knowledge of mathematics, science, Engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.
PO2	Problem analysis	Identify, formulate, review research literature, and analyze complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.
PO3	Design/development of solutions	Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.
PO4	Conduct investigations of complex problems	Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.
PO5	Modern tool usage	Create, select, and apply appropriate techniques, Resources, and modern engineering and IT tools including prediction and modeling to complex engineering activities with an understanding of the limitations.
PO6	The engineer and society	Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional engineering practice.
PO7	Environment and sustainability	Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development.
PO8	Ethics	Apply ethical principles and commit to professional ethics and responsibilities and norms of the engineering practice.
PO9	Individual and team work	Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings.
PO10	Communication	Communicate effectively on complex engineering activities with the engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions.
PO11	Project management and finance	Demonstrate knowledge and understanding of the engineering and management principles and apply these to one's own work, as a member and leader in a team, to manage projects and in multidisciplinary environments.
PO12	Life-long learning	Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change

BAPATLA ENGINEERING COLLEGE :: BAPATLA

(Autonomous)

PROGRAM SPECIFIC OUTCOMES (PSO'S)

PSO1	The Electrical and Electronics Engineering graduates are capable of applying the Knowledge of mathematics and sciences in modern power industry.
PSO2	Analyze and design efficient systems to generate, transmit, distribute and utilize electrical energy to meet social needs using power electronic systems.
PSO3	Electrical Engineers are capable to apply principles of management and economics for providing better services to the society with the technical advancements in renewable and sustainable energy integration.

PROGRAM EDUCATIONAL OBJECTIVES (PEO'S)

PEO1	Have a strong foundation in the principles of Basic Sciences, Mathematics and Engineering to solve real world problems encountered in modern electrical engineering and pursue higher studies/placement/research.
PEO2	Have an integration of knowledge of various courses to design an innovative and cost effective product in the broader interests of the organization & society.
PEO3	Have an ability to lead and work in their profession with multidisciplinary approach, cooperative attitude, effective communication and interpersonal skills by participating in team oriented and open ended activities.
PEO4	Have an ability to enhance in career development, adapt to changing professional and societal needs by engage in lifelong learning.

BAPATLA ENGINEERING COLLEGE :: BAPATLA

(Autonomous)

Institutional Elective-I

- 18CEI01:** Air Pollution & Control
- 18CEI02:** Sustainable Water and Sanitation
- 18CSI01:** Java Programming
- 18CSI02:** Database Management Systems
- 18ECI01:** Consumer Electronics
- 18ECI02:** Embedded Systems
- 18EII01:** Principles & Applications of MEMS
- 18EII02:** Power System Instrumentation
- 18ITI01:** Data Analytics
- 18ITI02:** Cyber Security
- 18MEI01:** Fluid Power and Control Systems
- 18MEI02:** Project Management
- 18MAI01:** Linear Algebra
- 18PHI01:** Nano-Materials and Technology
- 18PHI02:** Fiber Optic Communication
- 18HUI01:** System Thinking
- 18ELI01:** English for Competitive Examinations
- 18ELI02:** Professional Communication

Institutional Elective-II

- 18CEI03:** Disaster Management
- 18CEI04:** Remote sensing & GIS
- 18CSI03:** Python Programming
- 18CSI04:** Computer Networks
- 18ECI03:** Artificial Neural Network
- 18ECI04:** Internet of Things (IoT)
- 18EII03:** Robotics and Automation
- 18EII04:** Advanced Computer Control Systems
- 18ITI03:** Mobile Application Developments
- 18ITI04:** Web Technology
- 18MEI03:** Non-Conventional Energy Sources
- 18MEI04:** Automobile Engineering
- 18MAI02:** Graph Theory
- 18PHI03:** Advanced Materials
- 18PHI04:** Optical Electronics
- 18HUI02:** Organizational Psychology
- 18HUI03:** Telugu Modern Literature
- 18ELI03:** English through Media

BAPATLA ENGINEERING COLLEGE :: BAPATLA

(Autonomous)

LINEAR ALGEBRA AND ODE

I B.Tech –I Semester (Code: 18MA001)

Lectures	4	Tutorial	0	Practical	0	Credits	3		
Continuous Internal Assessment			:	50	Semester End Examination (3 Hours)			:	50

Prerequisites: None

Course Objectives:

- CO1: To learn about solving a system of linear homogeneous and non-homogeneous equations, finding the inverse of a given square matrix and also its Eigen values and Eigen vectors.
- CO2: Identify the type of a given differential equation and select and apply the appropriate. Analytical technique for finding the solution of first order and higher order ordinary differential equations.
- CO3: Create and analyze mathematical models using first and second order differential equations to solve application problems that arises in engineering.
- CO4: To learn about solving linear Differential equations with constant coefficients with the given initial conditions using Laplace transform technique.

Course Outcomes: Students will be able to

- CLO1: Solve a system of linear simultaneous equations, finding the inverse of a given matrix and also its Eigen values and Eigen vectors.
- CLO2: Apply the appropriate analytical technique for finding the solution of a first order ordinary differential equation and use these techniques to solve some real life problems.
- CLO3: Solve higher order linear differential equations with constant coefficients and apply them to solve the circuit problems
- CLO4: Evaluate Laplace transform of a given function and apply laplace transform techniques to solve linear differential equaitons with constant coefficients

UNIT - I

Linear Algebra: Rank of a Matrix; Elementary transformations of a matrix; Gauss-Jordan method of finding the inverse; Consistency of linear System of equations: Rouches theorem, System of linear Non-homogeneous equations, System of linear homogeneous equations; vectors; Eigen values; properties of Eigen values(without proofs); Cayley-Hamilton theorem (without proof).

[Sections: 2.7.1; 2.7.2; 2.7.6; 2.10.1; 2.10.2; 2.10.3; 2.12.1; 2.13.1; 2.14; 2.15.]

BAPATLA ENGINEERING COLLEGE :: BAPATLA

(Autonomous)

UNIT - II

Differential Equations of first order: Definitions; Formation of a Differential equation; Solution of a Differential equation; Equations of the first order and first degree; variables separable; Linear Equations; Bernoulli's equation; Exact Differential equations; Equations reducible to Exact equations: I.F found by inspection, I.F of a Homogeneous equation, In the equation $M dx + N dy = 0$.

Applications of a first order Differential equations: Newton's law of cooling; Rate of decay of Radio-active materials.

[Sections: 11.1; 11.3; 11.4; 11.5; 11.6; 11.9; 11.10; 11.11; 11.12.1; 11.12.2; 11.12.4; 12.6; 12.8]

UNIT – III

Linear Differential Equations: Definitions; Theorem; Operator D; Rules for finding the complementary function; Inverse operator; Rules for finding the Particular Integral; Working procedure to solve the equation; Method of Variation of Parameters; Applications of Linear Differential Equations: Oscillatory Electrical Circuits.

[Sections: 13.1; 13.2.1; 13.3; 13.4; 13.5; 13.6; 13.7; 13.8.1; 14.1; 14.5]

UNIT – IV

Laplace Transforms: Definition; conditions for the existence; Transforms of elementary functions; properties of Laplace Transforms; Transforms of derivatives; Transforms of integrals; Multiplication by t^n ; Division by t ; Inverse transforms- Method of partial fractions; Other methods of finding inverse transforms; Convolution theorem(without proof); Application to differential equations: Solution of ODE with constant coefficients using Laplace transforms.

[Sections: 21.2.1; 21.2.2; 21.3; 21.4; 21.7; 21.8; 21.9; 21.10; 21.12; 21.13; 21.14; 21.15.1]

**WAVES AND MODERN PHYSICS**

(ENGINEERING PHYSICS-1)

I B.TECH – I SEMESTER (CODE-18PH001)

(Common for ECE, EEE, EIE)

Lectures	4	Tutorial	0	Practical	0	Credits	3
Continuous Internal Assessment			50	Semester End Examination (3hours)		50	

COURSE OBJECTIVES

CO1: To familiarize the students in getting knowledge about modern optics and their Engineering applications.

CO2: To make aware of the students to obtain circuit knowledge regarding electrical, Electronics and Magnetism.

CO 3: To make the students to understand the quantum theory and solving the various Physical problems using quantum mechanics.

CO 4: To get the knowledge of various methods of analytical techniques for material testing.

COURSE OUTCOMES: Student will be able to

CLO1: Learn about principle and working of different types of lasers and their applications.

CLO2: Know about principle, types of optical fibers of their importance in communication.

CLO3: Analyze the electromagnetic principles in electrical and electronic circuits and Maxwell's equations.

CLO4: Study about quantum mechanics and its applications.

CLO5: Read about properties and applications of ultrasonic's in various fields.

CLO6 : Know about radio isotopes and their applications.

UNIT-I (ADVANCED OPTICS)

Lasers: Interaction of radiation with matter. Einstein co-efficients, Properties of laser, Population inversion, LASER principle, pumping schemes-Three level and four level laser, types of lasers: solid-state lasers (Ruby), gas lasers (He-Ne), Semiconductor lasers; applications of lasers in industry and medicine.

Fibre Optics: Importance of optical fibre, Structure and principle of optical fibre, acceptance angle and numerical aperture, Types of optical fibers based on modes and refractive index, V-number, losses associated with optical fibers, fibre optical communication, advantages of optical fiber.

UNIT-II

(ELECTRO-MAGNETIC INDUCTION AND MAXWELL'S EQUATIONS)

Maxwell's equations in vacuum and conducting medium. Velocity of electromagnetic wave in vacuum. Electromagnetic oscillations in LC circuit, LCR series resonance in A.C circuit and resonant frequency, Quality factor. Concept of skin effect, Energy in an electromagnetic field; Flow of energy and Poynting vector. Principle of circulating charge and cyclotron, Hall Effect.

UNIT-III

(MODERN PHYSICS)

Dual nature of light, Debroglie concept of matter waves, Davission- Germer experiment, Heisenberg uncertainty principle and applications (non existence of electron in nucleus and finite width of spectral lines), one dimensional time independent and dependent Schrodinger wave equation, physical significance of wave function, application of Schrödinger wave equation to particle in a one dimensional potential box, concept of quantum tunneling and construction and working of Scanning Tunneling Electron Microscope.

UNIT-IV

(ANALYTICAL TECHNIQUES)

Ultrasonics: Properties of ultrasonic's, Production of ultrasonic waves by magneto striction and piezo-electric method, Determination of velocity of ultrasonic wave in liquids by Ultrasonic interferometer. Medical applications, Ultrasonic Imaging technique (Doppler Ultrasound Imaging advantages and limitations), industrial applications, NDT : Pulse echo technique, Time of flight diffraction technique.

Nuclear Techniques: Radio isotopes and its applications (medical and Industrial), GM counter, Scintillation counter.

TEXT BOOK:

**ENVIRONMENTAL STUDIES**

I B.Tech – I/II Semester (Code: 14CE001)

Lectures	4	Tutorial	0	Practical	0	Credits	2		
Continuous Internal Assessment			:	50	Semester End Examination (3 Hours)			:	50

Prerequisites: None**Course Objectives:** To learn

CO1: To develop an awareness, knowledge, and appreciation for the natural environment.

CO2: To understand different types of ecosystems exist in nature.

CO3: To know our biodiversity.

CO4: To understand different types of pollutants present in Environment.

CO5: To know the global environmental problems.

Course Outcomes: Students will be able to

CLO 1: Develop an appreciation for the local and natural history of the area.

CLO 2: Hope for the better future of environment in India which is based on many positive factors like Biodiversity, successive use of renewable energy resources and other resources, increasing number of people's movements focusing on environment.

CLO 3: Know how to manage the harmful pollutants.

CLO 4: Gain the knowledge of Environment.

CLO 5: Create awareness among the youth on environmental concerns important in the long-term interest of the society

UNIT – I**Introduction:** Definition, Scope and Importance, Need for public awareness. Ecosystems: Definition, Structure and Functions of Ecosystems, types - Forest, Grassland, Desert, Aquatic (Marine, pond and estuaries). 6 periods**Biodiversity:** Definition and levels of Biodiversity; Values of Biodiversity - Consumptive, Productive, Social, Aesthetic, Ethical and Optional; Threats and Conservation of Biodiversity; Hot Spots of Biodiversity, Bio-geographical Classification of India, India as a mega diversity nation. Chipko movement case study**UNIT – II****Natural resources: Land:** Land as a resource, Causes and effects of land degradation - Soil erosion, Desertification. **Forest:** Use of forests, Causes and effects of deforestation, Afforestation, Mining - benefits and problems. **Water:** Uses, floods and drought, Dams - benefits and problems.**Energy:** Importance of energy, Environmental Impacts of Renewable and Non-renewable energy resources. Silent Valley Project and Narmada Bachao Andolan case studies 8 periods

Sustainability: Definition, Concept and Equitable use of resources for sustainable development; Rain water harvesting and Watershed management. Fieldwork on Rain water harvesting and Watershed management.

UNIT – III

Pollution: Definition; Causes, effects and control of air, water and nuclear pollution; Chernobyl Nuclear Disaster case study; Solid Waste: urban, Industrial and hazardous wastes; Integrated waste management - 3R approach, composting and vermin composting.

Environmental acts: Water and air (Prevention and Control of pollution) acts, Environmental protection act, Forest Conservation act.

UNIT – IV

Environmental issues: Green house effect & Global warming, Ozone layer depletion, Acid rains, Green Revolution, Population Growth and environmental quality, Environmental Impact Assessment. Environmental Standards (ISO 14000, etc.)

Case Studies: Bhopal Tragedy, Mathura Refinery and TajMahal, and Ralegan Siddhi (Anna Hazare).

Field work: Visit to a local area to document environmental assets – Pond/Forest/Grassland. Visit to a local polluted site- Urban and industry/ Rural and Agriculture.

**COMMUNICATIVE ENGLISH**

I B.Tech – I/II Semester (Code: 18EL001)

Lectures	4	Tutorial	0	Practical	0	Credits	2		
Continuous Internal Assessment			:	50	Semester End Examination (3 Hours)			:	50

Course Objectives : The course aims

CO1: To enhance the vocabulary competency of the students

CO2: To enable the students to demonstrate proficiency in the use of written English, including proper spelling, grammar, and punctuation

CO3: To introduce corrective measures to eliminate grammatical errors in speaking and writing

CO4: To enhance theoretical and conceptual understanding of the elements of grammar.

CO5: To Understand and apply the conventions of academic writing in English

CO6: To enhance the learners' ability of communicating accurately and fluently

Course Outcomes: By the end of the course the student would be able to

CLO1: Understand how to build academic vocabulary to enrich their writing skills

CLO2: Produce accurate grammatical sentences

CLO3: Analyse the content of the text in writing

CLO4: Produce coherent and unified paragraphs with adequate support and detail

UNIT-I1.1 **Vocabulary Development:** Word formation-Formation of Nouns, Verbs & Adjectives from Root words-Suffixes and Prefixes1.2 **Essential Grammar:** Prepositions, Conjunctions, Articles1.3 **Basic Writing Skills:** Punctuation in writing1.4 **Writing Practices:** Mind Mapping, Paragraph writing (structure-Descriptive, Narrative, Expository & Persuasive)**UNIT-II**2.1 **Vocabulary Development:** Synonyms and Antonyms2.2 **Essential Grammar:** Concord, Modal Verbs, Common Errors2.3 **Basic Writing Skills:** Using Phrases and clauses2.4 **Writing Practices:** Hint Development, Essay Writing

BAPATLA ENGINEERING COLLEGE :: BAPATLA

(Autonomous)

UNIT III

- 3.1 Vocabulary Development:** One word Substitutes
- 3.2 Essential Grammar:** Tenses, Voices
- 3.3 Basic Writing Skills:** Sentence structures (Simple, Complex, Compound)
- 3.4 Writing Practices:** Note Making

UNIT IV

- 4.1 Vocabulary Development:** Words often confused
- 4.2 Essential Grammar:** Reported speech, Common Errors
- 4.3 Basic Writing Skills:** Coherence in Writing: Jumbled Sentences
- 4.4 Writing Practices:** Paraphrasing & Summarising

TEXT BOOKS/REFERENCE BOOKS:

**ENGINEERING GRAPHICS**

I B.Tech – I Semester (Code: 18MEL01)

Lectures	1	Tutorial	0	Practical	4	Credits	3		
Continuous Internal Assessment			:	50	Semester End Examination (3 Hours)			:	50

Prerequisites: None**Course Objectives:** To learn

CO1: clear picture about the importance of engineering graphics in the field of engineering

CO2: the drawing skills and impart students to follow Bureau of Indian Standards

CO3: To give an idea about Geometric constructions, Engineering curves, orthographic projections and pictorial projections

CO4: imagination skills about orientation of points, lines, surfaces and solids

CO5: basic drafting skills of AutoCAD

Course Outcomes: Students will be able to

CLO-1: draw projections of points and projections of lines using Auto CAD

CLO-2: plot projections of surfaces like circle, square and rhombus

CLO-3: plot the Projections of solids like Prisms and pyramids

CLO-4: convert the of Orthographic views into isometric views of simple objects

CLO-5: generate the of pictorial views into orthographic views of simple castings

UNIT – I**INTRODUCTION:** Introduction to Drawing instruments and their uses, geometrical construction procedures**INTRODUCTION TO AUTOCAD:**

Basics of sheet selection, Draw tools, Modify tools, dimensioning

METHOD OF PROJECTIONS: Principles of projection - First angle and third angle projection of points. Projection of straight lines. Traces of lines.**UNIT II****PROJECTIONS OF PLANES:** Projections of plane figures: circle, square, rhombus, rectangle, triangle, pentagon and hexagon.**UNIT – III****PROJECTIONS OF SOLIDS:** Projections of Cubes, Prisms, Pyramids, Cylinders and Cones Inclined to one plane.**UNIT –IV****ISOMETRIC PROJECTIONS:** Isometric Projection and conversion of Orthographic views into isometric views. (Treatment is limited to simple objects only).

BAPATLA ENGINEERING COLLEGE :: BAPATLA

(Autonomous)

ORTHOGRAPHIC PROJECTIONS: Conversion of pictorial views into Orthographic views. (Treatment is limited to simple castings).

PHYSICS LABORATORY
I B.Tech– I Semester (Code: 18PHL01)
(COMMON TO ALL BRANCHES)

Lectures	0	Tutorial	0	Practical	3	Credits	1
Continuous Internal Assessment			50	Semester End Examination (3hours)			50

Course Objectives: To make the students

CO1: Realize the importance of electrical and magnetic laws.

CO2: Quantify the various physical parameters through optical principles.

CO3: Estimate the material parameters through stress and strain experiments.

CO4: Explore and operate the different opto-electronic devices.

Course Outcomes: Students will be able to

CLO1: Acknowledge the important aspects of earth magnetic field, realize the use of Maxwell's equations in various magnetic applications.

CLO2: Applications of basic principles of optics to estimate physical parameters.

CLO3: Realization of material properties and parameters.

CLO4: Get hands on experience in various opto-electronic devices like Solar Cell, Photo Cell and their applications

LIST OF EXPERIMENTS

1. Determination of acceleration due to gravity at a place using compound pendulum.
2. Study the variation of intensity of magnetic field along the axis of a circular coil using
3. Stewart-Gee's apparatus.
4. Determination of thickness of thin wire using air wedge interference bands.
5. Determination of radius of curvature of a Plano convex lens by using Newton's rings.
6. Determination of wavelengths of mercury spectrum using grating normal incidence method.
7. Determination of dispersive power of a given material of prism using prism minimum deviation method.
8. Draw the resonant characteristic curves of L.C.R. series circuit and calculate the resonant frequency.
9. Draw the characteristic curves of a photocell and calculate the maximum velocity of electron.
10. Verify the laws of transverse vibration of stretched string using sonometer.
11. Determine the rigidity modulus of the given material of the wire using Torsional Pendulum.
12. Draw the load characteristic curves of a solar cell.
13. Determination of Hall coefficient of a semiconductor.
14. Determination of voltage and frequency of an A.C. signal using C.R.O.
15. Determination of Forbidden energy gap of Si & Ge.
16. Determination of wavelength of laser source using Diode laser.

**ENGLISH COMMUNICATION SKILLS LABORATORY**

I B.Tech – I/II Semester (Code: 18ELL01)

Lectures	0	Tutorial	0	Practical	3	Credits	1		
Continuous Internal Assessment			:	50	Semester End Examination (3 Hours)			:	50

Course Objectives:

- CO1: To sensitize the students to the nuances of English speech sounds, word accent, intonation and rhythm
- CO2: To bring about a consistent accent and intelligibility in students' pronunciation of English by providing an opportunity for practice in speaking
- CO3: To improve students' fluency in English and neutralize their mother tongue
- CO4: To make them use effective vocabulary both in formal and informal situations

Course Learning Outcomes:

The student would be able to

- CLO1: Better understand the nuances of English language through audio- visual experience and group activities
- CLO2: Develop neutralization of accent for intelligibility
- CLO3: Build confidence to enhance their speaking skills
- CLO4: Use effective vocabulary both in formal and informal situations

UNIT-I

- 1.1 Listening Skills; Importance – Purpose- Process- Types
- 1.2 Barriers to Listening
- 1.3 Strategies for Effective Listening

UNIT-II

- 2.1 Phonetics; Introduction to Consonant, Vowel and Diphthong sounds
- 2.2 Stress
- 2.3 Rhythm
- 2.4 Intonation

UNIT-III

- 3.1 Formal and Informal Situations
- 3.2 Expressions used in different situations
- 3.3 Introducing Yourself & Others-Greeting & Parting-Congratulating-Giving Suggestions & Advices-Expressing Opinions-Inviting People-Requesting-Seeking Permission-Giving Information- Giving Directions- Sympathizing- Convincing People- Complaining & Apologizing-Thanking Others- Shopping- Travelling- Conversational Gambits

**WORKSHOP PRACTICE**

I B.Tech – I/II Semester (Code: 18MEL02)

Lectures	0	Tutorial	0	Practical	3	Credits	1		
Continuous Internal Assessment			:	50	Semester End Examination (3 Hours)			:	50

Prerequisites: None**Course Objectives:**

1. To impart student knowledge on various hand tools for usage in engineering applications.
2. Be able to use analytical skills for the production of components.
3. Design and model different prototypes using carpentry, sheet metal and welding.
4. Make electrical connections for daily applications.
5. To make student aware of safety rules in working environments.

Course Outcomes: After completion of this course student should be able to:

1. Make half lap joint, Dovetail joint and Mortise & Tenon joint
2. Produce Lap joint, Tee joint and Butt joint using Gas welding
3. Prepare trapezoidal tray, Funnel and T-joint using sheet metal tools
4. Make connections for controlling one lamp by a single switch, controlling two lamps by a single switch and stair case wiring.

Syllabus:

1. Carpentry
 - a. Half Lap joint
 - b. Dovetail joint
 - c. Mortise & Tenon joint
2. Welding using electric arc welding process/gas welding
 - a. Lap joint
 - b. Tee joint
 - c. Butt joint
3. Sheet metal operations with hand tools
 - a. Trapezoidal tray
 - b. Funnel
 - c. T-joint
4. House wiring
 - a. To control one lamp by a single switch
 - b. To control two lamps by a single switch
 - c. Stair-case wiring

TEXT BOOKS:

**NUMERICAL METHODS AND ADVANCED CALCULUS**

I B.Tech –II Semester (Code: 18MA002)

Lectures	4	Tutorial	0	Practical	0	Credits	3		
Continuous Internal Assessment			:	50	Semester End Examination (3 Hours)			:	50

Prerequisites: None**Course Objectives:**

CO1: To learn about some advanced numerical techniques e.g. solving a nonlinear equation, linear system of equations, Interpolation and Approximation techniques.

CO2: To learn about evaluation of double and triple integrals and their applications.

CO3: To learn some basic properties of scalar and vector point functions and their applications to line, surface and volume integrals.

Course Outcomes: Students will be able to

CLO-1: Solve algebraic, transcendental and system of linear equations with the help of numerical methods.

CLO-2: Apply the techniques numerical integration whenever and wherever routine methods are not applicable and solve the first order ordinary differential equations numerically with the given initial condition using different methods.

CLO-3: Evaluate double and triple integrals and apply them to find areas and volumes

CLO-4: Evaluate the line, surface and volume integrals and learn their inter-relations and applications.

UNIT - I

Numerical Solution of Equations: Introduction; Solution of algebraic and transcendental equations: Bisection method, Method of false position, Newton-Raphson method; Useful deductions from the Newton-Raphson formula; Solution of linear simultaneous equations; Direct methods of solution: Gauss elimination method, Gauss-Jordan method, Factorization method; Iterative methods of solution: Jacobi's iterative method, Gauss-Seidel iterative method.

