BAPATLA ENGINEERING COLLEGE:: BAPATLA

(Autonomous) DEPARTMENT OF CYBER SECURITY & DATA SCIENCE

Scheme (w.e.f. 2020-2021)

4 Year B.Tech Program of Cyber Security

DEPARTMENT OF CYBER SECURITY BAPATLA ENGINEERING COLLEGE :: BAPATLA (AUTONOMOUS UNDER ACHARYA NAGARJUNA UNIVERSITY) (SPONSORED BY BAPATLA EDUCATION SOCIETY) BAPATLA - 522102 GUNTUR DISTRICT, A.P. www.becbapatla.ac.in

Course Structure Summary

S.No	Category	Credits	% of Credits
1	Humanities & Social Science including Management Courses	10.5	6.5
2	Basic Science Courses	18	11.5
3	Engineering Science courses including workshop, drawing, basics of electrical/mechanical/computer etc.	22.5	14.0
4	Professional Core Courses	48	23.5
5	Professional Elective Courses	12	7.5
6	Job Oriented/Open Elective Courses	16.5	10.5
7	Project work, seminar, and internship in industry or elsewhere	16.5	16.5
8	Skill Oriented Courses	16	10.0
9	Mandatory Courses [Environmental Science, PEHV, Indian Constitution, Essence of Indian Traditional Knowledge etc]	-	-
	Total	160	100

Semester Wise Credits Summary

Semester	Credits	With Honor Credits
Semester-I	16.5	16.5
Semester-II	22.5	22.5
Semester-III	21.5	21.5
Semester-IV	21.5	25.5
Semester-V	21.5	25.5
Semester-VI	21.5	25.5
Semester-VII	23	27
Semester-VIII	12	16
Total	160	180

List of Professional Electives:-	List of Job Oriented Electives:-
1. Introduction to Information Secur	ity and 1. Web & Data Security
Cyber Laws	2. Ethical Hacking & Social Engineering
2. Malware Analysis & Reverse	3. Intrusion Detection and Prevention System
Engineering	4. Secure Coding
3. Security Assessment & Risk Ana	lysis 5. Bio Metric Security
4. Information Theory & Audit Mon	nitoring 6. Digital Watermarking & Steganography
5. Cyber Crime Investigation and D	igital 7. Mobile Application Security
Forensics	8. Cloud Security
6. Protocols for Secure Electronic	9. IoT security
Commerce	
7. Block chain Technologies	
8. Wireless Networks	
9. Distributed Systems.	

List of Advanced Skill Oriented Elective:-

- 1. Introduction to Computer Animation
- 2. Full Stack Development
- 3. DevOps
- 4. Robotic Process Automation
- 5. Introduction to Game Design

List of Subjects offered under Honors in Cyber Security

Note: - Students have to acquire 20 credits for the award of Honors in Cyber Security.

- i. 16 credits (04 courses@ 4 credits each) shall be earned through the following list of courses.
- ii. 4 credits (02 courses@ 2 credits each) must be acquired through two MOOCs from the following list of courses with a minimum duration of 8/12weeks.
- iii. Before choosing those courses, students must complete prerequisites.
 - A. Advanced Data Structures.
 - B. Advanced Computer Architecture
 - C. Graph Theory
 - D. Numerical Optimization.
 - E. Advanced Database Systems
 - F. Real Time Operating Systems.
 - G. Parallel Algorithms.
 - H. Embedded Systems.
 - I. Secure Computation
 - J. Firewall & VPN Security
 - K. Network Security & Cyber Laws.
 - L. Cyberspace Operations and Design.
 - M. Applied Cryptography.
 - N. Security Governance, Risk and compliance.
 - O. Perception & Computer Vision.
 - P. Secure Software Design & Enterprise Computing

UNIT-2

(12 Hours)

(12 Hours)

SEMICONDUCTORS:

Introduction to semiconductors, intrinsic and extrinsic semiconductors, carrier concentrations, Fermi level and temperature dependence, Continuity equation, Diffusion and drift, P-N junction (V-I characteristics), Metal – Semiconductor junction (Ohmic and Schottky), Semiconductor materials of interest for opto- electronic devices.

