DEPARTMENT OF COMPUTER SCIENCE AND ENGINEERING

VISION

• To produce Computer Science Engineers with Global Standards who can handle the challenges of the society and industry with their innovations and services.

MISSION

- To impart high quality education with effective teaching and learning process.
- To provide an environment where the students can handle research problems confidently.
- To prepare the students with latest technologies with fidelity towards industry.
- To inculcate professional ethics and human values in handling the engineering challenges.

PROGRAM EDUCATIONAL OBJECTIVES

PEO1: Choose diverse professional careers in software industry, research, academia, engineering, and administrative services.

PEO2: Apply the principles of basic sciences, mathematics and computer science to solve real world problems using digital computing systems.

PEO3: Analyze, design, implement and evaluate robust, scalable and cost-effective computer-based systems and processes in the industry with sustained self learning.

PEO4: Be aware of professional and ethical practices in the context of social impacts of computing.

Course Structure Summary

| S.No | Category | Credits | % of Credits |
|------|--|---------|--------------|
| 1 | Humanities & Social Science including Management Courses | 10.5 | 6.5 |
| 2 | Basic Science Courses | 18 | 11.5 |
| 3 | Engineering Science courses including workshop, drawing, basics of electrical/mechanical/computer etc. | 22.5 | 14.0 |
| 4 | Professional Core Courses | 48 | 23.5 |
| 5 | Professional Elective Courses | 12 | 7.5 |
| 6 | Job Oriented/Open Elective Courses | 16.5 | 10.5 |
| 7 | Project work, seminar, and internship in industry or elsewhere | 16.5 | 16.5 |
| 8 | Skill Oriented Courses | 16 | 10.0 |
| 9 | Mandatory Courses [Environmental Science, PEHV, Indian Constitution, Essence of Indian Traditional Knowledge etc] | - | - |
| | Total | 160 | 100 |

Semester Wise Credits Summary

| Semester | Credits | With Honor Credits |
|---------------|---------|--------------------|
| Semester-I | 16.5 | 16.5 |
| Semester-II | 22.5 | 22.5 |
| Semester-III | 21.5 | 21.5 |
| Semester-IV | 21.5 | 25.5 |
| Semester-V | 21.5 | 25.5 |
| Semester-VI | 21.5 | 25.5 |
| Semester-VII | 23 | 27 |
| Semester-VIII | 12 | 16 |
| Total | 160 | 180 |

List of Subjects offered under Honors in CSE

Note: - Students must acquire 20 credits for the award of Honors in CSE.

- i. 16 credits (04 courses@ 4 credits each) should be earned through the following list of courses.
- ii. 4 credits (02 courses@ 2 credits each) must be acquired through two MOOCs from the following list of courses with a minimum duration of 8/12weeks.
- iii. Before choosing those courses, students must complete prerequisites.

| Code | List of HONOR Courses | Mode |
|------|--|------------|
| A | Advanced Data Structures | Class Room |
| В | Advanced Computer Architecture | Class Room |
| С | Graph Theory | Class Room |
| D | Prompt Engineering & AI Tools | Class Room |
| Е | Advanced Database Systems | Class Room |
| F | Real Time Operating Systems | Class Room |
| G | Parallel Processing | Class Room |
| Н | Embedded Systems | Class Room |
| I | Web Mining | Class Room |
| J | High speed Networks | Class Room |
| K | Software Project Management | Class Room |
| L | Numerical Optimization | Class Room |

DEPARTMENT OF COMPUTER SCIENCE AND ENGINEERING

List of Subjects offered under Minor in CSE

Students must acquire 20 additional credits for the award of Minor in CSE.

- i. 16 credits (04 courses@ 4 credits each) should be earned through the following pool.
- ii. 04 credits (02 courses@ 2 credits each) must be acquired by two courses of the following list, through the MOOCs/NPTEL with a minimum duration of 8/12weeks.
- iii. Before choosing the courses from Minor Pool, students must complete prerequisites.

| | MINOR Courses |
|---|--|
| A | Computer System Architecture |
| В | Operating Systems |
| С | Data Structures using C |
| D | Object Oriented Programming using Java |
| Е | Discrete Mathematics |
| F | Statistics with R |
| G | Design & Analysis of Algorithms |
| Н | Database Management Systems |
| I | Software Engineering |
| J | Computer Networks |
| K | Web Application Programming |
| L | Artificial Intelligence |

UNIT-1 12 Hours

Linear Algebra: Rank of a Matrix; Elementary transformations of a matrix; Gauss-Jordan method of finding the inverse;

Consistency of linear System of equations: Rouches theorem, System of linear Non-homogeneous equations, System of linear homogeneous equations; vectors; Eigen values; properties of Eigen values (without proofs); Cayley-Hamilton theorem (without proof).