[Sections: 28.1; 28.2; 28.3; 28.5; 28.6; 28.7.1;28.7.2]. [12 Hours]

UNIT - II

Finite differences and Interpolation: Finite differences: Forward differences, Backward differences; Newton's interpolation formulae: Newton's forward interpolation formula, Newton's backward interpolation formula; Interpolation with unequal intervals; Lagrange's interpolation formula; Divided differences; Newton's divided difference formula; Numerical integration; Trapezoidal rule; Simpson's one-third rule; Simpson's three-eighth rule; Numerical solution of ODE's: Introduction; Picard's method; Euler's method; Runge-Kutta method.

[Sections: 29.1; 29.1-1; 29.1.2; 29.6; 29.9; 29.10; 29.11; 29.12; 30.4; 30.6; 30.7; 30.8; 32.1; 32.2; 32.4; 32.7]. [12 Hours]

UNIT – III

Multiple Integrals: Double integrals; Change of order of integration; Double integrals in polar coordinates; Area enclosed by plane curves; Triple integrals; Volumes of solids: Volume as Triple integrals, Change of variables.

[Sections: 7.1; 7.2; 7.3; 7.4; 7.5; 7.6.2; 7.7.2]. [12 Hours]

UNIT – IV

Vector calculus and its Applications: Scalar and vector point functions; Del applied to scalar point functions-Gradient: Definition, Directional derivative; Del applied to vector point functions: Divergence, Curl; Line integral; Surfaces: Surface integral, Flux across a surface; Green's theorem in the plane (without proof); Stokes theorem (without proof); Gauss divergence theorem (without proof).

[Sections: 8.4; 8.5.1; 8.5.3; 8.6; 8.11; 8.12; 8.13; 8.14; 8.16] [12 Hours]

**ENGINEERING CHEMISTRY-1****(Common to all branches)****I B.Tech – I/II Semester (Code: 18CY001)**

Lectures	4	Tutorial	0	Practical	0	Credits	3		
Continuous Internal Assessment			:	50	Semester End Examination (3 Hours)			:	50

PREREQUISITES: None**COURSE OBJECTIVES:** The student should be conversant:

CO1: With the principles of water characterization and treatment of water for industrial purposes and methods of producing water for potable purposes.

CO2: To understand the thermodynamic concepts, energy changes, concept of corrosion & its control.

CO3: With the conventional energy sources, solid, liquid and gaseous Fuels & knowledge of knocking and anti-knocking characteristics.

CO4: With aim to gain good knowledge of organic reactions, plastics, conducting polymers & biodegradable polymers.

COURSE OUTCOME: After studying this course, students will be able to

CLO-1: Develop innovative methods to produce soft water for industrial use and potable water at cheaper cost.

CLO-2: Apply their knowledge in converting various energies of different systems and protection of different metals from corrosion.

CLO-3: Have the capacity of applying energy sources efficiently and economically for various needs.

CLO-4: Design economically and new methods of organic synthesis and substitute metals with conducting polymers and also produce cheaper biodegradable polymers to reduce environmental pollution.

UNIT -I**Water Chemistry****Introduction:** water quality parameters**Characteristics:** Alkalinity, Hardness - Estimation & simple numerical problems,**Boiler Troubles** - Sludges, Scales, Caustic embrittlement, boiler corrosion, Priming and foaming;**Internal conditioning-** phosphate, calgon and carbonate methods.**External conditioning** - Ion exchange process & Zeolite process WHO Guidelines, Potable water, Sedimentation, Coagulation, Filtration. Disinfection methods: Chlorination, ozonization and UV treatment. Salinity – Treatment of Brackish water by Reverse Osmosis and Electrodialysis.

UNIT- II

Thermodynamic functions: energy, entropy and free energy. Estimations of entropy and free energies. Free energy and emf. Cell potentials, the Nernst equation and applications.

Corrosion: Types of corrosion - Chemical or dry corrosion, Electrochemical or wet corrosion; Galvanic, stress, pitting and differential aeration corrosion; Factors effecting corrosion.

Corrosion control – Cathodic protection, and electro plating (Au)& electroless Ni plating.

UNIT- III

Fuels: Classification of fuels; Calorific value of fuels (lower, higher)

Solid fuels: Determination of calorific value (Bomb Calorimeter) & related problems, Coal ranking,

Liquid Fuels: Petroleum refining and fractions, composition and uses. Knocking and anti-knocking Agents, Octane number and Cetane number; Bio fuels- Biodiesel, general methods of preparation and advantages

Gaseous fuels: CNG and LPG, Flue gas analysis – Orsat apparatus.

UNIT- IV

Organic reactions and synthesis of a drug molecule

Introduction to reactions involving substitution (SN^1 , SN^2), addition (Markownikoff's and anti-Markownikoff's rules), elimination (E_1 & E_2), Synthesis of a commonly used drug molecule. (Aspirin and Paracetamol)

Polymers: Conducting polymers: Classification, Intrinsic and Extrinsic conducting polymers and their applications. Plastics: Thermo plastics and thermosetting plastics, Bakelite and PVC.

Bio degradable polymers: types, examples-Polyhydroxybutyrate (PHB), Polyhydroxybutyrate-co- β -hydroxyvalerate (PHBV), applications.

**SEMICONDUCTOR PHYSICS AND NANO MATERIALS**

I B.Tech II-semester: CODE: 18PH003

(Common for CSE, IT,EEE,&EIE)

Lectures	3	Tutorials	0	Practical	0	Credits	3
Continuous Internal Assessment			50	Semester End Examination			50

Course Objectives:

CO1: This unit aim to build the foundation and inspires interest of freshmen into electrical and electronics and to focus on fundamental concepts and basic principles regarding electrical conduction.

CO2: This unit provides various properties of semiconductor materials and their importance in various device fabrications.

CO3: This unit aim to educate the student on various opto-electronic devices and their applications.

CO4: This unit provide information about the principles of processing, manufacturing and characterization of nano materials, nanostructures and their applications.

COURSE OUTCOMES:

The students were able to

CLO1: understand concepts of band structure of solids, concept of hole and effective mass of electron in semiconductors.

CLO2: know the concept of Fermi level and various semiconductor junctions.

CLO3: familiar with working principles of various opto-electronic devices and their applications.

CLO4: understand importance of nano-materials and their characteristic properties.

UNIT –I

ELECTRONIC MATERILAS: Somerfield free electron theory, Fermi level and energy, density of states, Failure of free electron theory (Qualitative), Energy bands in solids, E-K diagrams, Direct and Indirect band gaps. Types of Electronic materials: Metals, Semiconductors and Insulators, Occupation Probability, effective mass, Concept of hole.

UNIT – II

SEMICONDUCTORS: Introduction to semiconductors, intrinsic and extrinsic semiconductors, carrier concentrations, Fermi level and temperature dependence, Continuity equation, Diffusion and drift, P-N junction (V-I characteristics), Metal – Semiconductor junction (Ohmic and Schottky), Semiconductor materials of interest for opto- electronic devices.

UNIT-III

OPTO-ELECTRONIC DEVICES AND DISPLAY DEVICES: Photo voltaic effect, principle and working of LED, Applications of Photo diode, Solar cell, PIN & APD Diode, Liquid crystal display, Opto electric effect: Faraday Effect and Kerr effect.

UNIT-IV

NANO-MATERIALS: Introduction to nano technology, quantum confinement, surface to volume ratio, properties of nano materials, synthesis of nano-materials: CVD, sol-gel methods, laser ablation. Carbon nano tubes: types, properties, applications. Characterization of nano materials: XRD, SEM, applications of nano materials.

TEXT BOOKS:

1. A text book of engineering physics by Avadhanulu and Kshirsagar S.Chand& Co. (2013)
2. Applied physics by Dr.P.Srinivasa Rao. Dr.K.Muralidhar
3. Introduction to solid state physics, Charles Kittel, 8th edition
4. Solid state physics, S.O. Pillai

REFERENCE BOOKS:

1. Text book on Nanoscience and Nanotechnology (2013): B.S. Murty, P. Shankar, Baldev Raj, B.B. Rath and J. Murday, Springer Science & Business Media.
2. Basic Engineering Physics, Dr.P.SrinivasaRao. Dr.K.Muralidhar. Himalaya Publications, 2016

CLO, PO and PSO Mapping:

**CIRCUIT THEORY**

I B.Tech – II Semester (Code: 18EE204)

Lectures	4	Tutorial	0	Practical	0	Credits	3
Continuous Internal Assessment			50	Semester End Examination (3 Hours)			50

Prerequisites: Basic Mathematics, Basic Physics**Course Objectives:** To make the students

CO1: Understand basic Laws in circuits, circuit elements and sources and their characteristics.

CO2: Understand fundamental concepts of alternating current and voltages, power triangle and power factor.

CO3: Analyze circuits with network topology.

CO4: Analyze circuits with different DC and AC sources.

CO5: Gain knowledge about statement and application of various theorems.

CO6: Understand concept of resonance in series and parallel circuits.

Course Outcomes: Students will be able to

CLO1: Gain knowledge about basic Laws, circuit elements and sources and their characteristics.

CLO2: Draw phasor diagrams, phase relations in elements and power triangle.

CLO3: Analyze circuits with network topology.

CLO4: Solve problems involving with different AC and DC sources in electrical circuits.

CLO5: Synthesis the circuits with various theorems.

CLO6: Demonstrate the series and parallel resonance circuits.

UNIT – I

CIRCUIT ELEMENTS AND SOURCES: Basic definition of the unit of Charge, Voltage, Current, Power and Energy, Circuit concept, various circuit elements, Ideal, Practical and dependent sources and their V-I characteristics, Source transformation, Voltage and Current division, series / parallel combination of elements, Star-Delta transformation, Energy stored in Inductors and Capacitors, Kirchhoff's laws, Instantaneous, Peak, Average and RMS values of various waveforms, Crest factor, Form factor; Concept of phase and phase difference in sinusoidal waveforms, Phase relation in pure resistor, Inductor and capacitor, Impedance diagram, phasor diagram, series and parallel circuits, compound Circuits, Computation of active, reactive and complex powers, power triangle, power factor.

**UNIT – II**

NETWORK TOPOLOGY: Concepts of a Network Graph, Terminology used in Network Graph, Relation between Twigs and Links, Formation of incidence matrix, tie-set matrix, fundamental tie-set matrix, cut-set matrix, fundamental cut-set matrix and Relation between matrices, Kirchhoff's voltage law in Topological form, Kirchhoff's current law in Topological form, Relation between branch voltage, Twig voltage matrix and node voltage matrix, Relation between branch voltage matrix and loop current matrix, Network equilibrium equations, principle of duality and construction of a dual network.

UNIT – III

CIRCUIT ANALYSIS AND NETWORK THEOREMS: Mesh, Super mesh, Node and Super node Analysis, Analysis with dependent current and voltage sources, Superposition theorem, Thevenin's and Norton's theorems, Reciprocity, Compensation, Maximum power transfer theorems, Tellegen's and Millman's theorems to both independent and dependent current and voltage sources.

UNIT – IV

RESONANCE: Series resonance, Impedance and phase angle, voltages and currents, bandwidth and Q factor and its effect on bandwidth, magnification, parallel resonance, resonant frequency, variation of impedance with frequency, Q factor, magnification, reactance curves in parallel resonance, Locus diagrams for series and parallel circuits.

TEXT BOOKS:

1. William H. Hayt, Jack E. Kemmerly and Steven M. Durbin, "Engineering Circuit Analysis", 8th Edition, TMH, 2012.
2. M E Van Valkenburg, "Network Analysis", 3rd Edition, PHI, 2006.
3. C L Wadhwa, "Network analysis and synthesis", New Age International, 2nd Edition, 2006.

REFERENCE BOOKS:

**PROBLEM SOLVING USING PROGRAMMING**

(Common for all branches except Civil Engineering)

I B.Tech – II Semester (Code: 18CS001)

Lectures	4	Tutorial	0	Practical	0	Credits	3		
Continuous Internal Assessment			:	50	Semester End Examination (3 Hours)			:	50

Prerequisites: BASIC MATHEMATICS**Course Objectives:** Students will be able to

1. Understand basic concepts of C Programming such as: C-tokens, Operators, Input/output, and Arithmetic rules.
2. Develop problem-solving skills to translate 'English' described problems into programs written using C language.
3. Use Conditional Branching, Looping, and Functions.
4. Apply pointers for parameter passing, referencing and differencing and linking data structures.
5. Manipulate variables and types to change the problem state, including numeric, character, array and pointer types, as well as the use of structures and unions, File.

Course Outcomes:

After the course the students are expected to be able to

1. Choose the right data representation formats based on the requirements of the problem.
2. Analyse a given problem and develop an algorithm to solve the problem.
3. Use the comparisons and limitations of the various programming constructs and choose the right one for the task in hand.
4. Write the program on a computer, edit, compile, debug, correct, recompile and run it.
5. Identify tasks in which the numerical techniques learned are applicable and apply them to write programs, and hence use computers effectively to solve the task.

UNIT- I

Overview of C, Constants, Variables and Data Types, Operators and Expressions, Managing I/O Operations. Decision Making and Branching.

Programming Exercises for Unit I: C-expressions for algebraic expressions, evaluation of arithmetic and Boolean expressions. Syntactic and logical errors in a given program, output of a given program, values of variables at the end of execution of a program fragment, Programs using Scientific and Engineering formulae. Finding the largest of the three given numbers. Computation of discount amount on different types of products with different discount percentages. Finding the class of an input character, finding the type of triangle formed with the given sides, computation of income-tax, finding given year is leap year or not, and conversion of lower case character to its upper case.

UNIT -II

Decision Making and Looping, Arrays, Character Arrays and Strings.

Programming Exercises for Unit II: To print the sum of the digits of a given number and to display the image of a given number. To find whether a given number is prime, printing Fibonacci sequence and to find prime factors of a given number. To print graphic patterns of symbols and numbers. To find the length of a string, compare strings, reverse a string, copy a string and to find whether the given string is palindrome or not with and without using String Handling Functions. Transpose of a matrix and sorting of names using arrays.

UNIT- III

User-defined Functions, Structures and Unions, Pointers

Programming Exercises for Unit - III: Functions - Recursive functions to find factorial & GCD (Greatest Common Divisor), string operations using pointers and pointer arithmetic. Swapping two variable values. Sorting a list of student records on register number using array of pointers

UNIT -IV

File Management in C, Dynamic Memory Allocation, Preprocessor

Programming Exercises for Unit - IV: Operations on complex numbers, and to read an input file of marks and generate a result file, sorting a list of names using command line arguments. Copy the contents of one file to another file. Allocating memory to variables dynamically.

**ENGINEERING CHEMISTRY LABORATORY****(Common to all branches)****I B.Tech – I/II Semester (Code: 18CYL01)**

Lectures	0	Tutorial	0	Practical	3	Credits	1		
Continuous Internal Assessment			:	50	Semester End Examination (3 Hours)			:	50

Prerequisites: Nil**Course Objectives:** To make the students

CO1: The basics of chemistry lab to carry out the qualitative and quantitative analysis of any given sample.

CO2: To determine the percentage purity of washing soda bleaching powder and given salt.

CO3: The measurement of quality parameters of water to check its suitability for domestic and industrial purpose

CO4: To estimate the characteristic properties of oil for its use at various level.

CO5: To synthesize the Soap, Resin and Aromatic Ester followed by their applications.

CO6: The use and utility of some instruments like P^H meter, Conductometer and Potentiometer for various applications.**Course Outcomes:** Students will be able to

CLO1: Familiar with fundamental basics of Chemistry lab.

CLO2: Ability to estimate purity of washing soda, bleaching powder and quantity of Iron and other salts.

CLO3: Gain the knowledge regarding the quality parameters of water like salinity, hardness, alkalinity etc.

CLO4: Able to analyse the given oil for saponification and iodine value.

CLO5: Ability to prepare high polymers and soap.

CLO6: Ability to understand the estimation of quality parameters by instrumentation techniques.

LIST OF EXPERIMENTS

- 1. Introduction to Chemistry Lab** (the teachers are expected to teach fundamentals like Calibration of Volumetric Apparatus, Primary, Secondary Solutions, Normality, Molarity, Molality etc. and error, accuracy, precision, theory of indicators, use of volumetric titrations).
- 2. Volumetric Analysis:**
 - a. Estimation of Washing Soda.

- b. Estimation of Active Chlorine Content in Bleaching Powder
- c. Estimation of Mohr's salt by permanganometry.
- d. Estimation of given salt by using Ion-exchange resin using Dowex-50.

3. Analysis of Water:

- a. Determination of Alkalinity of Tap water.
- b. Determination of Total Hardness of ground water sample by EDTA method
- c. Determination of Salinity of water sample

4. Estimation of properties of oil:

- a. Estimation of Acid Value
- b. Estimation of Saponification value

5. Preparations:

- a. Preparation of Soap
- b. Preparation of Urea-formaldehyde resin
- c. Preparation of Phenyl benzoate

6. Demonstration Experiments (Any two of the following):

- a. Determination of p^H of given sample.
- b. Determination of conductivity of given sample by conduct meter.
- c. Potentiometric Determination of Iron.

TEXT BOOKS (for Chemistry 1 and 2):

1. Practical Engineering Chemistry by K.Mukkanti, Etal, B.S. Publications, Hyderabad, 2009.
2. Inorganic quantitative analysis, Vogel, 5th edition, Longman group Ltd. London, 1979.

REFERENCE BOOKS:

1. Text Book of engineering chemistry by R.n. Goyal and HarmendraGoel.
2. A text book on experiments and calculations- Engineering Chemistry. S.S. Dara.
3. Instrumental methods of chemical analysis, Chatwal, Anand, Himalaya Publications.

BAPATLA ENGINEERING COLLEGE :: BAPATLA

**CIRCUIT THEORY LAB**

I B.Tech – II Semester (Code: 18EEL22)

Lectures	0	Tutorial	0	Practical	3	Credits	1		
Continuous Internal Assessment			:	50	Semester End Examination (3 Hours)			:	50

Pre-requisites: Circuit theory, Mathematics**Course Objectives:** To make the students

CO1: Understand and verify basic Kirchhoff's laws in circuits.

CO2: Understand and verify fundamental theorems of circuit theory.

CO3: Able to determine the parameters of a given choke coil.

CO4: Understand the locus diagrams of series RL, RC circuits.

CO5: Understand and verify fundamental theorems of circuit theory using software.

Course Outcomes: Students will be able to

CLO1: Gain knowledge about basic Kirchhoff's laws in circuits.

CLO2: Verify fundamental theorems of circuit theory.

CLO3: Analyze the parameters of a given choke coil.

CLO4: To draw the locus diagrams of series RL, RC circuits.

CLO5: Verify fundamental theorems of circuit theory using software.

LIST OF EXPERIMENTS

1. Verification of KCL and KVL
2. Verification of Superposition theorem
3. Verification of Thevenin's theorem
4. Verification of Norton's theorem
5. Verification of Reciprocity theorem
6. Verification of Maximum Power Transfer theorem
7. Parameters of Choke coil
8. Measurement of low and medium resistance using volt ampere method
9. Locus diagram of RL series circuit
10. Locus diagram of RC series circuit
11. Steady state analysis of RL, RC and RLC series circuits using software
12. Verification of Superposition theorem using software
13. Verification of Thevenin's and Norton's theorem using software
14. Verification of Maximum Power Transfer theorem DC and AC circuits using software
15. Locus diagram of RL and RC series circuit using software

Note: Minimum 10 experiments should be carried out.

CLO PO and PSO mapping:

**PROBLEM SOLVING USING PROGRAMMING LAB**

I B.Tech – II Semester (Code:18CSL01)

Lectures	0	Tutorial	0	Practical	3	Credits	1		
Continuous Internal Assessment			:	50	Semester End Examination (3 Hours)			:	50

Prerequisites: Basic Mathematics**Course Objectives:** To make the students

CO1: Understand basic concepts of C Programming such as: C-tokens, Operators, Input/output, and Arithmetic rules.

CO2: Develop problem-solving skills to translate “English” described problems into programs written using C language.

CO3: Use Conditional Branching, Looping, and Functions.

CO4: Apply pointers for parameter passing, referencing and differencing and linking data structures.

CO5: Manipulate variables and types to change the problem state, including numeric, character, array and pointer types, as well as the use of structures and unions, File.

Course Outcomes: Students will be able to

CLO1: Identify the right data representation formats for the given problem.

CLO2: Use appropriate conditional/iterative statements to solve the problems.

CLO3: Apply the concepts of user defined functions and recursion to support reusability

CLO4: Design an application using the concepts of array, pointer, structure, and file management to solve real world problem.

LIST OF PROGRAMMES:

- 1.A program for electricity bill taking different categories of users, different slabs in each category. (Using nested if-else statement).

Domestic Customer:		
Consumption Units	Rate of Charges(Rs.)	
0 – 200	0.50 per unit	
201 – 400	100 plus	0.65 per unit
401 – 600	230 plus	0.80 per unit
601 and above	390 plus	1.00 per unit
Commercial Customer:		
Consumption Units	Rate of Charges(Rs.)	
0 – 100	0.50 per unit	
101 – 200	50 plus	0.6 per unit
201 – 300	100 plus	0.70 per unit
301 and above	200 plus	1.00 per unit

2. Write a C program to evaluate the following (using loops):
 - a) $1 + x^2/2! + x^4/4! + \dots$ up to ten terms
 - b) $x + x^3/3! + x^5/5! + \dots$ up to ten terms
3. Write a C program to check whether the given number is
 - a) Prime or not.
 - b) Perfect or Abundant or Deficient.
4. Write a C program to display statistical parameters (using one – dimensional array).
 - a) Mean
 - b) Mode
 - c) Median
 - d) Variance.
5. Write a C program to read a list of numbers and perform the following operations
 - a) Print the list.
 - b) Delete duplicates from the list.
 - c) Reverse the list.
6. Write a C program to read a list of numbers and search for a given number using Binary search algorithm and if found display its index otherwise display the message “Element not found in the List”.
7. Write a C program to read two matrices and compute their sum and product.
8. Write a C program to read list of student names and perform the following operations
 - a) To print the list of names.
 - b) To sort them in ascending order.
 - c) To print the list after sorting.
9. Write a C program that consists of recursive functions to
 - a) Find factorial of a given number
 - b) Solve towers of Hanoi with three towers (A, B & C) and three disks initially on tower A.
10. A Bookshop maintains the inventory of books that are being sold at the shop. The list includes details such as author, title, price, publisher and stock position. Whenever a customer wants a book the sales person inputs the title and the author, and the system searches the list and displays whether it is available or not. If it is not, an appropriate message is displayed, if it is, then the system displays the book details and request for the number of copies required, if the requested copies are available the total cost of the requested copies is displayed otherwise the message “required copies not in stock” is displayed. Write a program for the above in structures with suitable functions.
11. Write a C program to read a data file of students’ records with fields(Regno, Name, M1, M2, M3, M4, M5) and write the successful students data (percentage > 40%) to a data file.
12. Write a C program to read a file as command line argument and count the given word frequency in a file

**PROBABILITY AND STATISTICS****Common to All Branches**

II B.Tech-III Semester (Code: 18MA003)

Lectures	3	Tutorial	1	Practical	0	Credits	3
Continuous Internal Assessment			50	Semester End Examination (3 Hours)			50

Course Objectives:

CO1: To provide principles of statistical methods and probability concepts that serves the foundations for the applications of methods in engineering.

CO2: To educate the student on the applications of various t-tests to various problems in the field of engineering.

CO3: To educate the student on the application of completely randomized designs (CRD) and randomized block designs (RBD) to different realistic problems in the field of engineering.

CO4: To motivate the student on the applications of single and multiple regression analysis to the regression model arising in the field of engineering.

Course Outcomes:

Upon the successful completion of the course, the student will be able to:

1. Understand various continuous probability density functions and apply them to various problems in science and engineering.
2. Estimate the point and interval estimators of the mean, variance and proportion for the given Sample data and apply Z-test, t-test -tests to various real life problems.
3. Apply various sample tests like F-test and χ^2 -test for decision making regarding the population based on sample data and perform one way and two way analysis of variance to different realistic problems.
4. Compute the level of correlation, the linear relationship for the given bivariate data and the Best fit curve to the given data by the method of least squares. Also perform multiple regression analysis to the regression model arising in the field of engineering.