UNIT-3 OPTO-ELECTRONIC DEVICES AND DISPLAY DEVICES:

Photo voltaic effect, principle and working of LED, Applications of Photo diode, Solar cell, PIN & APD Diode, Liquid crystal display, Opto electric effect: Faraday Effect and Kerr effect.

	UNIT-4 (12 Hours)													
NANO-MATERIA	ALS:													
materials, synthesis	o technology, quantum confinement, surface to volume ratio, properties of nan of nano-materials: CVD, sol-gel methods, laser ablation.													
Carbon nano tubes: types, properties, applications. Characterization of nano materials: XRD, SEM, applications of nano materials.														
Text Books :	 A text book of engineering physics by Avadhanulu an KshirsagarS.Chand& Co. (2013) Applied physics by Dr.<i>P.SrinivasaRao</i>. Dr.K.<i>Muralidhar</i> Introduction to solid state state physics, Charles Kittel, 8th edition Solid state physics, S.O. Pillai 	d

LIST OF EXPERIMENTS

- 1. Determination of acceleration due to gravity at a place using compound pendulum.
- 2. Study the variation of intensity of magnetic field along the axis of a circular coil usingStewart-Gee's apparatus.
- 3. Determination of thickness of thin wire using air wedge interference bands
- 4. Determination of radius of curvature of a Plano convex lens by forming Newton's rings..
- 5. Determination of wavelengths of mercury spectrum using grating normal incidencemethod.
- 6. Determination of dispersive power of a given material of prism using prism minimumdeviation method.
- 7. Draw the resonant characteristic curves of L.C.R. series circuit and calculate the resonant frequency.
- 8. Draw the characteristic curves of a photocell and calculate the maximum velocity of electron.
- 9. Verify the laws of transverse vibration of stretched string using sonometer.
- 10. Determine the rigidity modulus of the given material of the wire using Torsionalpendulum.
- 11. Draw the load characteristic curves of a solar cell.

- 12. Determination of Hall coefficient of a semiconductor.
- 13. Determination of voltage and frequency of an A.C. signal using C.R.O.
- 14. Determination of Forbidden energy gap of Si &Ge.
- 15. Determination of wavelength of laser source using Diode laser.

Any three experiments are virtual

UNIT-1

(12 Hours)

Overview of C, Constants, Variables and Data Types, Operators and Expressions, Managing I/O Operations. Decision Making and Branching.

Programming Exercises for Unit I: C-expressions for algebraic expressions, evaluation of arithmetic and Boolean expressions. Syntactic and logical errors in a given program, output of a given program, values of variables at the end of execution of a program fragment, Programs using Scientific and Engineering formulae. Finding the largest of the three given numbers. Computation of discount amount on different types of products with different discount percentages. Finding the class of an input character, finding the type of triangle formed with the given sides, computation of income-tax, finding given year is leap year or not, and conversion of lower case character to its uppercase.

Decision Making and Looping, Arrays, Character Arrays and Strings.

Programming Exercises for UnitII: To print the sum of the digits of a given number and to display the image of a given number. To find whether a given number is prime, printing Fibonacci sequence and to find prime factors of a given number. To print graphic patterns of symbols and numbers. To find the length of a string, compare strings, reverse a string, copy a string and to find whether the given string is palindrome or not with and without using String Handling Functions. Transpose of a matrix and sorting of names using arrays.

UNIT-3

(12 Hours)

User-defined Functions, Structures and Unions, Pointers

Programming Exercises for Unit -III: Functions-Recursive functions to find factorial & GCD (Greatest Common Divisor), string operations using pointers and pointer arithmetic. Swapping two variable values. Sorting a list of student records on register number using array of pointers.

	UNIT-4	(12 Hours)							
File Management in C, Dynamic Memory Allocation, Preprocessor									
e									
0 0	Exercises for Unit - IV: Operations on complex numbers, and to re	*							
file of marks an	d generate a result file, sorting a list of names using command line	arguments.							
Copy the conter	Copy the contents of one file to another file. Allocating memory to variables dynamically.

UNIT-1

(12 Hours)

DIGITAL SYSTEMS AND BINARY NUMBERS: Digital System, Binary Numbers, Number base Conversions, Octal and Hexadecimal Numbers, Complements of Numbers, Signed Binary Numbers, Binary Codes, Binary Storage and Registers, Binary Logic, Error Detection and Correction: 7 bit Hamming Code.