[Sections: 2.7.1; 2.7.2; 2.7.6; 2.10.1; 2.10.2; 2.10.3; 2.12.1; 2.13.1; 2.14; 2.15.]

UNIT-2 12 Hours

Differential Equations of first order: Definitions; Formation of a Differential equation; Solution of a Differential equation; Equations of the first order and first degree; variables separable; Linear Equations; Bernoulli's equation; Exact Differential equations.

Equations reducible to Exact equations: I.F found by inspection, I.F of a Homogeneous equation, In the equation M dx+ N dy=0.

(Autonomous)

DEPARTMENT OF COMPUTER SCIENCE AND ENGINEERING

Applications of a first order Differential equations: Newton's law of cooling; Rate of decay of Radio-active materials.

[Sections: 11.1; 11.3; 11.4; 11.5; 11.6; 11.9; 11.10; 11.11; 11.12.1; 11.12.2; 11.12.4; 12.6; 12.8]

UNIT-3

12 Hours

Linear Differential Equations: Definitions; Theorem; Operator D; Rules for finding the complementary function; Inverse operator; Rules for finding the Particular Integral; Working procedure to solve the equation; Method of Variation of Parameters;

Applications of Linear Differential Equations: Oscillatory Electrical Circuits.

[Sections: 13.1; 13.2.1; 13.3; 13.4; 13.5; 13.6; 13.7;13.8.1;14.1;14.5]

UNIT-4 12 Hours

Laplace Transforms: Definition; conditions for the existence; Transforms of elementary functions; properties of Laplace Transforms; Transforms of derivatives; Transforms of integrals; Multiplication by tⁿ; Division by t; Inverse transforms-Method of partial fractions; Other methods of finding inverse transforms; Convolution theorem(without proof);

Application to differential equations: Solution of ODE with constant coefficients using Laplace transforms.

[Sections:21.2.1; 21.2.2; 21.3; 21.4; 21.7; 21.8; 21.9; 21.10; 21.12; 21.13; 21.14; 21.15.1]

UNIT-1 12 Hours

Introduction: water quality parameters

Characteristics: Alkalinity, Hardness - Estimation & simple numerical problems,

Boiler Troubles - Sludges, Scales, Caustic embrittlement, boiler corrosion, Priming and foaming;

Internal conditioning- phosphate, calgon and carbonate methods.

External conditioning - Ion exchange process & Zeolite process WHO Guidelines, Potable water, Sedimentation, Coagulation, Filtration.

Disinfection methods: Chlorination, ozonization and UV treatment.

Salinity – Treatment of Brackish water by Reverse Osmosis and Electrodialysis.

UNIT-2 12 Hours

Thermodynamic functions: energy, entropy and free energy. Estimations of entropy and free energies. Free energy and emf. Cell potentials, the Nernst equation and applications.

Corrosion: Types of corrosion - Chemical or dry corrosion, Electrochemical or wet corrosion; Galvanic, stress, pitting and differential aeration corrosion; Factors effecting corrosion, **Corrosion control** – Cathodic protection, and electro plating (Au) & electrodes Ni plating.

(Autonomous)

DEPARTMENT OF COMPUTER SCIENCE AND ENGINEERING

| UNIT-3 | 12 Hours |
|--------|----------|
| | |

Fuels: Classification of fuels; Calorific value of fuels (lower, higher)

Solid fuels: Determination of calorific value (Bomb Calorimeter) & related problems, Coal ranking. **Liquid Fuels**: Petroleum refining and fractions, composition and uses. Knocking and anti- knocking Agents, Octane number and Cetane number; Bio fuels- Biodiesel, general methods of preparation and advantages

Gaseous fuels: CNG and LPG, **Flue gas analysis** – Orsat apparatus.

UNIT-4 12 Hours

Organic reactions and synthesis of a drug molecule

Introduction to reactions involving substitution (SN_1 , SN_2), addition (Markownikoff's and anti-Markwnikoff's rules), elimination (E_1 & E_2), Synthesis of a commonly used drug molecule.(Aspirin and Paracetamol)

Polymers: Conducting polymers: Classification, Intrinsic and Extrinsic conducting polymers and their applications. Plastics: Thermoplasts and thermosetting plastics, Bskelite and PVC.

Bio degradable polymers: types, examples-Polyhydroxybuterate (PHB), Polyhydroxybuterate-co-β-hydroxyvalerate (PHBV), applications.

| Hydroxy valerate | (111b v), applications. |

LIST OF EXPERIMENTS

1. Introduction to Chemistry Lab (the teachers are expected to teach fundamentals like Calibration of Volumetric Apparatus, Primary, Secondary Solutions, Normality, Molarity, Molality etc. and error, accuracy, precision, theory of indicators, use of volumetric titrations).