UNIT – I

Continuous Random Variables, Normal Distribution, Normal Approximation to the Binomial Distribution, Uniform Distribution, Gamma Distribution and its applications, Beta Distribution and its applications, Joint Distributions (Discrete), Joint Distributions (Continuous). Populations and Samples, Law of large numbers, Central limit theorem and its applications, The sampling distribution of the mean (σ unknown), The sampling distribution of the variance.

(Sections 5.1, 5.2, 5.3, 5.5, 5.7, 5.8, 5.10, 6.1, 6.2, 6.3, 6.4 of Text Book [1])

UNIT – II

Point estimation, Interval estimation, Tests of Hypotheses, Null Hypothesis and Tests of hypotheses, Hypothesis concerning one mean, Comparisons-Two independent Large samples, Comparisons-Two independent small samples, Paired sample t test.

(Sections 7.1, 7.2, 7.4, 7.5, 7.6, 8.2, 8.3, 8.4 of Text Book [1])

UNIT-III

The estimation of variances, Hypotheses concerning one variance, Hypotheses concerning two variances, Estimation of proportions, Hypotheses concerning one proportion, Hypotheses concerning several proportions, Procedure for Analysis of Variance (ANOVA) for

comparing the means of k (>2) groups- one way classification(Completely randomized designs), Procedure for Analysis of Variance (ANOVA) for comparing the means of k (>2) groups- two way classification(Randomized block designs). (Sections 9.1, 9.2, 9.3, 10.1, 10.2, 10.3, 12.2, 12.3 of Text Book [1])

UNIT -IV

Multivariate Analysis: The concept of bi variate relationship, scatter diagram, Pearson's correlation and correlation matrix. Simple linear regression model and assumptions, Least Squares Estimation of the parameters of the model, Testing the significance of the model. Regression versus Correlation, Multiple linear regression model with k explanatory variables and assumptions of the model. Least Square Estimation of regression coefficients. Concept of the coefficient of determination R^2 . Test for significance of the regression model and individual regression coefficients. Applications of multiple regression analysis. (1st and 2nd Chapters of Text Book [2]).

TEXT BOOKS:

1. Miller & Freund's "Probability and Statistics for Engineers", Richard A. Johnson, 8th Edition, PHI.
2. Introduction to Linear Regression Analysis, Douglas C. Montgomery, E.A. Peck and G.G. Vining, 3rd edition, Wiley.

REFERENCE BOOKS:

1. R.E Walpole, R.H. Myers & S.L. Myers 'Probability & Statistics for Engineers and Scientists', 6th Edition, PHI.
2. Fundamentals of Mathematical Statistics, S.C.Gupta and V.K.Kapoor, 11th Edition, Sultan Chand & Sons.
3. MurrayR Spiegel, John J.Schiller, R. Alu Srinivasa, 'Probability & Statistics', Schaum's outline series.
4. K.V.S.Sarma, 'Statistics Made Simple – Do it yourself on PC', Prentice Hall India, Second Edition, 2015.

**NETWORK ANALYSIS**

II B.Tech – III Semester (Code: 18EE302)

Lectures	4	Tutorial	1	Practical	0	Credits	4
Continuous Internal Assessment			50	Semester End Examination (3 Hours)			50

Prerequisites: Basic Mathematics**Course Objectives: To make the students**

CO1: Infer and evaluate transient response, Steady state response for single phase systems.

CO2: Analyze the circuits using Laplace Transforms.

CO3: Understand the concepts of three-phase systems and its analysis.

CO4: Evaluate two-port network parameters and network functions.

CO5: Analyze coupled circuits and its behavior.

CO6: Construct passive filters using constant K and M derived methods.

Course Outcomes: Students will be able to

CLO1: Analyze transient response, Steady state response for single phase systems.

CLO2: Explain the circuits using Laplace Transforms.

CLO3: Analyze three-phase circuits in the sinusoidal steady-state.

CLO4: Evaluate two-port network parameters, network functions.

CLO5: Analyze coupled circuits and its behavior.

CLO6: Design passive filters using constant K and M derived methods.

UNIT – I

Solution of First and Second order networks: Solution of first and second order differential equations for Series and parallel R-L, R-C, RLC circuits, initial and final conditions in network elements, forced and free response, time constants, steady state and transient state response for DC and AC excitations.

Electrical Circuit Analysis Using Laplace Transforms: Review of Laplace Transform, Analysis of electrical circuits using Laplace Transform for standard inputs, convolution integral, inverse Laplace transform, Frequency response (magnitude and phase plots).

UNIT – II

Poly Phase Systems: Advantages of 3-phase systems, generation of 3-phase voltages, phase sequence, star & delta connections, interconnection of 3-phase sources and loads, voltage, current & power in star & delta connected systems, analysis of 3-phase balanced circuit,

measurement of 3-phase power, 2 wattmeter method. Analysis of 3-phase unbalanced systems, star / delta transformation method, application of KVL and Mill man's method.

UNIT-III

Two Port Network and Network Functions: Two Port Networks, terminal pairs, relationship of two port variables, impedance parameters, admittance parameters, transmission parameters and hybrid parameters, interrelation of two port network, interconnections of two port networks, image parameters, Two-Port bridged – T, Ladder and Lattice networks. transformed network with initial conditions. Transfer function representation. Poles and Zeros - Network functions for the one port and two port - Poles and Zeros of network functions - Restrictions on pole and zero locations for driving point functions and transfer functions - Time domain behavior from the pole zero plot..

UNIT-IV

Coupled Circuits: Defining self and mutual inductance, coefficient of coupling, dot convention, Development of circuit equations in time domain and frequency domain, solution of coupled circuits, series and parallel connections of two coupled coils, tuned circuit analysis (single and double tuned)

Filters: Low pass, high pass, band pass & band reject filters - frequency response, constant K – and M derived – filters.

**ANALOG ELECTRONICS**

II B.Tech – III Semester (Code: 18EE303)

Lectures	4	Tutorial	0	Practical	0	Credits	3
Continuous Internal Assessment			50	Semester End Examination (3 Hours)			50

Prerequisites: Basic Physics**Course Objectives: To make the students**

CO1: Understand formation of PN junction Diode and applications of diode like Rectifiers, clippers and clampers.

CO2: To empower understand the design and working of BJT / FET amplifiers.

CO3: Analyze different feedback and oscillating circuits.

CO4: To give the idea about basics of Differential, Multi-stage and operational amplifiers.

CO5: Gain knowledge about Linear and Nonlinear applications of Op-amp.

Course Outcomes: Students will be able to

CLO1: Understand formation of PN junction Diode and applications of diode like Rectifiers, clippers and clampers.

CLO2: Understand the design and working of BJT / FET amplifiers.

CLO3: Analyze different feedback and oscillating circuits

CLO4: To give the idea about basics of Differential, Multi-stage and operational amplifiers.

CLO5: Gain knowledge about Linear and Nonlinear applications of Op-amp.

UNIT – I

Diode circuits: Open-circuited P-N Junction, Current Components in a p-n diode, I-V Characteristics, temperature Dependence of the I-V characteristic, Zener Diode.

Rectifiers: Half wave, full wave and Bridge Rectifiers without filter and with inductor filter Capacitor filter, L section & Π- section filters.

Clippers, Clampers: Positive and negative clippers - Positive and negative clampers.

UNIT – II

BJT circuits: NPN & PNP junction transistors, Transistor current components, CB Configuration, CE Configurations, CC configuration, BJT as a switch, BJT as an amplifier, BJT biasing circuits, Small signal equivalent circuits.

FET circuits: JFET, Pinch-off Voltage, volt-ampere characteristics, MOSFET structure and I-V characteristics, MOSFET as a switch, MOSFET as an amplifier, FET small signal model, CS / CD / CG configurations at low frequencies.

UNIT – III

Feedback Amplifiers: Feedback concept, Transfer Gain with Feedback, Negative feedback amplifiers and their characteristics.

Oscillators: Barkhausen criterion for sinusoidal oscillators, RC phase shift oscillator using BJT, General Form of Oscillator, Wien Bridge, Hartley, Colpitt's oscillators using BJT.

Differential, Multi-stage and operational amplifiers: Differential amplifier, multi-stage amplifiers, internal structure of an operational amplifier, ideal op-amp, non-idealities in an op-amp (Output offset voltage, input bias current, input offset current, slew rate, gain bandwidth product)

UNIT – IV

Linear applications of Op-amp: Idealized analysis of op-amp circuits. Inverting and non-inverting amplifier, instrumentation amplifier, integrator, differentiator, Voltage to current and current to voltage conversion.

Nonlinear applications of Op-amp: Basic comparator, Zero-crossing detector, Schmitt Trigger, Square-wave and triangular-wave generators, Absolute value output circuit, Peak detector, Sample and hold circuit, Precision rectifier.

**ELECTRICAL MACHINES – I
(DC MACHINES AND TRANSFORMERS)**

II B.Tech – III Semester (Code: 18EE304)

Lectures	4	Tutorial	1	Practical	0	Credits	4		
Continuous Internal Assessment			:	50	Semester End Examination (3 Hours)			:	50

Prerequisites: Basic Physics, Basic Mathematics**Course objectives:** To make the students

CO1: Understand the concept of magnetic circuits and electromagnetic force and torque.

CO2: Know the construction of dc generators and its characteristics.

CO3: Understand the speed control techniques and testing methods of dc motor.

CO4: Know the construction and operation of single and three phase Transformers.

Course outcomes: At the end of this course, students will be able to

CLO1: Explain the concepts of magnetic circuits.

CLO2: Describe the operation of dc generators and its characteristics.

CLO3: Analyze the speed control techniques and testing methods of dc motors.

CLO4: Analyze construction and operation of single and three phase Transformers.

UNIT-I**Magnetic Fields and Magnetic circuits:** Review of magnetic circuits-MMF, flux, reluctance, inductance; review of Ampere law and Biot- Savarts law. Visualization of magnetic fields produced by a bar magnet and a current carrying coil-through air and through a combination of iron and air.**Electromagnetic force and torque:** B-H curve of magnetic materials; energy stored in magnetic circuit; Field energy and mechanical force-mechanical energy-Multiple excited magnetic field systems-Forces /Torques in systems with permanent magnets. Examples of galvanometer coil-relay contact-lifting magnet-rotating element with eccentricity or saliency.**UNIT-II****DC Generators:** Basic construction of a DC machine-Principle and operation of DC Generator-Types of windings- Types of field excitations-EMF equation-Armature reaction-commutation-Characteristics of all types of DC Generators-Applications of DC Generators-Parallel operation of DC Generators.**UNIT-III****DC Motors:** Principle and operation of DC motor-Torque equation of DC motor-characteristics of all types of DC motors-starters and their design-speed control-Losses-Swinburne's test, load testing and back-to-back testing of DC machines.

UNIT-IV

Single phase Transformers: Principle, Construction and operation of single-phase transformer, equivalent circuit, phasor diagrams. Voltage Regulation, losses and efficiency. Testing's-OC and SC test, back-to back test, Separation of hysteresis and eddy current losses.

Three phase transformers: Construction, types of connection and their comparative features. Parallel operation. Auto- transformers. Magnetizing current, effect of non-linear B-H curve of magnetic core material. Scott connection, tap changing transformers. Cooling of transformers.

Text Books:

**ENGINEERING MECHANICS**

II B.Tech – III Semester (Code: 18CE003)

Lectures	4	Tutorial	1	Practical	0	Credits	4
Continuous Internal Assessment			50	Semester End Examination (3 Hours)			50

Prerequisites: Basic Physics**Course Objectives: To learn**

CO1: The concepts Force systems, free body diagrams, resultant of forces and equations of equilibrium, Supports and support reaction sand calculation of Centroid

CO2: The Concept of moment of inertia of plane figures, Laws and applications of friction

CO3: The Analysis of the truss and determination of axial forces by Method of Joints

CO4: Motion of a body and their relationships and application of D Alembert's principle in rectilinear and curvilinear motions

CO5: About Mass moment of inertia of material bodies, Plane motion of a body about a fixed axis

Course Outcomes: Students will be able to

CLO-1: Construct free body diagrams and use appropriate equilibrium equations, Calculate unknown forces in a plane by resolution of force and equilibrium equations

CLO-2: Locate Centroid of composite figures and determine moment of plane figures

CLO -3: Analyze the systems with friction

CLO-4: Determine the axial forces in the members of determinate truss. Calculation of acceleration, velocity and displacement and forces

CLO-5:Determine moment of inertia of material bodies, Calculation of angular displacement, velocity and angular acceleration of rotational bodies.

UNIT – I

Concurrent Forces in a Plane: Principles of statics – composition and resolution of forces – equilibrium of concurrent forces in a plane –Method of moments.

Parallel Forces in a Plane: Two parallel forces – general case of parallel forces in a plane – center of parallel forces – Centroids of composite plane figures and curves.

UNIT – II

Moments of Inertia of Plane Figures: Moment of inertia of a plane figure with respect to an axis in its plane – Moment of Inertia with respect to an axis perpendicular to the plane of the figure – Parallel axis theorem.

Friction: Characteristics of friction – problems involving dry friction, ladder friction and wedge friction..

UNIT – III

Rectilinear Translation: Kinematics of rectilinear motion – principles of dynamics – Differential equations of rectilinear motion D'Alemberts principle .

Curvilinear Translation: Kinematics of curvilinear motion – Differential equations of curvilinear motion – D'Alembert's principle.

UNIT – IV

Moments of Inertia of Material Bodies: Moment of inertia of rigid body – Moment of inertia of a lamina – Moments of inertia of three – dimensional bodies.

Rotation of a Rigid Body about a Fixed Axis: Kinematics of rotation – Equation of motion for a rigid body rotating about a fixed axis – D'Alembert's principle.

**TECHNICAL ENGLISH**

II B.Tech – III Semester (Code:18EL002)

Lectures	3	Tutorial	0	Practical	0	Credits	2
Continuous Internal Assessment			50	Semester End Examination (3 Hours)			50

Prerequisites: NIL**Course Objectives:** The course aims

CO1: At enhancing the vocabulary competency of the students

CO2: To introduce corrective measures to eliminate grammatical errors in speaking and writing

CO3: To learn writing as a process, including various invention heuristics (such as Brainstorming), gathering evidence, considering audience, drafting, revising, editing, and proofreading

CO4: Use grammatical, stylistic, and mechanical formats and conventions appropriate for a variety of purposes

CO5: Produce coherent, organized, readable prose for a variety of rhetorical situations

Course Outcomes: By the end of the course the student would be able to

CLO1: Make use of contextual clues to infer meanings of unfamiliar words from context

CLO2: Understand how to apply technical information and knowledge in practical documents for a variety of purposes

CLO3: Use grammatical, stylistic, and mechanical formats and conventions appropriate to various audiences and disciplines

CLO4: Build confidence to participate actively in writing activities (individually and in collaboration) that model effective technical communication in the workplace

UNIT-I

1.1 Vocabulary Development: Familiarizing Idioms & Phrases

1.2 Grammar for Academic Writing: Making Requests

1.3 Language Development: Using Transition & Link words

1.4 Technical Writing: Letter Writing & Email Writing

UNIT-II

- 2.1 Vocabulary Development: Analogous words
- 2.2 Grammar for Academic Writing: Tenses: Simple Past /Present Perfect, The Future: Predicting & Proposing
- 2.3 Language Development: Cloze tests
- 2.4 Technical Writing: Technical Reports

UNIT-III

- 3.1 Vocabulary Development: Abbreviations& Acronyms
- 3.2 Grammar for Academic Writing: Describing(People/Things/Circumstances) :
Adjectival & Adverbial groups
- 3.3 Language Development: Transco ding (Channel conversion from chart to text)
- 3.4 Technical Writing: Circular, Memos, Minutes of Meeting

UNIT-IV

- 4.1 Vocabulary Development: Corporate vocabulary
 - 4.2 Grammar for Academic Writing: Inversions & Emphasis
 - 4.3 Language Development: Reading Comprehension
 - 4.4 Technical Writing: Resume Preparation
-

BAPATLA ENGINEERING COLLEGE :: BAPATLA

(Autonomous)

ANALOG ELECTRONICS LAB

II B.Tech – III Semester (Code: 18EEL31)

Lectures	0	Tutorial	0	Practical	3	Credits	1
Continuous Internal Assessment			50	Semester End Examination (3 Hours)			50

Prerequisites: Basic of Electronic Devices and Circuits.

Course Objectives: To make the students

CO1: Able to get basic knowledge of the characteristics of diodes, clippers, rectifiers.

CO2: To get basic knowledge of transistor biasing and characteristics of BJT.

CO3: Able to get basic knowledge on characteristics of JFET and MOSFET

CO4: Able to learn characteristics of Multistage and Feedback amplifiers

CO5: To familiarize on LC and RC oscillators

CO6: Able to learn various Applications using OP-amp.

Course Outcomes: Students will be able

CLO1: Analyse the different applications of Diodes.

CLO2: Analyse BJT as an amplifier

CLO3: Apply JFET and MOSFET in different switching operations

CLO4: Design different types of multistage and feedback amplifiers

CLO5: Design different types of Oscillator circuits.

CLO6: Able to generate different basic waveforms using OP-amp.

LIST OF EXPERIMENTS:

1. Characteristics of PN Junction and Zener diode
2. Half wave rectifier with and without filter
3. Full wave rectifier with and without filter
4. Non-linear wave shaping – clippers
5. Characteristics of Transistor in Common Emitter configuration
6. Verification of Transistor Self Bias Circuit
7. Characteristics of Junction Field Effect Transistor
8. Characteristics of MOSFET
9. Two stage RC coupled Amplifier.
10. Design of voltage shunt feedback amplifier.
11. Design of RC phase shift oscillator.
12. Design of LC oscillator

BAPATLA ENGINEERING COLLEGE :: BAPATLA

(Autonomous)

13. Waveform generation using OP-AMP
14. Instrumentation amplifier using IC 741
15. Schmitt trigger using OP-AMP

Note: Minimum 10 experiments should be conducted.

CLO, PO and PSO Mapping:

MEASUREMENT AND INSTRUMENTATION LAB

II B.Tech – III Semester (Code: 18EEL32)

Lectures	2	Tutorial	0	Practical	3	Credits	2		
Continuous Internal Assessment			:	50	Semester End Examination (3 Hours)			:	50

Prerequisites: Mathematics, Basic Electrical Engineering.

Course Objectives: To make the students

CO1: To know the procedures for measuring values and errors of circuit elements of different ranges by various bridges.

CO2. To perform experiments to measure three phase power.

CO3. To design experiments for calibration of energy meter.

CO4. To know the industrial practices of Measuring earth resistance, dielectric strength of transformer oil & Testing of underground cables.

CO5. To understand the concept of transducers and digital meters.

Course Outcomes: Students will be able to

CLO1: Examine various methods to measure resistance, inductance and capacitance.

CLO2. Examine methods to measure 3- Φ active power and reactive power.

CLO3. Analyse the performance of various meters and to calibrate and test single phase energy meter.

CLO4. Execute testing of earth resistance and dielectric strength of oil.

CLO5. Analyse the concept of transducers and DSO.

Lectures/Demonstrations:

- 1. Concepts relating to measurements:** True value, Absolute error, Accuracy, Precision, Resolution, Drift, Hysteresis, Dead band, Sensitivity.
- 2. Instruments:** Classification of Instruments – Construction and principle of Permanent magnet moving coil – Moving iron – Extension range – Energy meter.
- 3. Bridges:** Measurement of R, L & C by using DC Bridges – AC Bridges. Transducers.
- 4. Digital Instruments:** Principle of operation of Digital Meters
- 5. Oscilloscope:** Basic operation – deflection mechanism – time base circuits – vertical amplifier- applications of CRO - DSO.

Lab experiments

1. Calibration and testing of Single phase energy meter by direct loading.
2. Energy meter calibration by phantom loading.
3. Measurement of Low resistance using Kelvin's double bridge.
4. Measurement of medium resistance using Wheatstone Bridge.
5. Measurement of C using a bridge technique as well as LCR meter.

BAPATLA ENGINEERING COLLEGE :: BAPATLA

(Autonomous)

6. Measurement of **L** using a bridge technique as well as LCR meter.
7. Measurement of Frequency using Wein's Bridge.
8. Measurement of frequency using CRO.
9. Measurement of three phase active and reactive power in three phase circuits.
10. Displacement measurement using LVDT.
11. Determination of parameters of B-H curve using Hysteresis loop tracer kit.
12. Measurement of earth resistance by earth tester & fall of potential method.
13. Measurement of dielectric strength of transformer oil by oil testing kit.
14. Measurement of high resistance and insulation resistance using Megger.
15. Usage of DSO to capture transients like a step change in R-L-C circuit.

Note: Minimum 10 experiments should be carried.

CO PO and PSO mapping:

**ELECTROMAGNETIC FIELDS**

II B.Tech – IV Semester (Code: 18EE401)

Lectures	4	Tutorial	0	Practical	0	Credits	3
Continuous Internal Assessment			50	Semester End Examination (3 Hours)			50

Prerequisites: Basic Physics, Basic Mathematics**Course Objectives:** To make the students

CO1: To acquire knowledge in Electromagnetic field theory

CO2: To provide a solid foundation in Electrostatics such as Dipole, Capacitance

CO 3: To attain familiarity in Boundary conditions and Magnetic field.

CO 4: To understand the relation between field theory and circuit theory.

CO 5: To identify the electromagnetic wave propagation in medium

Course Outcomes: Students will be able to

CLO1: Describe the fundamentals in Electromagnetic field theory

CLO2: Explain basics in Electrostatics such as Dipole, Capacitance

CLO3: Distinguish electric and magnetic properties of material media and Familiarity in Boundary conditions and Magnetic field

CLO4: Analyze three-dimensional vector differential and integral concepts to solve real life electromagnetic field problems

CLO5: Describe the electromagnetic wave propagation in medium

UNIT – I

Electrostatics I: Introduction to Rectangular, Cylindrical and Spherical Coordinate systems. The experimental law of coulomb, Electric field intensity, Field due to a continuous volume charge distribution, Field of a line charge, sheet of charge. Electric Flux Density, Gauss's law, Applications of Gauss law, Divergence, Maxwell's First equation (Electrostatics), Energy expended in moving a point charge in an electric field, Definition of potential and potential difference. The potential field of a point charge, system of charges, potential gradient.

UNIT – II

Electrostatics II: Electric field intensity due to dipole and Energy density in electrostatic field. The nature of dielectric materials, boundary conditions for perfect dielectric materials. Capacitance. Several capacitance examples. Capacitance of a two-wire line. Derivations of Poisson's and Laplace's equations, Examples of the solution of Laplace's equation. Current and current density, continuity of current, conductor properties and boundary conditions

UNIT – III

Steady Magnetic Field: Biot- Savart Law, Ampere's Circuital Law, Magnetic Flux and Magnetic Flux Density, The scalar and vector magnetic potentials. Magnetic Forces and Materials: Force on a moving charge, Force on a differential current element, Force between differential current elements, Force and torque on a closed circuit, The nature of magnetic materials, Magnetization and Permeability. Magnetic boundary conditions. Potential energy in magnetic fields.

UNIT – IV

Time Varying Fields and Maxwell's Equations: Faraday's law, Displacement current, Maxwell's equations in point form, integral form.

Concept of Uniform Plane Wave: Wave propagation in free space, dielectrics. Poynting theorem and wave power. Propagation in good conductors: skin effect. Reflection of uniform plane waves at normal incidence.

TEXT BOOKS:

**DIGITAL ELECTRONICS**
II B.Tech – IV Semester (Code: 18EE402)

Lectures	4	Tutorial	1	Practical	0	Credits	4
Continuous Internal Assessment			50	Semester End Examination (3 Hours)			50

Prerequisites: Basic Physics, Basic Mathematics

Course Objectives: In this course students are able to

CO1: Have a thorough understanding of the fundamental concepts and techniques used in digital electronics, and Number conversions;

CO2: Understand Boolean Algebra and able to minimize boolean expressions by applying boolean algebra, K-Map method and Tabulation Method with "don't care" conditions.

CO3: to analyze and design various combinational logic circuits.

CO4: Use basic flip-flops SR, JK, D and T; analyze and design synchronous sequential circuits.

CO5: Have a understanding of the fundamental concepts about various terms and circuits of A/D and D/A converters

CO6: Understand Registers and Counters and Memories and design Programmable Logic Devices.

Learning Outcomes: After the completion of this course the students are expected to be able to:

CLO1: Describe fundamental concepts and techniques used in digital electronics, and able to perform Number conversions, Complements; able to describe various Boolean algebraic rules and laws.

CLO2: Simplify Boolean function using Boolean algebraic rules and laws, K-Map and Tabulation Method.

CLO3: Analyze and design of various Combinational logic circuits.