BOOLEAN ALGEBRA & LOGIC GATES: Introduction, Basic definitions, Axiomatic definition of Boolean algebra, Basic theorems and properties of Boolean algebra, Boolean functions, Canonical and Standard Forms, Other Logic Operations, Digital logic gates.

GATE –**LEVEL MINIMIZATION**: Introduction, The map method, Four-variable K-Map, Product-of-Sums Simplification, Don't –Care Conditions, NAND and NOR implementation, Other Two level Implementations.

UNIT-2

(12 Hours)

MINIMIZATION: The Tabulation method, Determination of prime implicants, Selection of prime-implicants.

COMBINATIONAL LOGIC: Introduction, Combinational Circuits, Analysis Procedure, Design Procedure, Binary Adders - Subtractor, Decimal Adder, Magnitude Comparator, Decoders, Encoders, Multiplexers.

UNIT-3 (12 Hours)									
SYNCHRONOUS SEQUENTIAL LOGIC: Introduction, Sequential Circuits, Storage Elements -									
Latches, Storage Elements -Flip Flops, Analysis of Clocked Sequential Circuits: State Equations,									
State Table, State Diagram, Flip Flop Input Equations, Analysis with D, JK and T Flip Flops; State									
reduction and Assi	reduction and Assignment, Design Procedure.								
	UNIT-4 (12 Hours)								
REGISTERS an	REGISTERS and COUNTERS: Registers, Shift registers, Ripple Counters, Synchronous								
Counters.									
MEMORY and PROGRAMMABLE LOGIC: Introduction, Random Access Memory: Read and									
Write Operations, Types of Memories; Read Only Memory, Programmable Logic Devices: PROM,									
PLA, PAL.

LIST OF EXPERIMENTS

1. Introduction to Chemistry Lab (the teachers are expected to teach fundamentals like Calibration of Volumetric Apparatus, Primary, Secondary Solutions, Normality, Molarity, Molality etc. and error, accuracy, precision, theory of indicators, use of volumetric titrations).

2. Volumetric Analysis:

- a. Estimation of Washing Soda.
- b. Estimation of Active Chlorine Content in Bleaching Powder
- c. Estimation of Mohr's salt by permanganometry.
- b. Estimation of given salt by using Ion-exchange resin using Dowex-50.

3. Analysis of Water:

- a. Determination of Alkalinity of Tap water.
- b. Determination of Total Hardness of ground water sample by EDTA method
- c. Determination of Salinity of water sample.

4. Estimation of properties of oil:

- a. Estimation of Acid Value
- b. Estimation of Saponification value.

· ·	on of Soap on of Urea-formaldehyde resin
c. Preparatio	n of Phenyl benzoate.
Text Books :	1. Practical Engineering Chemistry by K.Mukkanti, Etal, B.S. Publicaitons, Hyderabad, 2009.
	 Inorganic quantitative analysis, Vogel, 5th edition, Longman group Ltd. London, 1979.
References :	 Text Book of engineering chemistry by R.n. Goyal and HarrmendraGoel. A text book on experiments and calculations- Engineering Chemistry. S.S. Dara.
	3. Instrumental methods of chemical analysis, Chatwal, Anand, Himalaya Publications.

The Estimation of variances, Hypotheses concerning one variance, Hypotheses Concerning two variances, Estimation of proportions, Hypotheses concerning one proportion, Hypotheses concerning several proportions, Procedure for Analysis of Variance (ANOVA) for comparing

the means of k (>2) groups- one way classification (Completely randomized designs), Procedure for Analysis of Variance (ANOVA) for comparing the means of k (>2) groups- two way classification (Randomized block designs).

(Sections 9.1, 9.2, 9.3, 10.1, 10.2, 10.3, 12.2, 12.3 of Text Book [1]) UNIT-4

(12 Hours)

Multivariate Analysis: The concept of bivariate relationship, scatter diagram, Pearson^{*}s correlation and correlation matrix. Simple linear regression model and assumptions, Least Squares Estimation of the parameters of the model, Testing the significance of the model. Regression versus Correlation, Multiple linear regression model with k explanatory variables and assumptions of the model. Test for significance of the regression model and individual regression coefficients. Applications of multiple regression analysis.

Iteration	i: up	dati	ng variables, the while statem	ent, infinite loops and break, finish	ing ite	ration

Iteration: updating variables, the while statement, infinite loops and break, finishing iterations with continue, definite loops using for, loop patterns.

Strings: string is a sequence, getting the length of a string using len, traversal through a string with a loop, string slices, strings are immutable, looping and counting, the in operator, string comparison, string methods, parsing strings, format operator.

Files I/O:persistence, opening files, text files and lines, reading files, searching through a file, letting the user choose the file name, using try except and open, writing files.

Lists: a list is a sequence, lists are mutable, traversing, operations, slices, methods, deleting elements, functions, strings, parsing lines, objects and values, aliasing, arguments.

Dictionaries: dictionary as a set of counters, dictionaries and files, looping and dictionaries, advanced text parsing.

Tuples: tuples are immutable, comparing tuples, tuple assignment, dictionaries and tuples, multiple assignment with dictionaries, the most common words, using tuples as keys in dictionaries, sequences.

Object-Oriented Programming: Managing Larger Programs, Using Objects, starting with Programs, Subdividing a Problem–Encapsulation, First Python Object, Classes as Types, Object Lifecycle, Many Instances, Inheritance.

Using Databases and SQL: Database concepts, Database Browser for SQLite, creating a database table, Structured Query Language summary, Basic data modeling, Programming with multiple tables, three kinds of keys, Using JOIN to retrieve data.

LIST OF EXPERIMENTS

- 1. Write a python program to check if the number is positive or negative or zero and display an appropriate message.
- 2. Write a python program to take a string from user and count number of vowels present and percentage of vowels in it.
- 3. Write a python program to find the most frequent words in a text file.
- 4. Write a Python Program to Find the Sum of first n Natural Numbers.
- 5. Write a python program to find the numbers which are divisible by 7 and multiple of 5 between 1500 and 2700.
- 6. Write a Python Program to solve Quadratic Equation.
- 7. Create a program that ask the user for a number and then prints out a list of all the divisors of that number.
- 8. Write a Python Program to Find HCF or GCD.
- 9. Write a Python Program to Find LCM.
- 10. Write a Python program to construct the following pattern, using a nested loop number.
 - 1 22 333 4444 55555 666666
- 11. Write a Python Program to sort the given words in Alphabetic Order.
- 12. Write a Python function to create the HTML string with tags around the word(s).
- 13. Write a Python program to reverse words in a string.
- 14. Write a Python program to strip a set of characters from a string.
- 15. Write a python function to find the maximum and minimum of a list of numbers.
- 16. Write a Python Program to Find the Square Root.
- 17. Write a Python Program to Convert Decimal to Binary Using Recursion.
- 18. Write a python recursive function to a find the factorial of a given number.
- 19. Write a python program to find the longest word in each line of given file.

20. Write a Python program to combine each line from first file with the corresponding line in second file.

- 21. Write a Python program to read a random line from a file.
- 23. Write a Python program to split a list every Nth element.
 - Sample list: ['a', 'b', 'c', 'd', 'e', 'f', 'g', 'h', 'i', 'j', 'k', 'l', 'm', 'n']

Expected Output: [['a', 'd', 'g', 'j', 'm'], ['b', 'e', 'h', 'k', 'n'], ['c', 'f, 'i', 'l']]

- 24. Write a Python program to compute the similarity between two lists.
 - Sample data: ["red", "orange", "green", "blue", "white"], ["black", "yellow", "green", "blue"]
 - Expected Output:
 - Color1-Color2: ['white', 'orange', 'red'] Color2-Color1: ['black', 'yellow']
- 25. Write a Python program to replace the last element in a list with another list.
 - Sample data: [1, 3, 5, 7, 9, 10], [2, 4, 6,8] Expected Output: [1, 3, 5, 7, 9, 2, 4, 6, 8]
- 26. Write a Python program to find the repeated items of a tuple.
- 27. Write a Python program to convert a list with duplicates to a tuple without duplicates.
- 28. Write a Python program to reverse the elements of a tuple.
- 29. Write a Python program to replace last value of tuples in a list.
 - Sample list: [(10, 20, 40), (40, 50, 60), (70, 80, 90)]
 - Expected Output: [(10, 20, 100), (40, 50, 100), (70, 80, 100)]
- 31. Write a Python program to combine two dictionaries by adding values for common keys.