CLO4: Analyze functionalities of Latches and Flip-Flops; able to Analyze and design of Sequential logic circuits.

CLO5: learn about various terms of A/D and D/A converters

CLO6: Analyze and design of Registers, Counters, types of memories and PLD's.

UNIT-I

Fundamentals of Digital Systems and Logic families: Digital signals, digital Circuits, AND, OR, NOT, NAND, NOR and Exclusive-OR operations, Boolean algebra, examples of IC gates, number systems-binary, signed binary, Octal, hexa decimal number, binary arithmetic, one's and two's complements arithmetic, codes: Excess-3 and gray code, error detecting and correcting codes, characteristics of digital ICs, digital logic families, TTL, Schottky TTL and CMOS logic, interfacing CMOS and TTL, Tri-state logic.

UNIT-II

Combinational Digital Circuits: Standard representation for logic functions, K-map representation, simplification of logic functions using K-map, don't care conditions, Adders, Subtractors, BCD arithmetic, carry look ahead adder, serial adder, Multiplexer, De-Multiplexer, digital comparator, parity checker/ generator, code converters, priority encoders, decoders/drivers for display devices, Q-M method of function realization.

UNIT-III

Sequential circuits and systems : A1-bit memory, the circuit properties of Bi stable latch, the clocked SR flip flop, J-K, T and D- type flip flops, applications of flip flops, shift registers, applications of shift registers, ring counter, sequence generator, ripple (Asynchronous) counters, synchronous counters, counters design using flip flops, applications of counters.

UNIT-IV

A/D and D/A Converters: Digital to analog converters: weighted resistor/converter, R-2R Ladder D/A converter, specifications for D/A converters, sample and Hold Circuit, analog to digital converters: quantization and encoding, parallel comparator A/D converter, successive approximation A/D converter, counting A/D converter, dual slope A/D converter, A/D converter using voltage of frequency and voltage to time conversion, specifications of A/D converters.

Semi-conductor memories and Programmable logic devices: Memory organization and operation, expanding memory size, classification and characteristics of memories, read only memory (ROM), read and write memory (RAM), ROM as a PLD, Programmable logic array, Programmable array logic.

**ELECTRICAL MACHINES – II
(INDUCTION MOTORS AND SYNCHRONOUS MACHINES)**

II B.Tech – IV Semester (Code: 18EE403)

Lectures	4	Tutorial	1	Practical	0	Credits	4
Continuous Internal Assessment			50	Semester End Examination (3 Hours)			50

Prerequisites: Basic Physics, Basic Mathematics**Course objectives:** To make the students

CO1: Understand the construction, operation and performance of three phase induction machines.

CO2: Gain knowledge about construction, operation and application of single phase induction machines.

CO3: Understand the construction, operation and performance of Alternators

CO4: Gain knowledge about construction, operation and performance of synchronous motors.

Course outcomes: At the end of this course, students will be able to

CLO1: Demonstrate construction, operation and performance of three phase induction machines

CLO2: Explain construction, operation and application of single phase induction machines.

CLO3: Analyze operation and performance of Alternators

CLO4: Analyze operation and performance of synchronous motors.

UNIT-I**Induction machines:** Construction-Types (squirrel cage and slip ring)-rotating magnetic field in two phase & three phase systems-Torque equation-torque slip characteristics- equivalent circuit-phasor diagram-losses and efficiency- circle diagrams-starting methods and speed control-Induction generator.**UNIT-II****Single- phase Induction motors:** Constructional features-double revolving field theory-equivalent circuit-determination of parameters-split phase-capacitor start and run-shaded pole motors-characteristics and their applications.**UNIT-III****Synchronous generators:** Construction-EMF equation with winding factors-equivalent circuit and phasor diagram-armature reaction-synchronous impedance-voltage regulation-methods of determining regulation –EMF and ZPF methods-salient pole machine-two reaction theory-power angle characteristics-parallel operation of alternators-synchronization of alternators.**UNIT-IV****Synchronous motors:** Theory of operation-starting methods-phasor diagrams-variation of current and power factor with excitation-Power circles-V and inverted V curves-hunting and its prevention-synchronous condenser and its applications.

**SIGNALS AND SYSTEMS**

II B.Tech – IV Semester (Code: 18EE404)

Lectures	4	Tutorial	0	Practical	0	Credits	3
Continuous Internal Assessment			50	Semester End Examination (3 Hours)			50

Prerequisites: Basic Physics, Basic Mathematics**Course objectives:** To make the students

CO1: Understand the concepts of continuous time and discrete time systems.

CO2: Gain knowledge about LTI systems

CO3: Analyze systems in frequency domain.

CO4: Understand sampling theorem and its implications.

Course outcomes: At the end of this course, students will be able to

CLO1: Explain the concepts of continuous time and discrete time systems.

CLO2: Analyze the behavior of continuous and discrete time LTI systems.

CLO3: Analyze systems in frequency domain.

CLO4: Demonstrate sampling theorem and its implications.

UNIT-I

INTRODUCTION TO SIGNALS AND SYSTEMS: Signals and systems as seen in everyday life, and in various branches of engineering and science. Signal properties: periodicity, absolute integrability, determinism and stochastic character. Some special signals of importance: the unit step, the unit impulse, the sinusoid, the complex exponential, some special time-limited signals; continuous and discrete time signals, continuous and discrete amplitude signals. System properties: linearity: additivity and homogeneity, shift-invariance, causality, stability, realizability. Examples.

UNIT-II

BEHAVIOR OF CONTINUOUS AND DISCRETE-TIME LTI SYSTEMS: Impulse response and step response, convolution, input-output behavior with a periodic convergent inputs, cascade interconnections. Characterization of causality and stability of LTI systems. System representation through differential equations and difference equations. State-space Representation of systems. State-Space Analysis, Multi-input, multi-output representation. State Transition Matrix and its Role. Periodic inputs to an LTI system, the notion of a frequency response and its relation to the impulse response.

UNIT-III

FOURIER AND Z - TRANSFORMS: Fourier series representation of periodic signals, Waveform Symmetries, Calculation of Fourier Coefficients. Fourier Transform, convolution/multiplication and their effect in the frequency domain, magnitude and phase response, Fourier domain duality. The Discrete- Time Fourier Transform (DTFT) and the Discrete Fourier Transform (DFT). Parseval's Theorem. The z-Transform for discrete time signals and systems, system functions, poles and zeros of systems and sequences, z-domain analysis.

UNIT-IV

SAMPLING AND RECONSTRUCTION: The Sampling Theorem and its implications. Spectra of sampled signals. Reconstruction: ideal interpolator, zero-order hold, first-order hold. Aliasing and its effects. Relation between continuous and discrete time systems. Introduction to the applications of signal and system theory: modulation for communication, filtering, feedback control systems.

**BIOLOGY FOR ENGINEERS**

II B.Tech-IV Semester (18CE002)

Lectures	4	Tutorial	0	Practical	0	Credits	3
Continuous Internal Assessment			50	Semester End Examination (3 Hours)			50

Course Objectives: To learn

CO1: To describe the bio molecules present in living organisms

CO2: to give awareness about the sterilization methods

CO3: it explains the importance of plants in the ecosystem

CO4: it gives an idea about the classifications of organisms

CO5: It explores the harmful and beneficial role of bacteria

Course Outcomes: Students will be able to

CLO1: Explain the Morphology and chemical composition of the cell and function of each organelle present in the cell with the help of microscope.

CLO2: Explain the process of human physiological system and its cell functioning.

CLO3: Explain the importance of microbiology and immunological science to know the reactions of our body.

CLO4: Discuss the biological science related to the different disciplinary areas.

CLO5: Explain the importance of genetics and how bioscience is related to other technical areas.

UNIT-I

Introduction to biology: Classification of microorganisms- Two kingdom, Three kingdom & Five kingdom; Prokaryotic cell structure (Bacteria); Eukaryotic cell structure (Plant & Animal cells); Differences between Prokaryotes and Eukaryotes.

UNIT-II

Bacterial Growth Phases; Nutrition in Bacteria; Types of media; Bacteria - Binary Fission, Endospore Formation; Plant & Animal cell Division - Mitosis & Meiosis.

UNIT-III

Structure of DNA (Watson & Crick model); Types of DNA & Function of DNA; Structure of RNA & types of RNA; Differences between DNA & RNA. Types of proteins & structure of proteins.

UNIT-IV

Sterilization methods - Physical methods : Heat, Filtration, radiation; Chemical methods: Phenolics, alcohols, aldehydes, halogens, heavy metals, sterilizing gases, dyes. Economic importance of bacteria (Harmful & Beneficial aspects); Plants in Primary Health care - Tulasi, piper longum, Myrobalan, Aloe vera, Turmeric.

**POWER SYSTEM – I
(GENERATION and TRANSMISSION)**

II B.Tech-IV Semester (18EE406)

Lectures	4	Tutorial	1	Practical	0	Credits	4
Continuous Internal Assessment			50	Semester End Examination (3 Hours)			50

Course Objectives: To make the students**CO1:** Understand the economical aspects and choice of power stations and units**CO2:** Understand the significance of conventional and non-conventional energy resources and their operation**CO3:** Calculate transmission line parameters.**CO4:** Discuss the theory and mechanical design of transmission lines and introduce various types of insulators and their testing.**Course Outcomes:** Students will be able to**CLO1:** Explain the economical aspects and choice of power stations and units**CLO2:** Analyze the significance of conventional and non-conventional energy resources and their operation.**CLO3:** Analyze the performance of short, medium and long transmission lines and identify the transmission system which requires minimum volume of conductor materials.**CLO4:** Classify the types of insulators, testing of insulators and calculation of string efficiency.**Course Syllabus:****UNIT – I**

Economical Aspects: Economics of generation - factors affecting cost of generation - Definitions: load factor – diversity factor – plant use factor - reduction of cost by inter connected stations. Power factor considerations – causes of low power factor – methods of improving power factor – phase advancing and generation of reactive KVAR – most economical power factor for constant KW load and constant KVA type loads. Tariff: Characteristics of Tariff – types of Tariff.

Choice of power stations and units: Types of power stations – choice of generation - size of generator units – load duration curve – effect of variable load on plant operation and design.

UNIT-II

Thermal Power: Block Diagram of Thermal Power Station (TPS), Brief Description of Thermal Power system Components

Hydro Power: Selection of Site, Classification, Layout, Description of Main Components.

Nuclear Power: Nuclear Fission and Chain Reaction-Principle of Operation of Nuclear Reactor.- Description of Main Components.

Solar Power Generation: Role and Potential of Solar Energy Options, Principles of Solar Radiation, Solar Energy Collectors, Different Methods of Energy Storage – PV Cell- V-I Characteristics.

Wind Power Generation: Role and potential of Wind Energy Options, Horizontal and Vertical Axis Wind Mills- Performance Characteristics-Pitch & Yaw Controls – Economic Aspects.

UNIT-III

Transmission Line Parameters: Calculation of inductance for single phase and three phase, single and double circuit lines, concept of GMR & GMD, symmetrical and asymmetrical conductor configuration with and without transposition. Calculation of capacitance for 2 wire and 3 wire systems, effect of ground on capacitance, capacitance calculations for symmetrical and asymmetrical single and three phase, single and double circuit lines.

Modeling of Transmission Lines: Classification of Transmission Lines - Short, medium and long line and their model - representations - Nominal-T, Nominal-Pie and A, B, C, D Constants. Mathematical Solutions to estimate regulation and efficiency of all types of lines- Long Transmission Line-Rigorous Solution, evaluation of A,B,C,D Constants, Interpretation of the Long Line Equations – Representation of Long lines – Equivalent T and Equivalent π , Numerical Problems. – Surge Impedance and surge Impedance loading - wavelengths and Velocity of propagation – Ferranti effect, Charging current, Need of Shunt Compensation.

UNIT-IV:

Insulators, Corona: Types of Insulators- String efficiency and Methods for improvement– Voltage Distribution, Calculation of string efficiency- Capacitance grading and Static shielding. Corona - Description of the phenomenon, factors affecting corona, critical voltages and power loss, Radio Interference.

Mechanical Design of Lines: Sag and Tension Calculations with equal and unequal heights of towers, Effect of Wind and Ice on weight of Conductor - Stringing chart and sag template and its applications.

DIGITAL ELECTRONICS LAB

II B.Tech – IV Semester (Code: 18EEL41)

Lectures	0	Tutorial	0	Practical	3	Credits	1
Continuous Internal Assessment		50	Semester End Examination (3 Hours)			50	

CO1: To analyse the characteristics of Diodes, Transistors and FET in different biasing conditions.

CO2: To design feedback amplifiers, oscillators using transistors and wave form generating using op-amp.

CO3: To design and verify different types of logic gates using universal gates, combinational logic circuits and code converters.

CO4: To design multiplexers, demultiplexers and counter circuits using logic gates.

CO5: To design and test applications of 555 timer circuits and D/A converters.

Course Learning Outcomes: Students will be able to

CLO1: Analyse the characteristics of Diodes, Transistors and FET in different biasing conditions.

CLO2: Design feedback amplifiers, oscillators using transistors and wave form generating using op-amp. amplifiers.

CLO3: Design different types of logic gates using universal gates, combinational logic circuits and code converters.

CLO4: Understand the design methods of multiplexers, demultiplexers and counter circuits using logic gates.

CLO5: Design and test applications of 555 timer circuits and D/A converters

LIST OF EXPERIMENTS

1. Realization of Logic Gates using Discrete Components
2. Realization of Logic Gates using Universal Building Blocks.
3. Design of Combinational Logic Circuits like half-adder, Full adder, Half-subtractor and Full-subtractor
4. Design of Code converters.
5. Design of combinational circuit for BCD to decimal conversion to drive 7-segment display driver.

BAPATLA ENGINEERING COLLEGE :: BAPATLA

(Autonomous)

6. Design of 4X1 Multiplexer and 1x4 Demultiplexer.
7. Four-bit parity generator and comparator circuits.
8. Realization of RS-JK & D flip-flop using logic gates.
9. Design of Shift Registers.
10. Design of Ring Counter and Johnson Counter using Flip Flops
11. Design of Asynchronous counter, Mod counter, Up counter, Down counter and Up/Down counter using Flip Flops
12. Design of Synchronous Counter, Mod Counter, Up counter, Down counter and Up/Down counter using Flip Flops.
13. Design of Sequence Generators.
14. Design and testing of mono stable and Astable Multivibrators using 555 timers.
15. Design a 4-bit R-2R ladder type of digital to analog converter.

Note: Minimum 10 experiments should be conducted.

ELECTRICAL MACHINES LAB - I

II B.Tech – IV Semester (Code: 18EEL42)

Lectures	0	Tutorial	0	Practical	3	Credits	1
Continuous Internal Assessment			50	Semester End Examination (3 Hours)			50

Course Objectives: To make the students

- CO1: To develop experimental setups for studying the performance and operation of DC Generators and DC motors
- CO2: To perform Direct and Indirect tests of various DC motors.
- CO3: Acquire hands on experience of conducting various tests on Transformers and obtaining their Performance indices using standard analytical as well as graphical methods.
- CO4: To develop experimental setups for studying the performance and operation of Transformers.

Course Outcomes: Students will be able to

- CLO1: Analyze the performance characteristics of DC Generators.
- CLO2: Asses the performance of the given DC motors
- CLO3: Understand and explain the principle of operation and performance of transformer.
- CLO4: Calculate load of transformer for a given application and then select the suitable specification of electrical machine

LIST OF EXPERIMENTS

1. Open circuit characteristics of separately excited / self-excited D.C shunt generator
2. Load test on D.C Shunt Generator
3. Load test on D.C series generator
4. Load test on D.C Compound Generator
5. Brake test on D.C Shunt Motor
6. Speed control of DC Shunt motor
7. Swinburne's Test on a D.C Shunt Machine.
8. Retardation test on D.C. Machine.
9. Field test on two identical DC series machine

BAPATLA ENGINEERING COLLEGE :: BAPATLA

(Autonomous)

10. Hopkinson's test on Two Identical D.C Machines
11. OC & SC tests on single - phase transformer
12. Load test on single - phase transformer
13. Scott Connection of Transformers
14. Parallel Operation of Two Single - Phase Transformers
15. Sumpner's test on Two single-phase Transformers
16. Separation of losses in single – phase transformer

Note: Minimum 10 experiments should be carried out.

**DATA STRUCTURES AND ALGORITHMS LAB**

II B.Tech – IV Semester (Code: 18ITL01)

Lectures	2	Tutorial	0	Practical	3	Credits	2
Continuous Internal Assessment			50	Semester End Examination (3 Hours)			50

Prerequisites: Problem Solving with Programming.**Course Objectives:** To make the students

CO1: To impart the basic concepts of data structures and algorithms.

CO2: To understand concepts about searching and sorting techniques

CO3: To understand basic concepts about stacks, queues, lists, trees and graphs.

CO4: To enable them to write algorithms for solving problems with the help of fundamental data structures.

Course Outcomes: Students will be able to

CLO1: Implement ADT's of different types of linked lists and applications.

CLO2: Implement stack and queue ADT's using arrays and their applications.

CLO3: Construct and implement different tree algorithms.

CLO4: Implement various hashing techniques and Graph traversal methods.

UNIT - I

(4 Periods)

Introduction: Importance of Data Structures, Classification of Data Structures.**Stacks and Queues:** Stack ADT and its operations, Stack Applications: Evaluation of Postfix.Queue ADT, Operations on Queue ADT.**UNIT - II**

(5 Periods)

Linked Lists: Singly linked lists: Representation in memory, Algorithms of several operations: Traversing, Searching, Insertion , Deletion from linked list. Double Linked List-Operations. SortingsTechniques : Quick sort, Merge Sort.**UNIT - III**

(3 Periods)

Trees: Preliminaries, Binary Trees, Expression trees, The Search Tree ADT-implementations.**UNIT - IV**

(4 Periods)

Graphs: Basic Terminologies and Representations, Graph search and traversal algorithms: BFS and DFS.

LIST OF EXPERIMENTS:

1. Write a program to perform the following operations on Array List.
 - a) Creation b) Insertion c) Deletion d) Search e) Display.
2. Write a program to implement the following
 - a) stack using array b) queue using array
3. Write a program to implement the following using stack.
 - a) infix to postfix conversion b) postfix evaluation
4. Write a program to implement circular queue and perform the following
 - a) enqueue b) dequeue
5. Write a program to perform the following operations on Single Linked List.
 - a) Creation b) Insertion c) Deletion d) Search e) Display
6. Write a program to perform the following operations on Circular Single Linked List.
 - a) Creation b) Insertion c) Deletion d) Search e) Display
7. Write a program to perform the following operations on Doubly Linked List.
 - a) Creation b) Insertion c) Deletion d) Search e) Display
8. Write a program to implement the following sorting techniques
 - a) Quick Sort b) Merge Sort c) Shell Sort
9. Write a program to demonstrate Binary Expression tree.
10. Write a program to create Binary tree and display their traversals.

**POWER SYSTEM – II**

III B.Tech-V Semester (18EE501)

Lectures	4	Tutorial	1	Practical	0	Credits	4
Continuous Internal Assessment			50	Semester End Examination (3 Hours)			50

Prerequisites: Circuit Theory, Network Analysis**Course Objectives:** To make the students

CO1: Analyze copper efficiencies of various supply systems and substation practice

CO2: Describe types of underground cables and explains the representation of power system components

CO3: Understand the symmetrical components and networks and analysis of Unsymmetrical faults.

CO4: Understand travelling waves and transmission lines over voltages.

Course outcomes: At the end of this course, students will be able to

CLO1: Explain all types of DC and AC distribution systems, classification of substations.

CLO2: Analyze performance of underground cables and solve all power system problems using per unit system.

CLO3: Analyze all the power system networks with symmetrical and asymmetrical fault analysis

CLO4: Classify the types of insulators, testing of insulators and calculation of string efficiency.

UNIT – I

Distribution: Comparison of copper efficiencies between DC, AC Single phase, 3-phase, 3-wire & 4-wire systems, calculation of voltage regulation in case of non-uniform and uniformly distributed loads on feeders, feeders fed at one end and both ends, ring feeders without and with interconnections, choice of voltage and frequency, Kelvin's law for most economical cross section and most economical current density and its limitations.

Substation Practice: Classification of substations, indoor and outdoor substations, bus-bar arrangements – single bus-bar, sectionalized single bus-bar, main and transfer bus-bar system, sectionalized double bus-bar system, ring mains, group switching,

UNIT – II

Underground Cables: Types of cables, laying of cables, insulation resistance, electric stress and capacitance of single core cable, use of inter sheath, capacitance grading, capacitance of three core belted type cable, stress in a three-core cable, sheath effects,

BAPATLA ENGINEERING COLLEGE :: BAPATLA

(Autonomous)

currents in bonded sheaths, electrical equivalent of sheath circuit, thermal characteristics of cables.

Representation of power system Components: Modeling of power system components for system studies: transmission lines, two-winding transformers with nominal & off-nominal ratio tap settings, three-winding transformers, phase shifting transformers. One line diagram, Impedance and Reactance diagrams, advantages of Per Unit Computations, per unit quantities, changing the base, selection of base, per-unit impedances of three winding transformers.

UNIT-III

Symmetrical Faults: Transients in RL series circuit, short-circuit currents and reactance's of synchronous machines, internal voltages of loaded machines under transient conditions, selection of circuit breakers. Formation of Bus Impedance matrix by using Z-Bus building algorithm. Analysis of symmetrical faults using bus impedance matrix

Symmetrical components and Networks: Introduction – operator 'a', resolution of three unbalanced phasor into symmetrical components, power in terms of symmetrical components. Unsymmetrical series impedance - sequence impedances and sequence networks of unloaded generators, circuit elements. Positive, negative and zero sequence networks.

Unsymmetrical Faults: Single line to ground, line to line and double line to ground faults on an unloaded alternator and on power systems.

UNIT-IV

Travelling waves on Transmission lines and over voltages: Wave equation, Surge impedance and wave velocity, Reflection and Refraction of waves, Typical cases of line terminations, forked line, successive Reflection, Bewley Lattice diagram, Attenuation and Distortion, Arcing grounds, Capacitance switching and Current chopping.

Over Voltages: Lightning Phenomenon, over voltages due to lightning, Switching Over voltages, protection of systems against surges and Surge Arresters.

CONTROL SYSTEMS

III B.Tech-V Semester (Code: 18EE502)

Lectures	4	Tutorial	1	Practical	0	Credits	4
Continuous Internal Assessment		50	Semester End Examination (3 Hours)				50

Prerequisites: Mathematics, Physics, Network Theory

Course Objectives: To make the students

CO1: To make the students interpret different physical systems, construct mathematical models and reduce a block diagram of multiple subsystems to a signal block.

CO2: To make the students employ time domain analysis to predict and diagnose transient performance parameters of the system for standard input functions.

CO3: To make the students analyze the system stability using complex domain.

CO4: To make the students formulate different types of analysis in time and frequency domain.

CO5: To make the students Identify the needs of different types of controllers and compensator to ascertain the required dynamic response from the system.

CO6: To make the students assess controllability and observability of control systems.

Course Outcomes: Students will be able

CLO1: Explain the concepts of classification of control systems, develop of mathematical models from schematics of physical system and reduce a block diagram of multiple subsystems to a signal block

CLO2: Describe time domain analysis and predict the performance parameters of the system for standard input functions.

CLO3: Compute stability of the system in complex domain.

CLO4: Analyze stability of the system in time and frequency domain.

CLO5: Identify the needs of different types of controllers and compensator to ascertain the required dynamic response from the system.

CLO6: Assess controllability and observability of control systems.

Course Syllabus:

UNIT – I

Introduction: Basic concept of control system. Types of feedback control systems and its effect on overall gain – Linear time invariant, time variant systems and nonlinear control systems

BAPATLA ENGINEERING COLLEGE :: BAPATLA

(Autonomous)

Modeling of LTI Systems: Mathematical models and Transfer functions of Physical systems. Block diagram representation of control systems – signal flow graph.

UNIT – II

Time Domain Analysis: Standard test signals – step, ramp, parabolic and impulse response function – Time response of first order and second order systems to standard test signals - steady state response – error Constants.

Stability Analysis in the Complex Plane: Absolute, relative, conditional, bounded input – bounded output, zero input stability, conditions for stability, Routh –Hurwitz criterion.

UNIT – III

Root Locus Technique: Introduction - Construction of Root Locus, Introduction to Controller Design using Root-loci method of feedback controller design,

Frequency Domain Analysis: Introduction – correlation between time and frequency responses – Polar plots – Bode plots – Nyquist plots.

UNIT – IV

Design of controllers and compensator: Effect of adding poles and zeros on overshoot, rise time, band width. Introduction to Application of Proportional, Integral and Derivative Controllers, Lead and Lag compensation in designs.

State space analysis: Concepts of state variables and state models – diagonalization – solution of state equations – Concepts of controllability and Observability

**POWER ELECTRONICS**

III B.Tech – V Semester (Code: 18EE503)

Lectures	4	Tutorial	1	Practical	0	Credits	4
Continuous Internal Assessment			50	Semester End Examination (3 Hours)			50

Prerequisites: Basic Electric Engineering, Semiconductor Physics and Nano Materials**Course Objectives:** To make the students

CO1: Understand the Power Electronics devices its protection.

CO2: Analyze AC to DC Conversion circuits.

CO3: Analyze the operation of DC-DC choppers and AC Voltage controllers.

CO4: Analyze the operation of inverters PWM techniques.

Course outcomes: At the end of this course, students will be able to

CLO1: Understand the transistor, thyristor devices its protection.

CLO2: Design and analyze AC to DC Conversion circuits.

CLO3: Design and analyze the operation of DC-DC choppers and AC Voltage controllers.

CLO4: Design and analyze the operation of inverters PWM techniques.

UNIT-I**Introduction to Power Electronics devices and protection:** Thyristor family devices, principle of operation, Snubber designs, selection and protection, Firing circuits, Commutation, MOSFET, IGBT operation, principles and ratings.**UNIT-II****AC to DC conversion:** Uncontrolled, semi-controlled, fully controlled and dual converters in single-phase and three phase configurations operation with R, R-L, back emf load, Issues of line current harmonics, Power factor, Distortion factor of ac to dc converters and effect of source inductance.**UNIT-III****Inverters:** Basics of dc to ac conversion, inverter circuit configurations and principle of operation, VSI and CSI, single and three-phase configurations, Single, Multiple, Square wave and sinusoidal PWM control methods and harmonic control.

UNIT-IV

DC-DC Converters and AC-AC Converters: Introduction to dc-dc conversion, various topologies, buck, boost, buck-boost converters. Introduction to ac to ac conversion, single-phase and three-phase ac voltage controller circuit configuration with R load Analysis. Cyclo-converters: single-phase, three-phase to single-phase circuit configuration.

**MICROPROCESSORS & MICROCONTROLLERS**

III B.Tech – V Semester (Code: 18EE504)

Lectures	4	Tutorial	0	Practical	0	Credits	3
Continuous Internal Assessment			50	Semester End Examination (3 Hours)			50

Prerequisites: Digital Electronics**Course Objectives:** To make the students

CO1: Understand the Architecture of 8085 and 8086 microprocessor.

CO2: Learn the detail aspects of I/O and Memory Interfacing circuits.

CO3: Study the Architecture of 8051 microcontroller.

CO4: Study about 8051 micro controller interfacing with various applications.

Course Outcomes: At the end of this course students will be able to

CLO1: Write programs in 8086 microprocessor using assembly language Programming.

CLO2: Design various applications by interfacing programmable I/O devices.

CLO3: Describe the architecture of 8051 microcontroller and write assembly language programs.

CLO4: Develop various applications using 8051 microcontrollers.

UNIT – I

8086 Microprocessor: Introduction to 8085 Microprocessor and its Architecture, 8086 Microprocessor Family, 8086 Internal Architecture, Pins and Signals, Instruction set and Assembler directives. Introduction to Programming: 8086 Assembly Language Programming, Implementing standard Program Structures, Strings, Procedures and Macros.

UNIT – II

Interfacing Devices & Applications: 8255 Programmable Peripheral Interface, keyboard interfacing and 7-segment display interfacing, 8279 Programmable Keyboard Display Interface 8253 Programmable Interval Timer, 8259 Programmable Interrupt Controller, Direct Memory Access (DMA) and 8257 DMA Controller, 8251 and serial I/O and Data Communication.

UNIT – III

8051 Microcontroller: Architecture of 8051, Special Function Registers, I/O Ports, Memory Organization, Addressing modes, Instruction set, Assembly Language Programming, Assembly Code for Arithmetic and Logic Operations.

UNIT – IV

Microcontroller Interfacing & Applications: Programming 8051 Timers, Timer programming, Serial Port Programming, Interrupts Programming, LCD and Keyboard Interfacing, ADC, DAC and Sensor Interfacing, External Memory Interface, Stepper Motor and Waveform generation.

**INDIAN TRADITIONAL KNOWLEDGE**

B.Tech – V Semester (Code: 18HU002)

Lectures	3	Tutorial	0	Practical	0	Credits	0
Continuous Internal Assessment			50	Semester End Examination (3 Hours)			50

Pre Requisites: NIL

Course Outline: This Course is to facilitate the students with the concepts of Indian traditional knowledge and to make them understand the Importance of roots of knowledge system.

Course Objectives:

CO1. The course aims at imparting basic principles of thought process, reasoning and inferencing. Sustainability is at the core of Indian traditional knowledge systems connecting society and nature.

CO2. Holistic life style of Yogic-science and wisdom capsules in Sanskrit literature are also important in modern society with rapid technological advancements and societal disruptions.

CO3. The course focuses on introduction to Indian knowledge system, Indian perspective of modern scientific world-view and basic principles of yoga and holistic healthcare system.

Course Learning Outcomes: After completion of the course, students will be able to:

CLO1. Understand the concept of Indian Traditional knowledge and its importance

CLO2. Compare the Indian traditional knowledge Systems with Other Global systems. .

CLO3. Understand the concept of yoga and its correlations to science.

CLO4. Study various case studies related to traditional knowledge.

UNIT I

Basic Structure of Indian Knowledge System (i) वेद, (ii) उपवेद (आयुर्वेद, धनुर्वेद, गन्धर्वेद, स्थापत्य आदि) (iii) वेदांग (शिक्षा, कल्प, निरुत, व्याकरण, ज्योतिष छंद), (iv) उपाङ्ग (धर्म शास्त्र, मीमांसा, पुराण, तर्कशास्त्र)

UNIT II**Modern Science and Indian Knowledge System**

8 Periods

Introduction to traditional knowledge: Define traditional knowledge, nature and characteristics, scope and importance, kinds of traditional knowledge, the physical and

social contexts in which traditional knowledge develop, the historical impact of social change on traditional knowledge systems. Indigenous Knowledge (IK), characteristics, traditional knowledge Vs indigenous knowledge, traditional knowledge Vs western knowledge, traditional knowledge Vs formal knowledge

UNIT III

Yoga and Holistic Health care

8 Periods

Science of Yoga, Yoga as a tool for healthy Life style, 8 limbs of Yoga (Yama, Niyama, Aasana, Pranayama, Pratyahara, Dharana, Dhyana, Samadhi).

UNIT IV

Case Studies

8 periods

Traditional knowledge in different sectors: Traditional knowledge and engineering, Traditional medicine system, TK and biotechnology, TK in agriculture, Traditional societies depend on it for their food and healthcare needs, Importance of conservation and sustainable development of environment.

**PROFESSIONAL ETHICS AND HUMAN VALUES**

III B.Tech – V Semester (Code: 18EE506)

Lectures	4	Tutorial	0	Practical	0	Credits	3
Continuous Internal Assessment			50	Semester End Examination (3 Hours)			50

Course Objectives (COs): To make the student

- CO1:** Understand the importance of ethics and human values in life and society, moral awareness.
- CO2:** Apply ethics to engineering profession, understand moral development, and importance of ethical theories.
- CO3:** Understand the Engineers as responsible experimenters, assessment of safety and risk, employee rights and professional rights.
- CO4:** Shape themselves into valuable professionals, follow ethics and are able to solve their ethical dilemmas.

Course Learning Outcomes (CLOs):

Course outcomes: At the end of this course, students will be able to

- CLO1:** Understand objectives of ethics and human values that ought to guide the engineering profession.
- CLO2:** Apply work ethics in the profession and in society and Resolves the moral issues in the profession and moral development.
- CLO3:** Understand the Engineers as responsible experimenters, assessment of safety and risk, employee rights and professional rights.
- CLO4:** Shape themselves into valuable professionals, follow ethics and are able to solve their ethical dilemmas

UNIT – 1

Morals, values and Ethics: Integrity – Work ethic – Service learning – Civic virtue – Respect for others – Living peacefully – Caring – Sharing – Honesty – Courage – Valuing time – Cooperation – Commitment – Empathy – Self-confidence – Character – Spirituality – Introduction to Yoga and meditation for professional excellence and stress management.

UNIT -II

Senses of Engineering Ethics: Variety of moral issues – Types of inquiry – Moral dilemmas – Moral Autonomy – Kohlberg's theory – Gilligan's theory – Consensus and Controversy – Models of professional roles – Theories about right action – Self-interest – Customs and Religion – Uses of Ethical Theories.

UNIT – III

Engineering as Social Experimentation: Engineering as Experimentation, Engineers as Responsible Experimenters, Codes of Ethics, Safety, Responsibility and Rights: Safety and Risk– Assessment of Safety and Risk, Risk Benefit Analysis and Reducing Risk. Collegiality and Loyalty, Respect For Authority, Collective Bargaining Confidentiality, Conflicts Of Interest, Occupational Crime, Professional Rights Employee Rights,

UNIT – IV

Global Issues: Multinational Corporations, Environmental Ethics, Computer Ethics, Engineers as Managers, Consulting Engineering, Engineering as Expert Witnesses and Advisors. Intellectual Property Rights (IPR) – Discrimination.

TEXT BOOKS:

1. Mike Martin and Roland Schinzinger, Introduction to Engineering Ethics, Mc Graw Hill, 2nd Edition, 2010.

ELECTRICAL MACHINES LAB – II

III B.Tech – V Semester (Code: 18EEL51)

Lectures	0	Tutorial	0	Practical	3	Credits	1
Continuous Internal Assessment			50	Semester End Examination (3 Hours)			50

Course Objective: To make the students

CO1: To develop experimental setups for studying the performance and operation of squirrel cage and slip ring induction motors.

CO2: To perform Direct and Indirect tests of various induction motors.

CO3: Acquire hands on experience of conducting various tests on alternators and obtaining their performance indices using standard analytical as well as graphical methods.

CO4: To develop experimental setups for studying the performance and operation of synchronous Motors.

Course Outcomes: After completion of this lab course, the student is able to

CLO1. Analyze the performance characteristics of Induction motors.

CLO2. Assess the performance of the given Induction motors.

CLO3. Know the performance of synchronous generators.

CLO4. Know the performance of synchronous motors.

List of Experiments:

1. Load test on Squirrel-Cage Induction motor.
2. Load test on Slip-Ring Induction motor.
3. No-load and Blocked rotor test on 3-phase induction motor.
4. Separation of losses of 3-phase Induction motor.
5. Brake test on single - phase induction motor.
6. Determination of Equivalent circuit of single - phase induction motor.
7. Real Power flow Control of 3-Phase Induction Generator.
8. Regulation of alternator by EMF &MMF method.
9. Regulation of alternator by ZPF method.
10. Synchronization of alternator with infinite bus with P & Q control.
11. Load test on Alternator.
12. Measurement of X_d and X_q of a three phase alternator.
13. V and inverted V curves of synchronous motor.
14. Synchronous Motor performance with constant excitation.
15. Load test on Universal Motor.

Note: Minimum 10 experiments should be conducted.

**MICROPROCESSORS & MICROCONTROLLERS LABORATORY**

III B.Tech-V Semester (Code: 18EEL52)

Lectures	0	Tutorial	0	Practical	3	Credits	1
Continuous Internal Assessment			50	Semester End Examination (3 Hours)			50

Course Objectives: To make the students

CO1: Understand the working of TASM to write assembly language programs for 8086 microprocessors.

CO2: Understand the operation of 8086 development board.

CO3: Understand the operation of 8051 development board.

CO4: Understand the working of different programmable i/o devices

Course Outcomes: At the end of this course, students will showcase the ability to

CLO1: Write basic programs in assembly language for 8086 microprocessors using TASM

CLO2: Write complex programs in assembly language for 8086 microprocessors using TASM.

CLO3: Interface programmable i/o devices using 8086 development board to develop various applications.

CLO4: Interface programmable i/o devices using 8051 development board to develop various applications.

Program execution with Assembler

1. Programs on 16-bit arithmetic and logical operations for 8086 microprocessors. (using various addressing modes)
2. Programs on conditional and unconditional branching instructions for 8086 microprocessors
3. Programs to implement procedures for 8086 microprocessors.
4. Programs to sort given data using 8086 microprocessors.
5. Programs to implement string manipulations using 8086 microprocessors.
6. Programs to implement interrupt handling using 8086 microprocessors.

Program execution with 8086 Development boards

7. Study of Programmable peripheral interface 8255.
8. Study of Programmable interval timer 8254.
9. Study of Programmable Keyboard Display Interface 8279
10. Elevator Simulator interfacing with 8086 microprocessors.
11. Traffic light controller interfacing with 8086 microprocessors.
12. Stepper motor control using 8086 microprocessors.

Program execution with 8051 Development boards

13. Programming arithmetic, logical and bit manipulation instructions using 8051 microcontrollers.
14. Program and verify timer/counter in 8051 microcontrollers.
15. Program and verify interrupt handling in 8051 microcontrollers.
16. UART operation in 8051 microcontrollers.
17. Interfacing DAC and ADC to 8051 microcontroller.
18. Interfacing stepper motor using 8051 microcontrollers.

Note: Minimum 10 experiments should be conducted

AI TECHNIQUES IN ELECTRICAL ENGINEERING

III B.Tech-VI Semester
(18EE604)

Lectures	4	Tutorial	0	Practical	0	Credits	3
Continuous Internal Assessment			50	Semester End Examination (3 Hours)			50

Course Objectives (COs): To make the students

- CO1 Understand the concepts of artificial neural networks
- CO2 Understand the concepts of Fuzzy Logic.
- CO3 Understand the concepts of genetic algorithms
- CO4 Analyze the applications of AI techniques to Electrical Engineering

Course Outcomes (CLOs): After completion of this course, students will be able to

- CLO1 Realize the concepts of ANN Algorithms.
- CLO2 Realize the concepts of Fuzzy Logic.
- CLO3 Realize the concepts of Genetic Algorithm.
- CLO4 Apply soft computing (AI) techniques to real-world problems.

UNIT – I

Artificial Neural Networks: Introduction, Models of Neuron Network-Architectures – Knowledge representation, Artificial Intelligence and Neural networks–Learning process–Error correction learning, Hebbian learning–Competitive learning–Boltzman learning, supervised learning–Unsupervised learning–Reinforcement learning–Learning tasks.

ANN Paradigms: Multi-layer perceptron using Back propagation Algorithm (BPA), Self – Organizing Map (SOM), Radial Basis Function Network-Functional Link Network (FLN), Hopfield Network

UNIT – II

Fuzzy Logic: Introduction –Fuzzy versus crisp, Fuzzy sets-Membership function –Basic Fuzzy set operations, Properties of Fuzzy sets –Fuzzy cartesian Product, Operations on Fuzzy relations –Fuzzy logic –Fuzzy Quantifiers, Fuzzy Inference-Fuzzy Rule based system, Defuzzification methods.

BAPATLA ENGINEERING COLLEGE:: BAPATLA
BAPATLA ENGINEERING COLLEGE :: BAPATLA

UNIT – III

Meta Heuristic techniques: Introduction Description of meta heuristics, Principle of population-based meta heuristics Principle of population-based meta heuristics, Genetic algorithm, Differential evolution, Evolutionary programming, Backtracking search optimization algorithm, Particle swarm optimization, Ant colony optimization, Artificial bee colony, Firefly algorithm, Teaching–learning-based optimization

– UNIT – IV

Applications of AI Techniques: ANN applications to Load forecasting and frequency control in Single area system, Fuzzy logic application to PSS and Speed control of DC and AC Motors, Meta Heuristic applications to Economic load dispatch.

POWER SYSTEM PROTECTION

III B.Tech-VI Semester (Code: 18EE602)

Lectures	4	Tutorial	– 1	Practical	0	Credits	4
Continuous Internal Assessment		50	Semester End Examination (3 Hours)				50

Prerequisites: Power systems, Basics of circuit theory.

Course Objectives: To make the students

CO1: Develop adequate knowledge of requirement of protective relaying and about all types of protective relays.

CO2: Provide the knowledge of static relays and numerical relays.

CO3: Understand Protection of alternators, transformers and transmission lines.

CO4: Capable of understanding about microprocessor relays and computer based relays. CO5: Develop basic knowledge of switch gear and principles of operations of various types of circuit breakers.

CO6: Analyze ratings and specifications of circuit breakers.

Course Outcomes: After completion of this course, students will be able to

CLO1: Explain requirement of protective relaying and classification of relays.

CLO2: Understand basic components of static relays, types of comparators, types of over current relays and types of numerical relays.

CLO3: Describe differential protection for generators, transformers and transmission lines and feeders.

CLO4: Explain microprocessor and computer-based relays.

CLO5: Identify and differentiate various types of circuit breakers. CLO6: Analyze ratings and specifications of circuit breakers.

UNIT – I

Protective Relays: Introduction, basic requirement of protective relaying, zones of protection, primary and backup protection, classification of relays, attracted armature, balanced beam, induction disc, thermal relays, Buchholz's relay, Over current, under voltage, directional and non-directional relays. Distance relays, impedance, reactance, mho and off set mho relays. Differential relays, circulating current and opposite voltage differential scheme. Negative sequence relays.

UNIT – II

Static Relays: Introduction, basic component of static relays. Comparators, amplitude and

BAPATLA ENGINEERING COLLEGE :: BAPATLA

(Autonomous)

phase comparators. Over current relays, instantaneous over current relay, inverse time over current relays, differential relays. Introduction to numerical relays, Introduction to Microprocessor and PC based Relaying.

UNIT – III

Protection of alternators, transformers and transmission lines: Differential protection for generators, transformers and transmission lines, field suppression of alternator, over current and distance protection for feeders, carrier protection.

UNIT – IV

Switchgear: Elementary principles of arc phenomenon, arc quenching, interruption of capacitive currents and low current chopping, resistance switching, recovery and restriking voltages. Principles of operations of various types of circuit breakers, air break, oil filled, air blast, vacuum and SF6 circuit breakers. Rating and specifications of circuit breaker.

**ELECTRICAL DRIVES**

III B.Tech-VI Semester (Code: 18EE603)

Lectures	4	Tutorial	0	Practical	0	Credits	3
Continuous Internal Assessment			50	Semester End Examination (3 Hours)			50

Prerequisites: Electrical machines –I(18EE304), Electrical machines-II(18EE403) & Power Electronics (18EE503).

Course Objectives: To make the students

- CO1: Describe the structure of Electric Drive systems and their role in various applications such as flexible production systems, energy conservation, renewable energy, transportation etc., making Electric drives an enabling technology
- CO2: Describe the operation of dc motor drives to satisfy four-quadrant operation to meet Mechanical load requirements.
- CO3: Describe the operation of induction machines in an energy efficient manner using Power electronics.
- CO4: Learn the basic operation of stepper motors and switched-reluctance motor drives.

Course**Outcomes:**

After completion of this course, the student will be able to

- CLO1: Understand different types of drives and applications in various industries & To know the characteristics of various motors and loads.
- CLO2: Gain the knowledge about operation of d.c motor speed control using converters and choppers
- CLO3: Acquire the knowledge of different speed control methods in induction motors using thyristors based control schemes.
- CLO4: Learn the basic operation of stepper motors and switched-reluctance motor drives.

UNIT – I

Introduction: Electric drives - advantages of electric drive - Type of electric drives - components of electric drives - Status of dc and ac drives. **Dynamics of Electric Drives:** Speed torque conventions and multi quadrant operation - Equivalent values of drive parameters. **Control of Electric Drives:** Modes of operation - Speed control and drive classification - closed-loop control of drives.

UNIT – II

DC motor Drives: DC motors and their performance – Starting - methods of braking - speed control - Methods of armature voltage control - Transformer and uncontrolled rectifier control.

Controlled Rectifier fed DC Drives: Single phase fully and half controlled rectifier control of separately excited dc motor - Three phase fully and half controlled rectifier control of separately excited dc motor - Dual converter control of separately excited dc motor - comparison of conventional.

Chopper fed DC Drives: Control of separately excited dc motors - Chopper control of series motor.

UNIT – III

Induction motor drives: Three phase induction motors - Operation with unbalanced source voltages and single phasing - Operation with unbalanced rotor impedances – Starting – braking - transient analysis - Speed control - pole amplitude modulation - stator voltage control - Variable frequency control from voltage and current sources - Eddy current drives - rotor resistance control - slip power recovery - Variable speed constant frequency generation.

UNIT – IV

Synchronous motor drives: Synchronous motors - Operation and fixed frequency supply - Synchronous variable speed drives - braking of synchronous motor. Switched reluctance motor drives - brush less dc motors - stepper motors – variable reluctance motor. Vector controls- Space vector modulation.

APPLICATION OF IOT IN ELECTRICAL ENGINEERING

III B.Tech-VI Semester (Code: 18EE604)

Lectures	3	Tutorial	0	Practical	3	Credits	3
Continuous Internal Assessment			50	Semester End Examination (3 Hours)			50

Course Objective: The objective of this course is to impart necessary and practical knowledge of components of Internet of Things and develop skills required to build real-life IOT based projects.

CO1. Understand the concepts of Internet of Things

CO2. Analyze basic protocols in wireless sensor network

CO3. Design IOT applications in different domain and be able to analyze their performance

CO4. Implement basic IOT applications.

Learning Outcomes

After the completion of this course, the students will be able to:

CLO1. Understand internet of Things and its hardware and software components

CLO2. Acquire Knowledge on Interface I/O devices, sensors & communication modules

CLO3. Able to design remotely monitor data and control devices

CLO4. Able to develop real life IOT based projects.

UNIT – I

Introduction to IOT: Architectural Overview, Design principles and needed capabilities, IOT Applications, Sensing, Actuation, Basics of Networking, M2M and IOT Technology Fundamentals- Devices and gateways, Data management, Business processes in IOT, Everything as a Service(XaaS), Role of Cloud in IOT, Security aspects in IOT.

UNIT – II

Elements of IoT: Hardware Components- Computing (Arduino, Raspberry Pi), Communication, Sensing, Actuation, I/O interfaces. Software Components- Programming API's (using Python/Node.js/Arduino) for Communication Protocols-MQTT, ZigBee, Bluetooth, CoAP, UDP, TCP.

BAPATLA ENGINEERING COLLEGE :: BAPATLA

(Autonomous)

UNIT–III

IoT Application Development: Solution framework for IoT applications- Implementation of Device integration, Data acquisition and integration, Device data storage- Unstructured data storage on cloud/local server, Authentication, authorization of devices.

UNIT – IV

IoT Case Studies: IOT case studies and mini projects based on Industrial automation, Transportation, Agriculture, Healthcare, Home Automation

TEXT BOOK:

4. Michael Miller , “ The Internet of Things: How Smart TVs, Smart Cars, Smart Homes, and Smart Cities are Changing the World ” , Que Publishing, 1st edition , 2015.

List of Experiments

Basic Level (any 7)

1. Familiarization with Arduino/Raspberry Pi and perform necessary software installation.
2. To interface LED/Buzzer with Arduino/Raspberry Pi and write a program to turn ON LED for 1 sec after every 2 seconds.
3. To interface Push button/Digital sensor (IR/LDR) with Arduino/Raspberry Pi and write a program to turn ON LED when push button is pressed or at sensor detection.
4. To interface DHT11 sensor with Arduino/Raspberry Pi and write a program to print temperature and humidity readings.
5. To interface motor using relay with Arduino/Raspberry Pi and write a program to turn ON motor when push button is pressed.
6. To interface OLED with Arduino/Raspberry Pi and write a program to print temperature and humidity readings on it.
7. To interface Bluetooth with Arduino/Raspberry Pi and write a program to send sensor data to smartphone using Bluetooth.

BAPATLA ENGINEERING COLLEGE :: BAPATLA

(Autonomous)

8. To interface Bluetooth with Arduino/Raspberry Pi and write a program to turn LED ON/OFF when '1'/'0' is received from smartphone using Bluetooth.
9. Write a program on Arduino/Raspberry Pi to upload/retrieve temperature and humidity data to thingspeak cloud.
10. To install MySQL database on Raspberry Pi and perform basic SQL queries.
11. Write a program on Arduino/Raspberry Pi to publish temperature data to MQTT broker.
12. Write a program on Arduino/Raspberry Pi to subscribe to MQTT broker for temperature data and print it.
13. Write a program to create TCP server on Arduino/Raspberry Pi and respond with humidity data to TCP client when requested.
14. Write a program to create UDP server on Arduino/Raspberry Pi and respond with humidity data to UDP client when requested.