de	finit(self, name, eid):
	In Python 3.0+, "super()init(name)" also works"
	<pre>super(Employee, self)init(name)</pre>
	self.empID = eid

LIST OF EXPERIMENTS

- 1. Write a program to perform the following operations on Array List a). Creation, b). Insertion, c). Deletion, d). Search, e). Display.
- 2. Write a program that reads two lists of elements, prints them, reverses them, prints the reverse list, sort the lists, print the sorted lists, merges the list, prints merge list using array list.
- 3. Write a program to perform the following operations on Single Linked List. a). Creation, b). Insertion, c). Deletion, d). Search, e). Display.
- 4. Write a program to perform the following operations on Doubly Linked List. a). Creation, b). Insertion, c). Deletion, d). Search, e). Display.
- 5. Write a program to perform addition and multiplication of two polynomials using single Linked List.
- 6. Write a program to convert the given infix expression into postfix expression using stack.
- 7. Write a program to evaluate the postfix expression using stack.
- 8. Write a program that performs Radix sort on a given set of elements using queue.
- 9. Write a program to read n numbers in an array. Redisplay the array list with elements being sorted in ascending order using the following techniques

- a). Bubble Sort, b). Selection Sort, c). Insertion Sort, d).Shell Sort.
- 10. Write a program to perform Binary Search tree operations and traversals.
- 11. Write a program to implement AVL tree that interactively allows
- a). Insertion, b). Deletion, c). Find_min, d). Find_max.
- 12. Write a program to read n numbers in an array. Redisplay the arraylist with elements being sorted in ascending order using Heap Sort.

Pre-Requisit	te: No	ne.													
Course Obje	ectives	: Sti	udents v	will b	e able	e to									
Course Objectives: Students will be able to CO1 Understand advantages of OO programming over procedural oriented programming, learn the basics of variables, operators, control statements, arrays, classes and objects.															
CO2	Understand, write and implement the following concepts: Inheritance, Interfaces, Packages, Strings and Collections.														
CO3	Unde	Understand and write programs on Exception Handling, I/O, and Multithreading.													
CO4	Understand and implement applications using Applets, AWT, Swings and Events.

LIST OF EXPERIMENTS

- 1. Write a Java program to declare, initialize and accessing the elements of Single dimensional Arrays, Multidimensional Arrays.
- 2. Write a Java program to demonstrate recursion.
- 3. Write a Java program to demonstrate static member, static method and static block.
- 4. Write a Java program to demonstrate method overloading and method overriding using simple inheritance.
- 5. Write a Java program to demonstrate multiple inheritance using interfaces.
- 6. Write a Java program to demonstrate packages.
- 7. Write a Java program to demonstrate String class methods.
- 8. Write a Java program to create user defined exception class, use couple of built-in Exception classes.
- 9. Write a Java program to demonstrate inter-thread communication.
- 10. Write an Applet program to demonstrate passing parameters to Applet, Graphics, Color and Font classes.
- 11. Write a Java program to demonstrate handling Action events, Item events, Key events, Mouse events, Mouse Motion events.
- 12. Write a GUI application which uses the following AWT components Label, Text Field, Text Area, Checkbox, Checkbox Group, Button.
- 13. Write a GUI application using JTable, JTree, JCombo Box.

DESIGN AND ANALYSIS OF ALGORITHMS II B. Tech. – IV Semester (Code: 20CB404)															
Lectures	:	2				Hour		```				Assess	ment	:	30
Final Exam	:		hours		,							Marks		:	70
Pre-Requisit	e: Dat	a Strı	icture	es (20	CB3	02)									
Course Objectives: Students will be able to															
CO-1	Understand about designing and effectiveness of an algorithm, and applying of Master Theorem to find the complexity.														
CO-2	Strengthen divide and conquer paradigms andknow the optimal solution finding with the greedy method.														
CO-3	Acquaintance of algorithm design strategies of Dynamic programming and easy know the major graph algorithms and their analyses.														
CO-4	Get th	ne abi	lity to	o bac	ktracl	king,t	oranc	h witl	n bou	nd va	lues a	nd NI	P probl	ems.	
													_		
Course Lear	ning O	utco	mes:	Stude	ents v	vill be	able	e to							
CLO-1	Analyze the performance of algorithms through various strategies and apply the Master theorem to estimate the complexity of divide-and-conquer algorithms.														
CLO-2	Apply the divide-and-conquer and greedy techniques to solve problems and perform complexity analysis.														
CLO-3	Articulate on graph problems and identify the applicability of the dynamic- programming paradigm for designing solutions to problems.														
CLO-4	Find all possible solutions for combinatorial and optimixation problems using Backtracking and Branch and Bound algorithms and also categorize the P and NP complex problems.

Prim			hutes												
Primary Key Atributes: 1. SID (Sailor Entity)															
2. BID (Boat Entity)															
	(.			/											
Experiment 2: Working with DDL, DML, DCL and Key Constraints															
Creation, Altering and Dropping of Tables and Inserting Rows into a Table (Use Constraints While Creating Tables) Examples Using Select Command.															

Experiment 3: Working with Queries and Nested QUERIES

Queries (along with sub Queries) using ANY, ALL, IN, EXISTS, NOTEXISTS, UNION, INTERSET, Constraints

Expriment 4: Working with Queries USING Aggregate Operators & views

Queries using Aggregate Functions (COUNT, SUM, AVG, MAX and MIN), GROUP BY, HAVING and Creation and Dropping of Views

Experiment 5: Working with Conversion Functions & String Functions

Queries using Conversion Functions (TO_CHAR, TO_NUMBER AND TO_DATE), String Functions (CONCATENATION, LPAD, RPAD, LTRIM, RTRIM, LOWER, UPPER, INITCAP, LENGTH, SUBSTR AND INSTR), Date Functions (SYSDATE, NEXT_DAY, ADD_MONTHS, LAST_DAY, MONTHS_BETWEEN), LEAST, GREATEST, TRUNC, ROUND, TO_CHAR, TO_DATE

Experiment 6: Working with LOOPS using PL/SQL

Program Development using WHILE LOOPS, FOR LOOPS, Nested Loops using ERROR Handling.

Experiment 7: Working with Functions Using PL/SQL

Program Development using Creation of Stored Functions, Invoke Functions in SQL Statements and Write Complex Functions.

Experiment 8: Working with Stored Procedures

Programs Development using Creation of Procedures, Passing Parameters IN and OUT of

PROCEDURES

Experiment 9: Working with CURSORS

Develop Programs using Features Parameters in a CURSOR, FOR UPDATE CURSOR, WHERE CURRENT of Clause and CURSOR Variables.

Experiment 10: Working with Triggers using PL/SQL

Develop Programs using BEFORE and AFTER Triggers, Row and Statement Triggers and INSTEAD OF Triggers

1. Oracle PL/SQL by Example, Benjamin Rosenzweig, Elena Silvestrova,
Pearson Education 3rdEd
2. Oracle Database Logic PL/SQL Programming, ScottUrman, TataMc-Graw
Hill.
3. SQL and PL/SQL for Oracle 10g, Black Book, Dr.P.S.Deshpande

UNIT-I

15 Periods

Automata: Why Study Automata Theory, The central concepts of automata theory - Alphabets, Strings, Languages, Problems.

Finite Automata: An Informal picture of finite automata, Deterministic finite automata (DFA) - Definition of DFA, DFA processing strings, Notations for DFA, Extended transition function, the language of DFA, Non deterministic finite automata (NFA) – Definition of NFA, Extended transition function, the language of NFA, Equivalence of DFA and NFA.

Automata with ϵ transitions: Use of ϵ - transition, notation for an ϵ - NFA, Epsilon closures, extended transitions and languages, Eliminating ϵ - transitions.