Advanced Level (any 3)

1. Design of smart socket and operating through phone application using Arduino
2. Design of smart water tank and reading continuous water level using Arduino
3. Making of DIY weather station and handling temperature and humidity values on cloud platform
4. Building of smart parking meter and design of its mobile application
5. DIY heart beat monitoring system by interfacing pulse sensor to Arduino
6. Design of soil moisture monitoring system using Arduino

Note: Minimum 10 experiments should be conducted

POWER SYSTEM OPERATION CONTROL AND STABILITY

III B.Tech-VI Semester (Code: 18EE605)

Lectures	4	Tutorial	1	Practical	0	Credits	4
Continuous Internal Assessment			50	Semester End Examination (3 Hours)			50

Prerequisites: Mathematics, Power system-I, Power System-II

Course Objectives: To make the students

CO1: Understand economic load dispatch under various operational constraints and techniques to solve the problem.

CO2: Modeling of turbines and generators and know the importance of quality of power, P-f, Q-V control loops, AGC

CO3: To deal with the numerical methods studied in applied mathematics courses to get the Solutions of load flow problem and comparison of different methods.

CO4: Discuss the concept of reactive power and voltage control in detail.

CO5: Understand Power system stability and voltage stability in operation of power system.

Course Outcomes: Students will be able

CLO1: Explain the importance of economic operation of power systems

CLO2: Develop the mathematical models of turbines and governors and know the importance of single area and AGC

CLO3: Develop proper mathematical models for analysis of load flow study

CLO4: Explain the importance and control of reactive power and voltage

CLO5: Explain the stability issues concerned with power system operation

UNIT – I

Economic operation of power systems: Economic dispatch in thermal power station: Heat rate curves, cost curves, incremental fuel and Production costs, economic distribution of load between units without consideration to line losses; Transmission line losses as a function of plant generation, calculation of loss coefficients, Optimum generation allocation between thermal plants; Capability diagram of a synchronous generator.

UNIT – II

Quality of power: Importance of keeping voltage and frequency constant in a power system
The two main control loops- (P- δ) and (Q – V) loops: Load frequency control (LFC) single area case, the P- δ loop: Schematic of load frequency and AVR of a synchronous generator, mathematical modelling of generator, loads, prime mover and speed governor for LFC & corresponding block diagram representation, LFC block diagram of an isolated power system, steady state analysis, dynamic response. The automatic generation control (AGC) scheme – AGC in a single area system, block diagram representation of AGC for an isolated power system

(Autonomous)

UNIT – III

Formulation of Load Flow Problem: Introduction – nonlinear equations - Power Flow Solution Algorithms, solution techniques using Gauss Seidal, Newton Raphson Load Flow Methods.

Reactive power control: The role of excitation system- exciter, generator and sensor models, simplified AVR block diagram,

Voltage control of distribution systems: Tap changing, booster transformers, synchronous phase modifiers, induction regulators and static capacitors.

Transmission line compensation: Series compensation, shunt compensation, static VAR Compensators – thyristor controlled reactors (TCR), thyristor switched capacitors (TSC), and STATCOM,.

UNIT – IV

Power system stability: Introduction – steady state stability, Transient stability, Review of machine swing equation - Equal area criterion of stability – applications. Step by step solution of the swing curve – factors affecting steady state and transient stabilities.

Voltage stability: Introduction, comparison of angle & voltage stability, reactive power flow and voltage collapse, Mathematical formulation of voltage stability problem.

TEXT BOOKS:

1. Power system analysis by H.Saadat , McGraw Hill -2nd Edition 2004
2. Modern power system analysis by D.P.Kothari & I.J.Nagrath McGraw Hill-4th Edition, 2011.

OPTIMIZATION TECHNIQUES

III B.Tech-VI Semester (18EED11)

Lectures	4	Tutorial	0	Practical	0	Credits	3
Continuous Internal Assessment			50	Semester End Examination (3 Hours)			50

Course Objectives (COs): To make the students

- CO1 Understand the Concepts to solve linear programming problems arise in real life situations involving several parameters using various methods and their advantages
- CO2 Discuss the applications of linear programming namely transportation, assignment and travelling salesman problem which arise in different situations in all engineering branches
- CO3 Explain the non-linearity in optimization problems, direct search techniques and iterative methods
- CO4 Discuss the applications of optimization techniques in the problem Dynamic programming in optimization and solve certain integer linear programming problems

Course Learning Outcomes (CLOs): After completion of this course, students will be able to

- CLO1 Develop the mathematical model of an optimization problem and identify particular case of activities among the several alternatives and solve a given linear programming problem using suitable method
- CLO2 Obtain solution for a special type linear programming problem namely transportation, assignment & travelling salesman problem and infer their practical relevance
- CLO3 Analyze the characteristics of non-linearity in optimization and solve certain NLPP using searching and iterative techniques
- CLO4 Describe the characteristics of Dynamic programming in optimization and solve certain integer linear programming problems

UNIT-I

Linear Programming Problems (LPP): Mathematical models and basic concepts of linear programming problem; Solution of linear programming problems - Graphical method, Analytical method, Simplex method, Artificial variable technique (Big-M and Two-phase methods), Duality principle and dual simplex method.

BAPATLA ENGINEERING COLLEGE :: BAPATLA

(Autonomous)

UNIT-II

Special type of LPPs: Mathematical model of transportation problem, Methods of finding initial basic feasible solution to find the optimal solution of transportation problem, Exceptional cases in transportation problem, Degenerate solution of transportation problem, Assignment problem as a special case of transportation problem, Hungarian algorithm to solve an assignment problem, Special cases in assignment problem. The travelling salesman problem, Formulation of travelling salesman problem as an assignment problem.

UNIT-III

Non-linear Programming Problems (NLPP): Classical method of optimization using Hessian matrix, Iterative methods - Random search methods, Steepest decent method and Conjugate gradient method; Direct methods - Lagrange's method, Kuhn-Tucker conditions, Penalty function approach.

UNIT – IV

Dynamic Programming:

Principle of optimality – recursive relations – solution of LPP – simple examples.

Integer Linear Programming: Gomory's cutting plane method – Branch and bound algorithm – Knapsack problem – linear 0–1 problem.

ELECTRICAL ENERGY CONSERVATION & AUDITING

III-B.Tech VI-Semester (Code: 18EED12)

Lectures	4	Tutorial	0	Practical	0	Credits	3
Continuous Internal Assessment		50	Semester End Examination (3 Hours)			50	

Course objectives: To make the students

CO1: Understand the concept of energy conservation, energy management.

CO2: Know the energy efficient motors and its characteristics.

CO3: Understand the power factor improvement, lighting and different measuring instruments.

CO4: Know the economic aspects of energy management.

Course outcomes: At the end of this course, students will be able to

CLO1: Examine the principles of Energy audit and its process in thermal power station & analyze the different aspects of energy management.

CLO2: Describe the characteristics of energy efficient motors.

CLO3: Illustrate the power factor improvement, good lighting system practice and the types of energy instruments

CLO4: Analyze the economic aspects of Energy Management.

UNIT-I

Basic Principles of Energy Audit: Energy audit - definitions, concept, types of audit, energy index, cost index, pie charts, Sankey diagrams, load profiles, Energy conservation schemes - Energy saving potential, energy audit of thermal power station, building energy audit.

Energy Management: Principles of energy management, organizing energy management program, initiating, planning, controlling, promoting, monitoring, reporting, Energy manager, Qualities and functions, language, Questionnaire - check list for top management.

UNIT-II

Energy Efficient Motors: Energy efficient motors, factors affecting efficiency, loss distribution, constructional details. Characteristics - Variable speed, variable duty cycle systems, Voltage variation - Voltage unbalance - Over motoring - Motor energy audit.

BAPATLA ENGINEERING COLLEGE :: BAPATLA

(Autonomous)

UNIT-III

Power Factor Improvement, Lighting & Energy Instruments: Power Factor Improvement, Lighting: Power factor – Methods of improvement, location of capacitors, Pf with nonlinear loads, effect of harmonics on power factor. Power factor motor controllers - Good lighting system design and practice, lighting control, lighting energy audit. Energy Instruments: Watt meter, data loggers, thermocouples, pyrometers, lux meters, tong testers, application of PLC's.

UNIT-IV

Economic Aspects and Analysis: Economics Analysis - Depreciation Methods, time value of money, rate of return, present worth method, replacement analysis, life cycle costing analysis - Energy efficient motors, Calculation of simple payback method, net present worth method - Power factor correction, lighting - Applications of life cycle costing analysis, return on investment.

POWER DISTRIBUTION SYSTEMS

III B.Tech-V1 Semester (Code: 18EED13)

Lectures	4	Tutorial	0	Practical	0	Credits	3
Continuous Internal Assessment			50	Semester End Examination (3 Hours)			50

Course Objectives: To make the students

CO1: Analyze distribution system planning models and study different load characteristics

CO2: Classify different types of distribution transformers and sub-transmission systems

CO3: Analyze primary and secondary distribution systems

CO4: Calculate voltage drop and power loss for non three phase primary lines

Course outcomes: At the end of this course, students will be able to

CLO1: Able to understand various factors affecting distribution system and also about distribution system planning.

CLO2: To make clear about the Distribution Transformers, voltage regulation and Efficiency calculations. To make clear about the design considerations of sub-transmission lines.

CLO3: Able to design the substation and feeders. Able to understand the design considerations of primary and secondary distribution systems. Apply various protective devices and its coordination techniques to distribution system.

CLO4: Evaluate voltage drop & line loss calculations and design of capacitors & voltage regulating equipment and to understand the effect of compensation on power factor improvement.

UNIT – I

Distribution systems planning and automation: Planning and forecast techniques - Present and future role of computers in distribution system planning –automation - Methods of improvement - Load characteristics – Definitions load growth – tariffs - Diversified demand method.

UNIT – II

Distribution transformers: Types - Regulation and Efficiency- distribution factors – KW KVA Method of determining regulation. Design of sub transmission lines and distribution substations: Introduction – sub transmission systems - distribution substation – Substation bus schemes - description and comparison of switching schemes – substation location and rating - Application of network flow techniques in rural distribution networks to determine optimum location of sub-station.

BAPATLA ENGINEERING COLLEGE :: BAPATLA

(Autonomous)

UNIT – III

Design considerations on primary systems: Introduction , types of feeders,- voltage levels Radial type feeders , feeders with uniformly distributed load and non-uniformly distributed loads. Design considerations of secondary systems: Introduction , secondary voltage levels,- Secondary banking , existing systems improvement. Distribution system Protection: Basic definitions, over current protection devices, fuses, automatic circuit reclosures, automatic line sectionalizers, objectives of distribution system protection ,coordination of protective devices, Fuse to Fuse co-ordination, Fuse to circuit breaker coordination, Reclosure to circuit breaker co-ordination.

UNIT-IV

Voltage drop and power loss calculations: Three phase primary lines, non 3 phase primary lines, 4 wire multi grounded primary lines , copper loss , Distribution feeder costs , loss reduction and voltage improvement in rural distribution networks. Applications of Capacitors to distribution systems: Effect of series and shunt capacitors, Power factor correction , economic justification for capacitors , a computerized method to determine the economic power factor , Procedure to determine the best and optimum capacitor location Distribution System Voltage Regulation: Basic definitions , Quality of service , voltage control , line drop compensation.

DIGITAL SIGNAL PROCESSING

III B.Tech-V1 Semester (Code: 18EED14)

Lectures	4	Tutorial	0	Practical	0	Credits	3
Continuous Internal Assessment		50	Semester End Examination (3 Hours)				50

Course Objective:

The primary objective of this course is to provide a thorough understanding and working knowledge of design, implementation and analysis DSP systems.

Course Outcomes

On successful completion of the course, the student will:

CO1.To acquire knowledge in LTI signals and systems and the concept of Z-transform.

CO2.To implement DFT and IDFT using different algorithms.

CO3.Able to design Digital IIR filters from Analog filters using various techniques.

CO4.Able to design Digital FIR filters using window techniques

Learning Outcomes

After the completion of this course, the students will be able to:

CLO1. Explain the LTI signals and systems and concept of Z-transform.

CLO2. Implement DFT and IDFT using DIT-FFT and DIF-FFT algorithms.

CLO3. Design the Butter worth and Chebyshev digital IIR filters and their realization.

CLO4. Implement the appropriate type of design method for FIR filters and their realization.

UNIT – I

Discrete Signals and Systems: Introduction to digital signal processing, advantages and applications, discrete time signals, LTI system, stability and causality. Frequency domain representation of discrete time signals and systems.

Z-Transforms: Introduction to Z-transform, Z-transform theorems and properties, Inverse Z transform, causality and stability, solution of difference equations.

MATLAB programming to generate discrete time sequence , plot the frequency response of system and to find partial fraction of $H(Z)$.

UNIT – II

Discrete Fourier Transform (DFT): Introduction, Properties of DFT, Linear convolution using DFT, computations for evaluating DFT and IDFT.

Fast Fourier Transform (FFT): Introduction, advantages of FFT, Decimation in time FFT algorithms - Decimation in frequency FFT algorithm, IDFT using FFT algorithm.

MATLAB programming to compute the DFT of sequence $x(n)$ and comparison of circular and linear convolution of two sequences.

UNIT – III

BAPATLA ENGINEERING COLLEGE :: BAPATLA

(Autonomous)

IIR Filter Design Techniques: Introduction, Properties of IIR filters, Design of analog prototype of digital filters, Digital Butterworth and Chebyshev filters using bilinear transformation, Impulse invariance transformation methods.

Realization of IIR Filters: Direct form, Canonic form, Cascade form, Parallel form and Lattice- Ladder form of realizations
MATLAB programming on design of Butterworth and Chebyshev filters

UNIT – IV

FIR Filter Design Techniques: Introduction to characteristics of linear phase FIR filters, Frequency response. Comparison of IIR and FIR filters. Designing of FIR filters using windowing techniques.

Realization of FIR Filters: Transversal structure, cascade realization, Linear phase realization, Lattice structure.
MATLAB programming to design digital FIR filters using windowing method

CONTROL SYSTEM LAB

B.Tech – VI Semester (Code: 18EEL601)

Lectures	0	Tutorial	0	Practical	3	Credits	1
Continuous Internal Assessment		50	Semester End Examination (3 Hours)			50	

Prerequisites: Mathematics, Network Theory

Course Objectives: To make the students

CO1: Able to analyze characteristics of various types of systems.

CO2: To familiarize with the modelling of dynamical systems.

CO3: Able to design Lag, Lead, Lead-Lag compensators theoretically & experimentally.

CO4: To familiarize to observe the effect of P, PI, PD and PID controllers on system.

CO5: Able to find the closed loop stability of the system with different approaches.

Course Outcomes: Students will be able

CLO1: Analyze characteristics of various types of systems.

CLO2: Derive a Mathematical model for Various Systems with various methods.

CLO3: Design and verify Lag, Lead, Lead-Lag compensators experimentally.

CLO4: Analyze the effect of P, PI, PD and PID controllers on a control system.

CLO5: Analyze and interpret stability of the system through Frequency Response Method.

LIST OF EXPERIMENTS:

1. Characteristics of magnetic amplifier.
2. Characteristics of A.C servo motor
3. Characteristics of synchros.
4. Effect of feedback on D.C servomotor.
5. Transfer function of D.C motor
6. Transfer function of D.C generator.
7. Time response of second order systems
8. Simulation of transfer functions using operational amplifier
9. Stepper motor control.
10. D.C. position control System.
11. Lag and lead compensation – Magnitude and phase plot
12. Temperature controller using PID
13. Effect of P, PD, PID controller on a second order system
14. P, PI, PD, PID control using Op-Amps.
15. Frequency response of first and second order systems.

Note: Minimum 10 experiments should be conducted.

POWER ELECTRONICS LAB

III B.Tech-VI Semester(18EEL62)

Lectures	0	Tutorial	0	Practical	3	Credits	1
Continuous Internal Assessment			50	Semester End Examination (3 Hours)			50

Prerequisites: Basic Electric Engineering, Semiconductor Physics and Nano Materials.

Course Objectives: To make the students

CO1: To Understand the Turning ON and OFF of Transistor and Power Electronics Devices.

CO2: To Analyze AC to DC Conversion circuits on R, RL, Back emf Loads.

CO3: To Analyze the operation of inverters PWM techniques on R, Motor Loads.

CO4: To Analyze the operation of DC-DC choppers and AC Voltage controllers on R Load.

Course Outcomes: Students will be able to

CLO1: Understand the ON and OFF of Transistor & Power Electronics Devices and its Protection.

CLO2: Design and analyze AC to DC Conversion circuits on R, RL, Back emf Loads.

CLO3: Design and analyze the operation of inverters PWM techniques on R, Motor Loads.

CLO4: Design and analyze operation of DC-DC choppers and AC Voltage controllers on R Load.

LIST OF EXPERIMENTS:

A- Essential Experiments

1. Static characteristics of SCR, TRIAC.
2. Characteristics of MOSFET & IGBT.
3. Gate triggering methods for SCR (R, RC, UJT).
4. 1- phase Half & Full controlled rectifier with R, RL & RLE load.
5. Voltage commutated DC chopper with R load.
6. 1-phase modified series inverter with R load.
7. 1-phase parallel inverter with R & RL loads.

B- List of Optional Experiments:

(i) Chose one Experiment

8. 1-phase Cyclo-converter (Center tapped or Bridge) with R load.
9. 1- phase IGBT based inverter with R, RL loads.
10. 1-phase Dual converter with R, RL & RLE loads (Circulating and Non-circulating modes).

BAPATLA ENGINEERING COLLEGE :: BAPATLA

Lectures	0	Tutorial	0	Practical	3	Credits	1
Continuous Internal Assessment			50	Semester End Examination (3 Hours)			50

Course Objectives: To make the students

CO1: Analyse various power electronic circuits and AGC using MATLAB/P-SIM

CO2: Determine the bus impedance and admittance matrices using MATLAB.

CO3: Apply numerical methods for solving load flow problems and verify using MATLAB/MI-POWER

CO4: Analyze various faults occurring in power system and simulate the faults using MIPOWER/MATLAB

Outcomes: Students will be able to

CLO1: Analyse various power electronic circuits and AGC using MATLAB/P-SIM

CLO2: Derive a Mathematical model for impedance and admittance matrices..

CLO3: Execute numerical methods for solving load flow problems and verify using MATLAB/PSIM.

CLO4: Design and verify various faults occurring in power system and simulate the faults using MIPOWER

LIST OF EXPERIMENTS:

MATLAB/PSIM:

1. Simulation of Boost and Buck converters.
2. Simulation of Three phase three level PWM converter.
3. Simulation of single area load frequency control with and without PI controller and without PI controller.
4. Study of Economic load dispatch.
5. Formation of YBUS and ZBUS.

LABVIEW:

1. Simple Amplitude Measurement
2. Building Arrays Using For Loop and While Loop
3. Generation of Random Signal
4. Waveform Minimum & Maximum Value Display
5. Matrix Fundamentals

BAPATLA ENGINEERING COLLEGE :: BAPATLA

(Autonomous)

MIPOWER/ETAP.

1. Study of Gauss Seidel load flow analysis.
2. Study of Newton Raphson method of load flow analysis.
3. Study of Fast decoupled
4. Study of symmetrical/ unsymmetrical fault analysis in a power system.
5. Study of Transient stability.

Note: Minimum 10 experiments should be conducted.

HIGH VOLTAGE ENGINEERING

IV B.Tech – VII Semester (Code: 18EE701)

Lectures	4	Tutorial	0	Practical	0	Credits	3
Continuous Internal Assessment			50	Semester End Examination (3 Hours)			50

Pre-requisites: Physics, Circuit theory, Power systems-1

Course objectives: To make the students

CO1: Understand the breakdown phenomenon in solids, liquids and gases.

CO2: Know the concepts of partial discharges.

CO3: To know the generation of high voltages.

CO4: Understand different measuring techniques in high voltages.

CO5: To know the protective techniques against over voltages.

CO6: Understand the testing techniques of different high voltage apparatus.

CO7: Know the layout of high voltage laboratories.

Course outcomes: At the end of the course, the student will demonstrate

CLO1: Understand the basic physics related to various breakdown processes in solid, liquid and gaseous insulating materials.

CLO2: Knowledge of generation and measurement of D. C., A.C., & Impulse voltages.

CLO3: Knowledge of tests on H. V. equipment and on insulating materials, as per the standards.

CLO4: Knowledge of protection against over voltages.

UNIT-I

Breakdown phenomenon of Gases , Liquids and Solids: Ionization processes and de-ionization processes, Types of Discharge, Gases as insulating materials, Breakdown in Uniform gap, non-uniform gaps, Townsend's theory, Streamer mechanism, Corona discharge. Breakdown in pure and commercial liquids, Solid dielectrics and composite dielectrics, intrinsic breakdown, electromechanical breakdown and thermal breakdown, Partial discharge, applications of insulating materials.

UNIT-II

BAPATLA ENGINEERING COLLEGE :: BAPATLA

(Autonomous)

Generation of High voltages: Generation of high D. C. and A.C. voltages, generation of impulse voltages, generation of impulse currents, tripping and control of impulse generators.

UNIT-III

Measurement of high voltages and currents: Measurements of Peak voltage, impulse voltage and high direct current measurement method, cathode ray oscillographs for impulse voltage and current measurement, measurement of dielectric constant and loss factor, partial discharge measurements. Protection against over-voltages, Surge diverters, Surge modifiers.

UNIT-IV

High voltage testing techniques: Various standards for HV Testing of electrical apparatus, IS, IEC standards, Testing of insulators and bushings, testing of isolators and circuit breakers, testing of cables, power transformers and some high voltage equipment, High voltage laboratory layout, indoor and outdoor laboratories, testing facility requirements, safety precautions in H. V. Labs.

TEXTBOOKS:

1. High Voltage Engineering by M.S.Naidu and V.Kamaraju – TMH.
2. High Voltage Engineering fundamentals by Kuffel and Zungel, Elsavier Publications
3. C. L. Wadhwa, “High Voltage Engineering”, New Age International Publishers, 2007.

ELECTRICAL MACHINE DESIGN

IV B.Tech – VII Semester (Code: 18EED21)

Lectures	4	Tutorial	0	Practical	0	Credits	3
Continuous Internal Assessment		50	Semester End Examination (3 Hours)				50

Course Objectives: To make the students

CO1: To develop knowledge on principles of design of rotating machines

CO2: To design main dimensions & cooling systems of transformers

CO3: To develop knowledge on main dimensions of induction motor and its classification

CO4: Illustrate about design of stator and rotor of salient pole and cylindrical rotor alternators

Course Outcomes: Students will be able to

CLO1: Acquire knowledge to carry out a detailed design of a dc machine and provide the information required for the fabrication of the same along with an estimate of various performance indices.

CLO2: Acquire knowledge to carry out a detailed design of a transformer and provide the information required for the fabrication of the same.

CLO3: Construct the design of stator and rotor of induction machines.

CLO4: Design stator and rotor of synchronous machines and study their behaviour.

UNIT-I

D.C.MACHINES: E.M.F generated from full pitch - fractional pitch with and without distributed windings - distribution factor. Design of main dimensions from output equation - Design of Armature windings - Design of field system - Design of inters pole and commentator.

UNIT-II

TRANSFORMERS: Derivation of output equation - volt per turn importance and calculation of main dimensions for three phase and single phase transformers - window dimensions - Yoke design and coil design - Design of tank with tubes. Basic design aspects of dry transformer and high frequency transformers

UNIT-III

INDUCTION MOTOR: Derivation of output equation - calculation of main dimensions - Stator design - number of slots - shape and area of slots - Rotor design for squirrel cage and slip ring types.

UNIT-IV

SYNCHRONOUS MACHINES: Derivation of output equation - Calculations of Main Dimensions for salient pole and cylindrical rotor alternators - Stator design - number of stator slots and slot dimensions - Pole design for salient pole generators - pole winding calculations. Design of rotor for cylindrical rotor alternator - Design of rotor windings.

COMPUTER AIDED DESIGN: Advantage of computer aided design - Flow chart for computer aided design.

CONTROL SYSTEMS DESIGN

IV B.Tech – Semester-VII (Code: 18EED22)

Lectures	4	Tutorial	0	Practical	0	Credits	3
Continuous Internal Assessment		50	Semester End Examination (3 Hours)			50	

Prerequisites: Mathematics, Physics

Course Objectives: To make the students

CO1: To train students to understand the Time and frequency domain responses in terms of specifications.

CO2: To teach students to Design controllers in the time domain.

CO3: To teach students to Design controllers in the frequency domain

CO4: To guide students to assess controllability and observability of control systems

CO5: To teach students to Analysis of Nonlinear Systems.

Course Outcomes: Students will be able

CLO1: Understand various design specifications.

CLO2: To Design controllers to satisfy the desired design specifications using simple controller structures (P, PI, PID, compensators).

CLO3: To Design simple feedback controllers.

CLO4: Design controllers using the state-space approach.

CLO5: To assess effect of various nonlinearities

UNIT – I

Introduction: Introduction to design problem and philosophy. Introduction to time domain and frequency domain design specification and its physical relevance.

Response of System: Effect of gain on transient and steady state response. Effect of addition of pole on system performance. Effect of addition of zero on system response

UNIT – II

Design of Classical Control System in the time domain: Introduction to compensator. Design of Lag, lead lag-lead compensator in time domain. Feedback and Feed forward compensator design. Feedback compensation. Realization of compensators.

UNIT - III

Design of Classical Control System in frequency domain: Compensator design in frequency domain to improve steady state and transient response. Feedback and Feed forward compensator design using bode diagram. Design of P, PI, PD and PID controllers in time domain and frequency domain for first, second and third order systems. Control loop with auxiliary feedback – Feed forward control.

UNIT – IV

Control System Design in state space: Review of state space representation. Concept of controllability & observability, effect of pole zero cancellation on the controllability & observability of the system, pole placement design through state feedback. Ackerman's

BAPATLA ENGINEERING COLLEGE :: BAPATLA

(Autonomous)

Formula for feedback gain design. Design of Observer.Reduced orderobserver.Separation Principle.

Nonlinearities and its effect on system performance : Various types of non-linearity's. Effect of various non-linearity's on system performance. Singular points. Phase plot analysis.

SWITCHED MODE POWER SUPPLY

IV B.Tech – VII Semester (Code: 18EED23)

Lectures	4	Tutorial	0	Practical	0	Credits	3
Continuous Internal Assessment			50	Semester End Examination (3 Hours)			50

Prerequisites: Power Electronics, Electronic Devices and Circuits

Course Objectives: To make the students

CO1: To design various Switched Mode Power Supply components

CO2: To analyze The Modeling and control aspects of converter.

CO3: To understand various Soft-switching DC - DC Converters

CO4: To Get Awareness on Pulse Width Modulated Rectifiers

Course Outcomes: Students will be able to

CLO1: Design various components of dc-dc converter

CLO2: Analyze different controllers for converter

CLO3: Analyze various modes of operation of Dc-Dc converter

CLO4: Analyze the Pulse Width Modulated Rectifiers .

UNIT – I

Design constraints of reactive elements in Power Electronic Systems: Design of inductor, transformer and capacitors for power electronic applications, Input filter design. Basic concepts and steady-state analysis of second and higher order Switched Mode power converters.

UNIT – II

Dynamic Modeling and control of second and higher order switched Mode power converters: Analysis of converter transfer functions, Design of feedback compensators, current programmed, frequency programmed and critical conduction mode control.

UNIT – III

Soft-switching DC - DC Converters: Zero-Voltage-switching converters, Zero-Current-switching converters, Multi resonant converters and Load resonant converters.

UNIT – IV

Pulse Width Modulated Rectifiers: Properties of ideal rectifier, realization of near ideal rectifier, control of the current waveform, single phase and three-phase converter systems incorporating ideal rectifiers and design examples. Nonlinear phenomena in switched mode power converters: Bifurcation and Chaos.

DIGITAL PROTECTION OF POWER SYSTEM

IV B.Tech – VII Semester (Code: 18EED24)

Lectures	4	Tutorial	0	Practical	0	Credits	3
Continuous Internal Assessment			50	Semester End Examination (3 Hours)			50

Course Objectives: To make the students

CO1: Understand the advantages of digital relays over conventional relays.

CO2: Apply the suitable signal processing technique for protection.

CO3: Understand the adaptive criterion for relay decision making.

CO4: Identify the new developments in protective relaying and applications.

Course Outcomes: After completion of this course students will be able to

CLO1: Recognize the advantages of digital relays over conventional relays.

CLO2: Apply the suitable signal processing technique for protection.

CLO3: Understand the adaptive criterion for relay decision making.

CLO4: Identify the new developments in protective relaying and applications.

UNIT - I

Static and Digital Relays: Overview of Static relays, Transmission line protection, Transformer protection, Need for digital protection.

Digital Relays: Basic elements of a digital relay and their functions, signal conditioning subsystem, conversion subsystem, digital relay subsystem

UNIT -II

Signal processing techniques: Sinusoidal based algorithms, Fourier Analysis based algorithms, Least squares-based algorithm, Discrete Fourier Transforms, Wavelet Transforms, Kalman Filtering.

Digital filters: Fundamentals of Infinite Impulse Response Filters, Finite Impulse Response filters, Filters with sine and cosine windows. Travelling Wave Protection scheme, Digital Protection of Transformers.

UNIT-III

Decision making in Protective Relays: Deterministic decision making, Statistical Hypothesis testing, Decision making with multiple criterion, Adaptive decision schemes, Adaptive Differential protective scheme.

UNIT-IV

Applications: Applications of Fuzzy Logic and ANN for power system protection, Fault location algorithm, Wide Area Monitoring and Protection.

HVDC & FACTS

IV B.Tech – VII Semester (Code:
18EED31)

Lectures	4	Tutorial	0	Practical	0	Credits	3
Continuous Internal Assessment			50	Semester End Examination (3 Hours)			50

Prerequisites: Power Electronics, Power Systems.

Course Objectives: To make the students

CO1: Study comparison of AC and DC Transmission systems and components of HVDC.

CO2: Understand the control aspects of HVDC System and harmonics introduction.

CO3: Understand the fundamentals of FACTS Controllers and basic types of facts controllers

CO4: Study objectives of shunt, series and combined compensators and their control structure

Course Outcomes: After completion of the course the student will be able to

CLO1: Compare HVAC and HVDC system and to describe various types of DC links HVDC converter and inverter operation.

CLO2: Describe various methods for the control of HVDC systems and to perform power flow analysis in AC/DC systems.

CLO3: Understand concept of FACTS controller for the specific application based on system requirements and types of FACTS controllers.

CLO4: Analyze the objectives of Shunt Controllers, Series controllers & combined controllers for various functions viz. Transient stability Enhancement, voltage instability prevention and power oscillation damping.

UNIT – I

HVDC transmission: HVDC Transmission system: Introduction, comparison of AC and DC systems, applications of DC transmission, types of DC links, Layout of HVDC Converter station and components of HVDC system. Line commutated converter and voltage source converter based systems.

UNIT – II

Control of HVDC system: Principles of control, desired features of control, converter control characteristics, power reversal, Ignition angle control, current and extinction angle control. Harmonics introduction, generation, ac filters and dc filters. Introduction to multi terminal DC systems and applications, comparison of series and parallel MTDC systems.

UNIT – III

FACTS concepts: Reactive power control in electrical power transmission, principles of conventional reactive power compensators. Introduction to FACTS, flow of power in AC parallel paths and meshed systems, basic types of FACTS controllers, definitions of FACTS controllers, brief description of FACTS controllers.

BAPATLA ENGINEERING COLLEGE :: BAPATLA

(Autonomous)

UNIT – IV

Static Shunt, Series and Combined Compensators: Shunt compensation – objectives of shunt compensation, static VAR compensators – SVC, STATCOM, SVC and STATCOM comparison. Series compensation – objectives of series compensation, thyristor switched series capacitors (TCSC), static series synchronous compensator (SSSC), power angle characteristics. Unified power flow controller (UPFC) – Introduction, operating principle, independent real and reactive power flow controller and control structure. Interline power flow controller (IPFC) – Introduction, operating principle.

ELECTRICAL AND HYBRID VEHICLES

IV B.Tech – VII Semester (Code: 18EED32)

Lectures	4	Tutorial	0	Practical	0	Credits	3
Continuous Internal Assessment			50	Semester End Examination (3 Hours)			50

Prerequisites: Power Conversion Techniques, Electrical Machines

Course objectives: To make the students

CO1: Understand the concept of Vehicle Fundamentals.

CO2: Know the Operation of Electric and Hybrid drive-train topologies.

CO3: Understand the configuration and control of different motor drives.

CO4: Know the Operation of different types of energy storage systems.

Course outcomes: At the end of this course, students will be able to

CLO1: Explain the concepts of Vehicle Fundamentals

CLO2: Describe the operation of Electric and Hybrid drive-train topologies.

CLO3: Analyze configuration and control of different motor drives.

CLO4: Analyze operation of different types of energy storage and management systems.

UNIT-I

Introduction and Vehicle Fundamentals: History of hybrid and electric vehicles, social and environmental importance of hybrid and electric vehicles, impact of modern drive-trains on energy supplies. Basics of vehicle performance, vehicle power source characterization, transmission characteristics, and mathematical models to describe vehicle performance.

UNIT-II

Electric and Hybrid drive-trains: Basic concept of electric traction - introduction to various electric drive-train topologies - power flow control in electric drive-train topologies - fuel efficiency analysis. Basic concept of hybrid traction, introduction to various hybrid drive-train topologies, power flow control in hybrid drive-train topologies, fuel efficiency analysis.

UNIT-III

Electric propulsion unit: Introduction to electric components used in electric vehicles - configuration and control of DC Motor drives - Configuration and control of Induction Motor drives - Configuration and control of Permanent Magnet Motor drives - Configuration and control of Switch Reluctance Motor drives - Drive system efficiency.

UNIT-IV

Energy storage and Management: Introduction to Energy Storage Requirements in Electric Vehicles - Battery based energy storage and its analysis - Fuel Cell based energy storage and its analysis - Super Capacitor based energy storage and its analysis - Hybridization of different energy storage devices. Introduction to energy management strategies used in hybrid and electric vehicle, classification of different energy management strategies, comparison of different energy management strategies

LINE COMMUTATED AND ACTIVE RECTIFIERS

IV B.Tech – VII Semester (Code: 18EED33)

Lectures	4	Tutorial	0	Practical	0	Credits	3
Continuous Internal Assessment			50	Semester End Examination (3 Hours)			50

Prerequisites: Analog Electronics, Power Electronics.

Course Objectives: To make the students

CO1: To analyze controlled rectifier with passive filters.

CO2: To understand the operation of PWM approach and harmonic elimination.

CO3: To analyze operation of Single-phase ac-dc single-switch and bidirectional boost converter.

CO4: To study about Isolated single-phase ac-dc flyback converter.

Course Outcomes: Students will be able to

CLO1: Understand controlled rectifier with passive filters.

CLO2: Designing of PWM based inverters with harmonic elimination.

CLO3: Design Single-phase ac-dc single-switch and bidirectional boost converter.

CLO4: Design Isolated single-phase ac-dc flyback converter.

UNIT-I

Thyristor rectifiers with passive filtering: Half wave, Full wave Rectifiers with RL and RLE loads; 1-phase full-wave rectifiers with L, C and LC filter; 3-phase rectifiers with L, C and LC filter; Relationship between I/P and O/P voltages- expression for filter inductor and capacitors; input current waveshape, commutation overlap.

UNIT-II

Multi-Pulse converter: PWM techniques: single- multiple- and sinusoidal PWM techniques- selective harmonic elimination- space vector modulation; Review of transformer phase shifting, generation of 6-phase ac voltage from 3-phase ac, 6-pulse converter and 12-pulse converters with inductive loads, steady state analysis, commutation overlap, notches during commutation.

UNIT-III

Single-phase ac-dc single-switch and bidirectional boost converter: Review of dc-dc boost converter, power circuit of single-switch ac-dc converter, steady state analysis, unity power factor operation, closed-loop control structure. Review of 1-phase inverter and 3-phase inverter, power circuits of 1-phase and 3-phase ac-dc boost converter, steady state analysis, operation at leading, lagging and unity power factors. Rectification and regenerating modes. Phasor diagrams, closed-loop control structure.

UNIT-IV

Isolated single-phase ac-dc flyback converter: DC-DC flyback converter, output voltage as a function of duty ratio and transformer turns ratio. Power circuit of ac-dc flyback converter, steady state analysis, unity power factor operation, closed loop control structure.

COMPUTER AIDED POWER SYSTEM

IV B.Tech-VII Semester (Code: 18EED34)

Lectures	4	Tutorial	0	Practical	0	Credits	3
Continuous Internal Assessment			50	Semester End Examination (3 Hours)			50

Prerequisites: Mathematics-I, Power System-II

Course Objectives: To make the students

CO1: To form incidence matrices and to prepare primitive impedance and admittance matrices with and without mutual coupling

CO2: To deal with the numerical methods studied in applied mathematics courses to get the solutions of load flow and comparison of different methods.

CO3: To teach the methods of mathematical formulation of complex power system and short circuit calculations.

CO4: To analyse the Contingency situations in the power system network

CO5: To understand the Transient Stability analysis of power system

Course Outcomes: Students will be able

CLO1: Acquire the knowledge of analysing power system network to get the primitive data with and without mutual coupling

CLO2: Develop proper mathematical models for analysis of a selected problem like load flow study or fault analysis.

CLO3: Identify the significance to conduct short circuit analysis of power system network for selection of protective devices

CLO4: Conduct contingency analysis.

CLO5: Identify transient stability problems in power system.

UNIT – I

Incidence & Network Matrices: Introduction to Graph Theory, Element-node incidence matrix - reduced incidence matrix or bus incidence matrix - basic loop incidence matrix - augmented loop incidence matrix - basic cut set incidence matrix - augmented cut set incidence matrix - branch path incidence matrix - concept of primitive network - primitive impedance and admittance matrices with and without mutual coupling - network performance equations - formation of network matrices using singular & nonsingular transformation.

UNIT – II

Formulation of Load Flow Problem: Introduction – nonlinear equations - Power Flow Solution Algorithms solution techniques using Gauss iterative, Gauss Seidal Power Flow Equations, Newton Raphson Load Flow Method, Fast Decoupled Load Flow Method and DC Load Flow Methods. AC-DC System Power Flow Analysis- Sequential and Simultaneous Solution Algorithms.

UNIT – III

Algorithm for formation of network matrices: Formation of bus admittance and bus impedance matrices and respective algorithms - modifications of bus impedance and admittance matrices for

BAPATLA ENGINEERING COLLEGE :: BAPATLA

(Autonomous)

changes in the networks with and without mutual coupling. Representation of three phase network elements for balanced and unbalanced systems.

Short Circuit studies: Short circuit calculations for symmetrical and unsymmetrical faults using Bus Impedance matrix.

UNIT – IV

Security Analysis: Basic Concepts, Static Security Analysis at Control Centers, Contingency Analysis, Importance of contingency analysis, Contingency Selection.

Formulation of Transient Stability Problem: Transient Stability Analysis of Multi-Machine Systems, Eigen Analysis of Dynamical Systems, Small Signal Stability Analysis using Classical Model. Flow chart for digital simulation of transient stability problem. Infinite bus using swing equation for the machine and incorporating excitation (IEEE, 1981) turbine and speed governor controls.

INDUSTRIAL MANAGEMENT & ENTREPRENEURSHIP

IV B.Tech-VIII Semester (Code: 18ME002)

Lectures	4	Tutorial	0	Practical	0	Credits	3
Continuous Internal Assessment			50	Semester End Examination (3 Hours)			50

Course Objectives:

CO1: To provide students an insight into the concepts of industrial management and various forms of business organizations

CO 2: It aims to provide the students with an understanding of basics of production systems, productivity and quality.

CO 3: To enable the students to understand the inventory control concept.

CO 4: To make the students to learn various financial aspects of the business

CO 5: To know the depreciation and its methods of measuring depreciation.

CO 6: To Provide an understanding of personnel management.

CO 7: Students are exposed to know the importance of Entrepreneurship

CO 8: To impart the knowledge of marketing to the students

Learning Outcomes:

After completion of the course the student must be able to

CLO-1: Describe the roles & the responsibilities and various functions of the management. Learn various forms of business organizations and its dynamics

CLO-2: Understand concepts of productivity and know the ways of enhancing productivity. Develop knowledge about inventory control.

CLO-3: Learn how depreciation occurs and various methods of calculating depreciation. Understand various motivation theories and leadership styles.

CLO-4: Grasp complete knowledge of importance of entrepreneurship and its prerequisites.

UNIT – I

General Management: Management definition, Functions of Management and Principles of Management.

Scientific Management: Definition, Principles of Scientific Management.

Forms of Business Organization: Choice of form of organization, Salient features of Sole Proprietorship, Partnership, Joint Stock Company: Private Limited and Public Limited companies; Cooperative societies, Public sector organizations, State ownership, Public corporation, Merits and demerits of above types.

Introduction to Strategic Management: Definition and scope

UNIT – II

Human Resource Management: Functions of HR management, human resource planning, recruitment, selection, placement, training & development and performance appraisal, Motivation theories, leadership styles.

Marketing Management: Concepts of Selling and Marketing, Functions of Marketing, Marketing mix (4 Ps); Advertising and sales promotion; Product life cycle; distribution channels

BAPATLA ENGINEERING COLLEGE :: BAPATLA

(Autonomous)

UNIT – III

Materials Management: Inventory Control, Inventory costs, Basic EOQ model, Model with Price breaks, ABC analysis, FSN Analysis, VED Analysis.

Total Quality Management: Importance of quality, Difference between Inspection and Quality control, Components of total quality, Quality Function Deployment

Introduction to Supply Chain Management: Definition, scope of SCM, Drivers of SCM, Advantages, limitations

UNIT – IV

Financial Management: Functions of finance, Types of Capital-Fixed and Working Capital, Break Even Analysis.

Entrepreneurship Development: Introduction, Entrepreneurial characteristics, Functions of an Entrepreneur; Factors affecting entrepreneurship; Role of communication in entrepreneurship; Entrepreneurial development-Objectives, Need of Training for enterprises; Finance for the enterprises.

TEXT BOOKS:

1. Essentials of Management /Koontz and Heinz Weihrich/ Tata-McGraw-Hill 10th Ed.
2. Manufacturing Organization and Management / Amrine / Pearson Education
3. Management Science, A. R. Aryasri.
4. Industrial Engineering and production management by M Mahajan, Dhanapat rai Publications
5. Marketing Management, Philip Kotler.

CONSTITUTION OF INDIA IV B.Tech-VIII Semester (Code: 18HU001)

Lectures	3	Tutorial	0	Practical	0	Credits	0
Continuous Internal Assessment			50	Semester End Examination (3 Hours)			50

Course Objectives: To make the students

CO1: To understand the importance of constitution

CO2: To understand philosophy of fundamental rights and duties

CO3: To understand the central and state relation, financial and administrative.

CO4: To understand the autonomous nature of constitutional bodies like Supreme Court and high court, controller and auditor general of India and election commission of India.

Course Outcomes: Students will be able to

CLO1: Understand and explain the Fundamental rights.

CLO2: Explain the Fundamental duties and its importance.

CLO3: Explain about the uses of Panchayath Raj system in India and its duties.

CLO4: Understand the System of Election Commission and its functions.

UNIT-I

1. Meaning of the constitutional law and constitutionalism.
2. Historical perceptive of the constitution of India
3. Salient features and characteristics of the constitution of India.
4. Preamble, union and its territory and citizenship.

UNIT – II

5. Fundamental rights principles.
6. Directive principles of state policy.
7. Fundamental Duties.
8. The government of the union, the president, The Prime Minister, and the council of ministers, The parliament of India, The supreme court, the union judiciary

UNIT – III

9. The Machinery of Government in the states, The Governor, The Chief Minister and council of Ministers, The State legislature, High court, Judiciary in the states
10. Union territories.
11. The Federal System, Division of powers between centre and states, Legislative Administration and Financial relation.
12. Emergency Provisions, President Rule, National Emergency, Financial Emergency
13. Local self Government, Panchayat Raj, Municipalities and municipal Corporation.

UNIT IV

14. Miscellaneous Provisions, The comptroller and Auditor general of India, The Public Service Commission, Special Provisions relating to certain classes, Elections – Political parties.
15. Amendment of the Constitution.

PROJECT STAGE-I

IV B.Tech-VII Semester (Code: **18EEP01**)

Lectures: 0 periods/week	Tutorial: 0	Practical: 6	Self-Study: 0	Credits: 2
Continuous Internal Assessment : 50M		Semester End Examination (3 Hours) : 50M		

Course Outcomes: Students will be able to:

1. Able to select a problem in the chosen area of interest, understand and analyze the selected Problem.
2. Demonstrate the knowledge gained in the relevant subject /domain.
3. Able to improve communication and presentation skills.
4. Able to function effectively as a member or leader in a team.

It is aimed as a precursor to the project work done in the second semester of the final year B.Tech. It should help the students to identify their Research area/topic and should form the groundwork and preliminary research required for the project work. The batches formed for pursuing the project work in the final year shall select some research article published in the latest journals of IEEE, ACM and other related journals. Each batch should refer to a minimum of FIVE reference sources outside their prescribed textbooks. The batch must gain an understanding of the research tools used and the related material, available both in printed and digital formats. Each project batch must make the presentation for two rounds on the same research article about their understanding, conclusion and if possible propose the extensions for the work. Each individual of the batch must give the presentation in both the rounds.

At the end of the semester, the batch must submit a report in IEEE format, on the work they have pursued throughout the semester containing

- The aim and objective of the study.
- The Rationale behind the study.
- The work already done in the field and identified.
- Hypothesis, experimentation and discussion.
- Conclusion and further work possible
- Appendices consisting of illustrations, Tables, Graphs etc,

Evaluation is to be done for the two presentations made and the report submitted. Method of Continuous Internal Assessment (CIE):

1	Day to day work	10 Marks
2	Seminar – I	15 Marks
3	Term Paper Report	10 Marks
4	Seminar – II	15 Marks
	Total	50 Marks

Semester End Examination (SEE) shall be conducted for 50 Marks by one internal and one external examiner appointed by the principal. The SEE contains Viva-voce and the demonstration of the model developed or work performed as a part of the term paper.

POWER SYSTEMS LAB

IV B.Tech-VII Semester (Code:
18EEL72)

Lectures	0	Tutorial	0	Practical	3	Credits	1
Continuous Internal Evaluation			50	semester End Examination(3 hours)			50

Prerequisites: **Mathematics, PDS,RES.**

Course Objectives: To make the students

CO1: Analyze the performance of transmission line

CO2: Able to do Experiment in various protection of generator, feeder and transmission line using relays and circuit breakers

CO3: Able to conduct testing about the various electromagnetic relays

CO4: Be competent in use of static and digital relays.

CO5: Develop simulation model for RES

Course Outcomes: Students will be able to

CLO1: Analyze the performance of transmission line

CLO2: Examine various protection of generator, feeder and transmission line using relays and circuit breakers

CLO3: Execute testing about the various electromagnetic relay

CLO4: Competent in use of static and digital relays.

CLO5: Analyze simulation model for RES

LIST OF EXPERIMENTS:

1. Determination of ABCD parameters/regulation and efficiency of transmission line model.
2. Characteristics of IDMT over current relay/ over voltage electromagnetic relay.
3. Finding the sequence impedances of 3-phase synchronous machine.
4. Reactive power compensation using tap changing transformer.
5. Surge impedance loading of transmission line model.
6. Find cable fault using cable fault locator/Find hotspots using thermal image camera.
7. To study characteristics of MCB & HRC Fuse.
8. Test to find out polarity, ratio and magnetization characteristics of CT and PT.
9. Study on (i) on load Time Delay Relay (ii) off load Time Delay Relay.
10. Characteristics of over current/earth fault using numerical relay.

BAPATLA ENGINEERING COLLEGE :: BAPATLA

(Autonomous)

11. Characteristics of numerical distance relay.
12. Characteristics of numerical differential relay.
13. Identifying and Measuring the parameters of solar PV module in the field.
14. Series and parallel connection of PV Modules
15. Study of Solar / wind turbine generator power

plant. Note: Minimum 10 experiments should be

conducted.

ELECTRONICS DESIGN LAB

IV B.Tech-VII Semester (Code: 18EEL73)

Lectures	2	Tutorial	0	Practical	3	Credits	2
Continuous Internal Assessment			50	Semester End Examination (3 Hours)			50

Prerequisites: Basic Knowledge of C-programming, Basic of Electronics.

Course Objectives: To make the students

CO1: Able to get a basic knowledge on ARDUINO-UNO and it's various basic applications.

CO2: To familiarize on PCB design software and design basic Analog circuits.