BAPATLA ENGINEERING COLLEGE:: BAPATLA (Autonomous)

DEPARTMENT OF CYBER SECURITY & DATA SCIENCE

_	UNIT-2	(15 Periods)								
	pressions and Languages: Regular expressions, finite automata Algebraic laws of regular expressions.	and regular								
Properties of Regular Languages: Proving languages are not regular – Pumping lemma for										
regular languages, Applications of the pumping lemma, Closure Properties of Regular										
Languages, E	quivalence and minimization of automata – Minimization of DFA.									
	UNIT-3 (15 Periods)									
<i>(Construction based treatment & proofs are excluded)</i> Context Free Grammars: Context Free Grammars, Parse Trees, ambiguous grammars. Pushdown Automata: Definition of the Pushdown automata, the languages of PDA, Equivalences of PDA's and CFG's.										
Context free languages: Normal form's for context- Free grammars, the pumping lemma for context free languages.										
	UNIT-4	(15 Periods)								
	f Context free languages: closure properties for context free perties for CFL's.	e languages,								
	to Turing Machines: The Turing Machine, programming technique	ues forTuring								
machines. Undecidability: a language that is not recursively enumerable, an undecidable problem that is RE, Undecidability problems about TM, Post's Correspondence problem.										
		problem that

Data Communications & Networking Overview: A Communications Model, Data Communications, Data Communication Networking.

Protocol Architecture: The Need for a Protocol Architecture, A Simple Protocol Architecture, OSI, The TCP/IP Protocol Architecture.

Digital Data Communication Techniques: Asynchronous & Synchronous Transmission, Types of Errors, Error Detection, Error Correction.

UNIT-2	(16 Hours)
DATA Link Control: Flow Control, Error Control.	••••

Network Layer: Network Layer Design Issues: Store-and-Forward Packet Switching, Services Provided to the Transport Layer, Implementation of Connectionless Service, Implementation of Connection-Oriented Service, Comparison of Virtual-Circuit & Datagram Subnets.

Routing Algorithms: The Optimality Principle, Shortest Path Routing, Flooding, Distance Vector Routing, Link State Routing, Hierarchical Routing.

Congestion Control Algorithms: General Principles of Congestion Control, Congestion Prevention Policies, Congestion Control in Virtual-Circuit Subnets, Congestion Control in Datagram Subnets, Load Shedding, Jitter Control.

UNIT-3	(16 Hours)
Quality of Service: Requirements, Techniques for Achieving Good Qua	ality of Service The
Network Layer in the Internet: The IP Protocol, IP Addresses, Internet Con	ntrol Protocols. The

Transport Layer, The Transport Service: Services Provided to the Upper Layers, Transport Service Primitives, Berkeley sockets

Elements of Transport Protocols: Addressing, Connection Establishment, Connection Release, Flow Control and Buffering, Multiplexing, Crash Recovery.

UNIT-4(14 Hours)The Internet Transport Protocol (UDP): Introduction to UDP, Remote Procedure Call, The
Real-Time Transport Protocol.

The Internet Transport Protocols (TCP): Introduction to TCP, The TCP Service Model, The TCP Protocol, The TCP Segment Header, TCP Connection Establishment, TCP Connection Release, Modeling TCP Connection Management, TCP Transmission Policy, TCP Congestion Control, TCP Timer Management.

Application Layer: The Domain Name System (DNS): The DNS Name Space, Resource Records, Name Servers.

BUILDING THE ANALYSIS MODEL: Requirements Analysis, Analysis Modeling Approaches, Data Modeling Concepts, Flow-Oriented Modeling, Class Based Modeling Creating a Behavioral Model.

UNIT-3

(15 Periods)

DESIGN ENGINEERING: Design within the Context of Software Engineering, Design Process and Design Quality, Design Concepts The Design Model, Pattern Based Software Design.

CREATING AN ARCHITECTURAL DESIGN: Software Architecture, Data Design, Architectural Styles and Patterns, Architectural Design, Assessing Alternative Architectural Designs.

MODELING COMPONENT-LEVEL DESIGN: What Is a Component?, Designing Class-Based Components, Conducting Component-Level Design, Designing Conventional Components.

PERFORMING USER INTERFACE DESIGN: The Golden Rules, User Interface Analysis and Design, Interface Analysis, Interface Design Steps, Design Evaluation.

UNIT-4

(15 Periods)

SOFTWARE PROCESS AND PROJECT METRICS: Introduction: Metrics Process and Project Domains, Software Measurement, Metrics for Software Quality, Integrating Metrics with Process.