CO3: Able to get basic knowledge on RASPBERRY-PI and its various basic Applications.

CO4: Able to learn to build various Electrical Applications using ARDUINO-UNO and RASPBERRY-PI.

Course Outcomes: Students will be able

CLO1: Design different projects using ARDUINO-UNO.

CLO2: Design of PCB for various applications.

CLO3: Design different projects using RASPBERRY-PI.

CLO4: Design of digital voltmeter and servo motor using ARDUINO-UNO and RASPBERRY-PI.

LIST OF EXPERIMENTS:

1. Arduino UNO based relay control.
2. Design of Digital Thermometer using Arduino UNO & LM35 Temperature sensor.
3. Vibration sensor using Arduino UNO.
4. Obstacle Detector using Arduino UNO.
5. WIFI based RASPBERRY control of Electrical appliances.
6. Design and control of a Servo motor.
7. Digital Arduino Voltmeter.
8. Smart Street light intensity control system.
9. Line follower Robot.
10. Design the PCB Layout for full wave rectifier circuit.
11. Design of single sided PCB Layout for Common Emitter Amplifier (CE).
12. Design of single sided PCB Layout for Full adder circuit.
13. Design and create single sided PCB Layout for Flashing LEDs using 555 IC.
14. Raspberry Pi controlled LED.
15. Raspberry Pi controlled stepper motor.

Note: Minimum 10 experiments should be conducted.

INTERNSHIP

IV B.Tech-VII Semester (Code: 18EEL74)

Lectures	-	Tutorial	-	Practical	-	Credits	2
Continuous Internal Assessment			100	Semester End Examination (3 Hours)			-

GUIDELINES AND EVALUATION OF INTERNSHIP PROGRAM

- The Internship is planned in an organization of student choice for a minimum of 4 weeks and maximum of 8 weeks for all the students who are eligible to write their 6th semester end examinations.
- There will be two supervisors for the student, i.e., internal faculty supervisor allotted by the HOD and company/industry supervisor allotted by the chosen industry/company.
- The HOD will issue the recommendation letter to the students in the first week of every April for the students who are eligible to write their 6th semester end examinations. The students should submit the acceptance letter from the company to the HOD in the first week of May. Exceptions, if any, will be subject to approval by the HOD. HOD shall accept such late registration only if it is a genuine case.
- Hundred per cent attendance is expected from the student intern. However, student intern is permitted to avail a maximum of five days leave during the IP (Internship Program) period with prior approval from the Company/Industry Supervisor. Absence without prior intimation will be considered a serious offense and even lead to the Internship Program's termination based on the severity of the problem. Beyond five days, there will be a penalty of 2 marks per day of leave from the aggregate Internship Program marks.
- Student intern should maintain high professional and social standards at their respective internship company. It is expected that the student should be regular, punctual, obedient, and honest at work. The unprofessional behaviour, irregularity, misconduct, indiscipline at work, and unsatisfactory performance will lead to the cancellation of the concerned student's Internship.
- Student should submit their presentation to the department for final assessment. Non-submission of any reports or not attending the presentation should be treated as absence for the evaluation component which will lead to "FAIL" grade.
- The evaluation shall be carried out at different stages viz. First, Second and Final Assessment. The weekly report to be submitted by a student intern to respective faculty guide. IP is evaluated for a maximum of 100 marks.
- The student intern shall submit the Internship Completion Certificate duly signed by the Company Supervisor upon completion of Internship.

BAPATLA ENGINEERING COLLEGE :: BAPATLA

(Autonomous)

- **Weightage for Evaluation:**

The various stages of evaluation and weightage at each stage are given below:

Stage	Marks	Remarks
First Assessment-End of 1 st week for 4 weeks Internship/ End of 2 nd week for 8 weeks of internship	20 M	Company Supervisor will assess the interns in the internship company premises. Company supervisor assesses the intern for 20 marks. The guide will go through the Regularity, Technical competencies; Analysis & Understandings and Designing of the concern project and assess the interns.
Second Assessment-End of 3 rd week for 4 weeks Internship/ End of 6 th week for 8 weeks of internship	40 M	Company Supervisor will assess the interns in the internship company premises. Company Supervisor assesses the intern for 40 marks. The guides will go through the Regularity, Technical competencies; Analysis & Understandings and Designing of the concern project and assess the interns.
Final Assessment- In the college premises	40 M	An External examiner and the HOD of the concern department acts as the committee to assess the intern's performance. Assessment will be for 40 Marks

POWER QUALITY

IV B.Tech – VIII Semester (Code: 18EED41)

Lectures	4	Tutorial	0	Practical	0	Credits	3
Continuous Internal Assessment			: 50	Semester End Examination (3 Hours)			: 50

Prerequisites: Power Electronics, Electrical Power Distribution System

Course Objectives: To make the students

CO1: Classify the power quality problems

CO2: Analyze voltage sag and voltage swell problems and suggest preventive techniques

CO3: Identify the harmonic sources and the effects of harmonic distortion

CO4: Analyze the Power Quality Conditioners

Course Outcomes: Students will be able to

CLO1: Understand different types of power quality problems with their source of generation

CLO2: Understand To Design different methodologies for detection, classification and mitigation of power quality problems.

CLO3: Expected to practically design active & passive filters for harmonic elimination.

CLO4: Analyze the Power Quality Conditioners

UNIT – I

INTRODUCTION: Electric power quality phenomena - IEC and IEEE definitions - power quality disturbances - voltage fluctuations-transients-unbalance-waveform distortion-power frequency variations. Voltage variations - Voltage sags and short interruptions – flicker -longer duration variations.

UNIT – II

VOLTAGE SAGS AND INTERRUPTIONS :Sources of sags and interruptions, Estimating voltage sag performance, fundamental principles of protection, solutions at the end-use level, Motor-starting sags, utility system fault-clearing Issues.

TRANSIENT OVER VOLTAGES: Sources of over voltages, principles of over voltage protection, devices for over voltage Protection, utility capacitor-switching transients, utility system lightning protection.

UNIT – III

FUNDAMENTALS OF HARMONICS: Harmonics – sources – definitions & standards – impacts - calculation and simulation –harmonic power flow - mitigation and control techniques – filtering – passive and active

UNIT – IV

POWER QUALITY CONDITIONERS: Power Quality conditioners – shunt and series compensators - DSTATCOM - Dynamic voltage restorer - unified power quality conditioners - case studies

SMART GRID TECHNOLOGIES

IVB.Tech VIII-Sem ester (Code:18EED42)

Lectures	4	Tutorial	0	Practical	0	Credits	3
Continuous Internal Assessment			50	Semester End Examination (3 Hours)			50

Prerequisites: Fundamentals of Power System

Course objectives: To make the students

CO1: Understand the Basic concept of Smart Grid.

CO2: Understand the Information & Communications Technology for The Smart Grid.

CO3: Acquire Knowledge about Smart Metering and Advanced Metering infrastructure.

CO4: Know the operation of Demand Side Integration and Distribution Management Systems.

Course outcomes: At the end of this course, students will be able to

CLO1: Understand basic concept of Smart Grid importance.

CLO2: Describe Suitable Communication Network And Security System For Smart Grid.

CLO3: Analyze Operation of Smart Metering and Advanced Metering infrastructure.

CLO4: Analyze Operation of Demand Side Integration and Distribution Management Systems.

UNIT-I

Smart Grid: Introduction, Ageing Assets and Lack of Circuit Capacity, Thermal Constraints, Operational Constraints, Security of Supply, National Initiatives, Early Smart Grid Initiatives, Active Distribution Networks, Virtual Power Plant, Other Initiatives and Demonstrations, Overview of The Technologies Required for The Smart Grid.

UNIT-II

Data communication: Introduction, Dedicated and shared communication channels, Switching techniques, Communication channels, Layered architecture and protocols.

Communication technologies for the Smart Grid: Introduction- Communication technologies- IEEE 802 series, Mobile communications, Multi-protocol label switching, Power line communication. Standards for information exchange-Standards for smart metering Modbus, DNP3, IEC 61850.

Information security for the Smart Grid: Encryption and decryption, authentication, Digital signatures, Cyber security standards

UNIT-III

Smart Metering and Advanced Metering infrastructure: Introduction, smart metering – evolution of electricity metering, key components of smart metering, smart meters: an overview of the hardware used – signal acquisition, signal conditioning, analogue to digital conversion, computation, input/output, and communication. Communication infrastructure and protocols for smart metering- Home area network, Neighborhood Area Network, Data Concentrator, meter data management system, Protocols for communication. Advanced Metering infrastructure (AMI), AMI protocols – Standards and initiatives.

**MACHINE MODELLING & ANALYSIS**

IVB.Tech VIII-Sem ester (Code:18EED43)

Lectures	4	Tutorial	0	Practical	0	Credits	3
Continuous Internal Assessment		50	Semester End Examination (3 Hours)				50

Prerequisites:**Course Objectives (COs):**

After completion of this course, students will be able to

CO1: Understand the concepts of 2-axis representation of an electric machine

CO2: Know the concepts of representing transfer function model of Dc machine

CO3: Acknowledge the importance of Voltage and current Equations in stator reference frame

CO4: Develop the modeling Voltage and current Equations in state – space variable form 3-ph synchronous motor

Course Learning Outcomes (CLOs):

After completion of this course, students will be able to

CLO1: To understand the basic two-pole machine and identify the methods and assumptions in modelling of machines

CLO2: Develop the different frames for modelling of different AC machines and phase Transformations

CLO3: Acquire the voltage, current and torque equations for different machines.

CLO4: Analyses the Circuits model of a 3ph Synchronous motor and Voltage and current Equations in state – space variable form.

UNIT-I

Basic Two-pole DC machine – primitive 2-axis machine – Voltage and Current relationship – Torque equation. Mathematical model of separately excited DC motor and DC Series motor in state variable form – Transfer function of the motor – Numerical problems.

Mathematical model of D.C. shunt motor D.C. Compound motor in state variable form – Transfer function of the motor – Numerical Problems

UNIT-II

Liner transformation – Phase transformation (a, b, c to α , β , o) – Active transformation (α , β , o to d, q). Circuit model of a 3 phase Induction motor – Linear transformation – Phase Transformation – Transformation to a Reference frame – Two axis models for induction motor. dq model based DOL starting of Induction Motors.

BAPATLA ENGINEERING COLLEGE :: BAPATLA

(Autonomous)

UNIT-III

Voltage and current Equations in stator reference frame – equation in Rotor reference frame – equations in a synchronously rotating frame – Torque equation – Equations I state – space form.

UNIT-IV

Circuits model of a 3ph Synchronous motor – Two axis representation of Syn. Motor. Voltage and current Equations in state – space variable form – Torque equation. dq model based short circuit fault analysis- emphasis on voltage, frequency and recovery time.

TEXT BOOKS:

1. Analysis of electric machinery and Drive systems- Paul C. Krause , Oleg Wasynezuk, Scott D. Sudhoff, third edition, IEEE press,2013
2. Generalized Machine theory P.S. Bimbhra, Khanna Publishers, 2002

REFERENCE BOOKS:

1. Thyristor control of Electric Drives – Vedam Subramanyam, Tata McGraw-Hill Education, 1988
2. Power System Stability and Control – Prabha Kundur, EPRI.2006

ADVANCED ELECTRIC DRIVES

IV B.Tech – VIII Semester (Code: 18EED44)

Lectures	4	Tutorial	0	Practical	0	Credits	3
Continuous Internal Assessment			50	Semester End Examination (3 Hours)			50

Prerequisites: Electrical machines, Power Electronics.

Course Objectives: To make the students

CO1: Design controllers for closed-loop operation of separately excited DC motor drives.

CO2: Develop high performance IM using principles of Scalar control and Direct Torque Control.

CO3: Develop Vector controlled Induction Motor drives and PMSM drives

CO4: Implement control schemes for BLDC and Switched Reluctance Motor drives

Course Outcomes: Students will be able to

CLO1: Understand and Design controllers for closed-loop operation of separately excited DC motor drives.

CLO2: Design and analyze IM using Scalar control and Direct Torque Control.

CLO3: Design Develop Vector Controlled Induction Motor drives and PMSM drives.

CLO4: Design and Implement, control schemes for BLDC and Switched Reluctance Motor drives.

UNIT-I

Separately Excited DC-motor Drives: Introduction, Review of DC-motor drives, Speed control of a Separately excited DC motor through state-space Model, drive with controlled rectifiers and choppers, Review of controllers, need for anti-windup feature for integral controllers, Speed control of a separately excited DC drive with inner current loop and outer speed loop, Design of current loop with pole-zero cancellation, Design of speed loop with symmetrical optimization technique.

UNIT-II

Induction Motor drives: Implementation of V/f control with slip compensation scheme, Review of dq0 model of 3-Ph IM with simulation studies, Principle of vector control of IM, Direct Vector control, Indirect vector control with feed-forward, Indirect vector control in various frames of reference, Decoupling of vector control with feed forward compensation, Direct Torque Control of IM, Control of wound rotor induction machine, introduction to five-phase induction motor drives.

UNIT-III

Permanent Magnet Drives: PM Synchronous motors: Types, Construction, operating principle, Expression for torque, Model of PMSM, Implementation of vector control for PMSM, Introduction to BLDC drives.

UNIT-IV

Switched Reluctance Motor Drives: Review of Switched Reluctance Motor, Torque expression, converters for SRM drives, Control of SRM drives with hard and soft chopping techniques.

TEXT BOOKS:

1. Modern Power Electronics & AC Drives – B.K. Bose, Pearson, First edition
2. Electric Motor Drives: Modeling, Analysis and Control – R. Krishnan – Prentice Hall
3. Vector Control of Electric Drives: Peter Vas, Oxford Publishers.

ENERGY STORAGE SYSTEMS

IV-B.Tech VI-Sem ester (Code: **18EED51**)

Lectures	4	Tutorial	0	Practical	0	Credits	3
Continuous Internal Assessment			50	Semester End Examination (3 Hours)			50

Course objectives: To make the students

CO1: To understand the various types of energy storage technologies and thermal storage system.

CO2: To learn the concepts and types of batteries.

CO3: To make the students to get understand the concepts of Hydrogen and Biogas storage.

CO4: To provide the insights on Flywheel and compressed energy storage systems.

Course outcomes: At the end of this course, students will be able to

CLO1: Identify the energy storage technologies and thermal storage systems.

CLO2: Recognize the concepts and types of batteries.

CLO3: Diagnose the principle operations of Hydrogen and Biogas storage.

CLO4: Analyze the concepts of Flywheel and compressed energy storage systems.

UNIT-I

INTRODUCTION: Necessity of energy storage – types of energy storage – comparison of energy storage technologies – Applications

THERMAL STORAGE SYSTEM: Thermal storage – Types – Modeling of thermal storage units – Simple water and rock bed storage system – pressurized water storage system

UNIT-II

ELECTRICAL ENERGY STORAGE SYSTEM: Fundamental concept of batteries – measuring of battery performance, charging and discharging of a battery, storage density, energy density, and safety issues. Types of batteries – Lead Acid, Nickel – Cadmium, Zinc Manganese dioxide and modern batteries for example (i) zinc-Air (ii) Nickel Hydride, (iii) Lithium Battery

UNIT-III

HYDROGEN AND BIOGAS STORAGE: Hydrogen storage options – compressed gas – liquid hydrogen – Metal Hydrides, chemical Storage, Biogas storage - comparisons. Safety and management of hydrogen and Biogas storage - Applications.

INDUSTRIAL ELECTRICAL SYSTEMS

IV B.Tech – VIII Semester (Code: 18EED52)

Lectures	4	Tutorial	0	Practical	0	Credits	3
Continuous Internal Assessment			50	Semester End Examination (3 Hours)			50

Course Objectives: To make the students

CO1: Understand the electrical wiring systems for residential, commercial and industrial consumers, representing the systems with standard symbols and drawings, SLD.

CO2: Understand various components of industrial electrical systems.

CO3: Analyze and select the proper size of various electrical system components.

CO4: Solve problems involving with different AC and DC sources in electrical circuits.

Course Outcomes: Students will be able to

CLO1: Understand the electrical wiring systems for residential, commercial and industrial consumers, representing the systems with standard symbols and drawings, SLD.

CLO2: Understand various components of industrial electrical systems.

CLO3: Analyze and select the proper size of various electrical system components.

CLO4: Solve problems involving with different AC and DC sources in electrical circuits.

UNIT - I

Electrical System Components: LT system wiring components, selection of cables, wires, switches, distribution box, metering system, Tariff structure, protection components- Fuse, MCB, MCCB, ELCB, inverse current characteristics, symbols, single line diagram (SLD) of a wiring system, Contactor, Isolator, Relays, MPCB, Electric shock and Electrical safety practices.

Residential and Commercial Electrical Systems: Types of residential and commercial wiring systems, general rules and guidelines for installation, load calculation and sizing of wire, rating of main switch, distribution board and protection devices, earthing system calculations, requirements of commercial installation, deciding lighting scheme and number of lamps, earthing of commercial installation, selection and sizing of components.

UNIT - II

Illumination Systems: Understanding various terms regarding light, lumen, intensity, candle power, lamp efficiency, specific consumption, glare, space to height ratio, waste light factor, depreciation factor, various illumination schemes, Incandescent lamps and modern luminaries like

BAPATLA ENGINEERING COLLEGE :: BAPATLA

(Autonomous)

CFL, LED and their operation, energy saving in illumination systems, design of a lighting scheme for a residential and commercial premises, flood lighting.

UNIT - III

Industrial Electrical Systems I: HT connection, industrial substation, Transformer selection, Industrial loads, motors, starting of motors, single line diagram, Cable and Switchgear selection, Lightning Protection, Earthing design, Power factor correction – kVAR calculations, type of compensation, Introduction to PCC, MCC panels. Specifications of LT Breakers, MCB and other LT panel components.

UNIT – IV

Industrial Electrical Systems II: DG Systems, UPS System, Electrical Systems for the elevators, Battery banks, Sizing the DG, UPS and Battery Banks, Selection of UPS and Battery Banks.

Industrial Electrical System Automation: Study of basic PLC, Role of in automation, advantages of process automation, PLC based control system design, Panel Metering and Introduction to SCADA system for distribution automation.

TEXT BOOKS:

1. H. Joshi, “Residential, “Commercial and Industrial Electrical Systems”, McGraw Hill Education, 2007.

DIGITAL CONTROL SYSTEMS

IVB.Tech – VIII Semester (Code: 18EED53)

Lectures	4	Tutorial	0	Practical	0	Credits	3
Continuous Internal Assessment			50	Semester End Examination (3 Hours)			50

Prerequisites: Mathematics, Physics, Control Systems

Course Objectives: To make the students

CO1: Describe the concepts of digital control systems and assemble various components associated with it and usage of Z-transformations.

CO2: Calculate the difference equations in Discrete-Time control system and representation of discrete time control system using state space analysis

CO3: Assess controllability, observability and stability of control systems.

CO4: Create discrete time control systems by conventional methods and state feedback controllers

Course Outcomes: Students will be able to

CLO1: Understand z-transformations and their role in the mathematical analysis of different systems.

CLO2: Analyze state space models of discrete time systems.

CLO3: Evaluate stability analysis after determine the controllability and Observability of discrete time systems

CLO4: Design controller for discrete systems in conventional methods as well as state variable analysis methods.

UNIT – I

Sampling and Reconstruction: Introduction, Examples of Data Control Systems – Digital to Analog conversion and Analog to Digital conversion, sample and hold operations.

The Z – Transforms: Introduction, Linear difference equations, pulse response, Z – transforms, Theorems of Z – Transforms, the inverse Z – transforms, Modified Z- Transforms

UNIT – II

Z-Plane Analysis of Discrete-Time Control System: Z-Transform method for solving difference equations; Pulse transforms function, block diagram analysis of sampled – data systems, mapping between s-plane and z-plane.

State Space Analysis of Discrete time systems: State Space Representation of discrete time systems, Pulse Transfer Function Matrix solving discrete time state space equations, State

BAPATLA ENGINEERING COLLEGE :: BAPATLA

(Autonomous)

transition matrix and its Properties, Methods for Computation of State Transition Matrix, Discretization of continuous time state – space equations.

UNIT – III

Controllability and Observability: Concepts of Controllability and Observability, Tests for controllability and Observability. Duality between Controllability and Observability, Controllability and Observability conditions for Pulse Transfer Function.

Stability Analysis: Mapping between the S-Plane and the Z-Plane – Primary strips and Complementary Strips – Constant frequency loci, Constant damping ratio loci, Stability Analysis of closed loop systems in the Z-Plane. Jury stability test – Stability Analysis by use of the Bilinear Transformation and Routh Stability criterion.

UNIT – IV

Design of Discrete Time Control System by Conventional Methods: Transient and steady – State response Analysis – Design based on the frequency response method – Bilinear Transformation and Design procedure in the w-plane, Lead, Lag and Lead-Lag compensators and digital PID controllers.

State Feedback Controllers and Observers: Design of state feedback controller through pole placement – Necessary and sufficient conditions, Ackerman's formula. State Observers – Full order and Reduced order observers.

WAVELET TRANSFORMS

IV B.Tech – VIII Semester (Code: 18EED54)

Lectures	4	Tutorial	0	Practical	0	Credits	3
Continuous Internal Assessment			50	Semester End Examination (3 Hours)			50

Course Objectives: To make the students

CO1: Understand the fundamental of signal decomposition using Fourier transform, Short Time Fourier Transform and Wavelet Transform.

CO2: Analyze the signals using discrete wavelet transform.

CO3: Understand the concept of multi-resolution analysis.

CO4: Explain the wavelet reconstruction and applications of wavelet.

Course Outcomes: After completion of this course students will be able to

CLO1: Explain the signal decomposition using Fourier transform, Short Time Fourier Transform and Wavelet Transform.

CLO2: Analyze the signals using discrete wavelet transform.

CLO3: Apply multi-resolution analysis to the signals for decomposition.

CLO4: Explain the wavelet reconstruction and applications of wavelet.

UNIT I

Fundamentals of signal decomposition: Stationary and non-stationary signals. brief overview of Fourier transforms, Short-time Fourier transform (STFT). Introduction to wavelets, continuous wavelet transform - definition - scaling – shifting - scale and frequency. CWT as a correlation, time frequency resolution.

UNIT II

Discrete Wavelet Transform: Introduction to the DWT and orthogonal wavelet decomposition. One Stage filtering, Approximation and Details, Filter bank analysis. Multi resolution analysis. orthogonal wavelet decomposition based on the Haar wavelet – digital filter implementation of the Haar wavelet decomposition (Mallat's algorithm).

UNIT III

Multi Resolution Analysis: Construction of a general orthonormal MRA, formal definition, implication of the dilation equation and orthogonality. Introductory concepts of biorthogonal wavelet basis and wavelet packet synthesis. Two-dimensional wavelet decomposition, regularity, vanishing moments. Multilevel Decomposition, Number of levels

BAPATLA ENGINEERING COLLEGE :: BAPATLA

UNIT IV

Wavelet reconstruction: Reconstruction filter, Reconstructing Approximations and details, Multilevel Reconstruction. Signal energy, wavelet-based energy, and power spectra.

Typical Applications: Signal de-noising, fault detection and classifications.

PROJECT STAGE-II **IV B.Tech-VIII Semester (Code: 18EEP02)**

Lectures: 0 periods/week	Tutorial: 0	Practical:20	Self-Study: 0	Credits: 10
Continuous Internal Assessment : 75M		Semester End Examination (3 Hours) : 75M		

Course Outcomes: Students will be able to:

1. To design and develop a solution to the problem studied.
2. To apply the knowledge of domain, basic and engineering sciences to solve the problem.
3. To interpret and analyze the results for providing valid conclusions.
4. To develop lifelong learning ability through in depth study of selected area.

The Project work shall be carried out by a batch consisting of around four students for one semester. It should help the students to comprehend and apply different theories and technologies that they have learnt. It should lead to a substantial result as a comparative study, a new application of the technologies available or some extension to the works carried out by some researcher and published in referred journals. Each batch must carry out the analysis, design, implementation and testing of the entire project basing on the Electrical Engineering principles. There shall be multiple reviews made by the batch regarding:

- The idea/concept which forms the basis for their project shall be presented to the guide, Concerned in-charge and classmates and shall get the approval for Continuation.
- The analysis and design carried out.
- The implementation and the testing done.
- Over all Presentation of the work carried out and the results found out for the valuation under the internal Assessment.

A comprehensive is to be submitted at the end of the semester, which is certified by the concerned guide and the HOD.

There shall be an external examiner appointed by the COE to make an assessment and to carry out the Viva-Voce.