SOFTWARE QUALITY ASSURANCE: Quality Concepts, Quality Movement, SQA, Software Reviews, Formal Technical Reviews, Formal Approaches to SQA, Software Reliability, ISO 9000 Quality Standards, SQA Plan.

SOFTWARE TESTING STRATEGIES: Strategic Approach, Strategic Issues, Test strategies for Conventional Software, White box testing, Black Box testing, Test strategies for Object Oriented Software, Validation Testing, System Testing, The Art of Debugging.

LIST OF EXPERIMENTS

Tool Required: StarUML

LIST OF EXPERIMENTS

- 16. Write down the problem statement for a suggested system of relevance.
- 17. Do requirement analysis and develop Software Requirement Specification Sheet(SRS) for suggested system.
- 18. To perform the function oriented diagram: Data Flow Diagram (DFD) and Structured chart.
- 19. To perform the user's view analysis for the suggested system: Use case diagram.
- 20. To draw the structural view diagram for the system: Class diagram, object diagram.
- 21. To draw the behavioral view diagram : State-chart diagram, Activity diagram
- 22. To perform the behavioral view diagram for the suggested system : Sequence diagram,Collaboration diagram
- 23. To perform the implementation view diagram: Component diagram for the system.
- 24. To perform the environmental view diagram: Deployment diagram for the system.
- 25. To perform various testing using the testing tool unit testing, integration testing for a samplecode of the suggested system.

Note: Minimum 8 experiments should be carried.

List of Practical's

Choose any one project and do the above exercises for that project

- 1. Student Result Management System
- 2. Library management system
- **3.** Inventory control system
- 4. Accounting system
- 5. Fast food billing system
- 6. Bank loan system
- 7. Blood bank system
- 8. Railway reservation system
- 9. Automatic teller machine
- **10.** Video library management system
- **11.** Hotel management system
- 12. Hostel management system
- 13. E-ticking
- 14. Share online trading
- **15.** Hostel management system
- 16. Resource management system
- 17. Court case management system

Traditional Production and Construction Technology: Social Conditions and Technological Progress, The Impetus for Metallurgy, Social Needs and Technological Applications, State Support of Technology, India and the Industrial Revolution.

History of Physics and Chemistry: Philosophy and Physical Science, Optics and Sound, The Laws of Motion, The Five Basic Physical Elements, Indian Ideas about Atomic Physics.

Traditional Art and Architecture and Vastu Shashtra: The Principles of Vastu are simpleUNIT-3(8 Hours)

Origin of Mathematics: The Decimal System in Harappa, Panini and Formal Scientific Notation, The Indian Numeral System, Emergence of Calculus, The Spread of Indian Mathematics, The Concept of Zero.

Astronomy and Astrology

TKS and the Indian Union: Protection and the Legislative Frameworks in India, Comment, Sui Generis System, Trade Secrets and Know-how, Geographical Indications Bill, Protection of Plan varieties and Farmers Rights Bill, Rights of Communities, Monitoring Information on Patent Applications World-wide.

UNIT-4	(8 Hours)
Common Yoga Protocol: Introduction, What is Yoga? Brief History and Develop	ment of Yoga,
The fundamentals of Yoga,	

General Guidelines for Yoga Practice: Before the practice, During the Practice, After the Practice, Food for Thought, How Yoga can Help.

Invocation, 2. Sadilaja/Cālana Kriyās /Loosening Practices,

Yogāsanas:

Standing Postures: Tāḍāsana (Palm Tree Posture), Vṛkṣāsana (The Tree Posture), Pāda-Hastāsana (The Hands to Feet Posture), Ardha Cakrāsana (The Half Wheel Posture), Trikonāsana (The Triangle Posture)

Sitting Postures: Bhadrāsana (The Firm/Auspicious Posture), Vajrāsana (Thunderbolt Posture), Usţrāsana (Camel Posture), Śaśakāsana (The Hare Posture), Vakrāsana (The Spinal Twist Posture),

Kapālabhāti 5. Prānāyāma: nadīśodhana or anuloma viloma prānāyāma (Alternate Nostril Breathing), Śītalī Prāņāyāma, Bhrāmarī Prāņāyāma (Bhrāmarī Recaka) 6. Dhyāna 7. Sankalpa 8. Śantih pātha