2. Volumetric Analysis:

- a. Estimation of Washing Soda.
- b. Estimation of Active Chlorine Content in Bleaching Powder
- c. Estimation of Mohr's salt by permanganometry.
- b. Estimation of given salt by using Ion-exchange resin using Dowex-50.

3. Analysis of Water:

- a. Determination of Alkalinity of Tap water.
- b. Determination of Total Hardness of ground water sample by EDTA method
- c. Determination of Salinity of water sample.

(Autonomous)

DEPARTMENT OF COMPUTER SCIENCE AND ENGINEERING

3. Instrumental methods of chemical analysis, Chatwal, Anand, Himalaya

4. Estimation of properties of oil: a. Estimation of Acid Value b. Estimation of Saponification value. 5. Preparations: a. Preparation of Soap b. Preparation of Urea-formaldehyde resin c. Preparation of Phenyl benzoate. Text Books: 1. Practical Engineering Chemistry by K.Mukkanti, Etal, B.S. Publicaitons, Hyderabad, 2009. 2. Inorganic quantitative analysis, Vogel, 5th edition, Longman group Ltd. London, 1979. References: 1. Text Book of engineering chemistry by R.n. Goyal and HarrmendraGoel. 2. | ENGLISH COMMUNICATION SKILLS LAB | | | | | | | | | | |
|----------------------------------|---|----------------------------------|-----------------------|---|----|--|--|--|--|--|
| | | IB. Tech. – I Semester (Code: 20 | OCSL103/ELL01) | | | | | | | |
| Practicals | : | 3 Hours/Week | Continuous Assessment | : | 30 | | | | | |
| Final Exam | : | 3 Hours | Final Exam Marks | : | 70 | | | | | |
| | | | | | | | | | | |

Pre-Requisite: None.

Course Objectives: Students will be able to

- To comprehend the importance, barriers and strategies of listening skills in English.
- To illustrate and impart practice Phonemic symbols, stress and intonation.
- To practice oral skills and receive feedback on learners' performance.
- To practice language in various contexts through pair work, role plays, group work and dialogue conversations

CO-1 Better understand the nuances of English language through audio- visual experience and group activities CO-2 Develop neutralization of accent for intelligibility CO-3 Build confidence to enhance their speaking skills CO-4 Use effective vocabulary both in formal and informal situations

Mapping of Course Outcomes with Program Outcomes & Program Specific Outcomes

DEPARTMENT OF COMPUTER SCIENCE AND ENGINEERING

Natural resources: Land: Land as a resource, Causes and effects of land degradation - Soil erosion, Desertification. **Forest:** Use of forests, Causes and effects of deforestation, Afforestation, Mining - benefits and problems. **Water:** Uses, floods and drought, Dams - benefits and problems.

Energy: Importance of energy, Environmental Impacts of Renewable and Non-renewable energy resources. Silent Valley Project and Narmada BachaoAndolan case studies

Sustainability: Definition, Concept and Equitable use of resources for sustainable development; Rain water harvesting and Watershed management. Fieldwork on Rain water harvesting and Watershed management.

UNIT-3 8 Hours

Pollution: Definition; Causes, effects and control of air, water and nuclear pollution; Chernobyl Nuclear Disaster case study; Solid Waste: urban, Industrial and hazardous wastes; Integrated waste management - 3R approach, composting and vermicomposting.

Environmental acts: Water and air (Prevention and Control of pollution) acts, Environmental protection act, Forest Conservation act.

UNIT-4 8 Hours

Environmental issues: Green House effect & Global warming, Ozone layer depletion, Acid rains, Green Revolution, Population Growth and environmental quality, Environmental Impact Assessment. Environmental Standards (ISO 14000, etc.)

Case Studies: Bhopal Tragedy, Mathura Refinery and TajMahal, and Ralegan Siddhi (Anna Hazare).

Field work: Visit to a local area to document environmental assets – Pond/Forest/Grassland. Visit to a local polluted site- Urban and industry/ Rural and Agriculture.

UNIT-1 12 Hours

Numerical Solution of Equations: Introduction; Solution of algebraic and transcendental equations: Bisection method, Method of false position, Newton-Raphson method; Useful deductions from the Newton-Raphson formula; Solution of linear simultaneous equations; Direct methods of solution: Gauss elimination method, Gauss-Jordan method, Factorization method; Iterative methods of solution: Jacobi's iterative method, Gauss-Seidel iterative method.

[Sections: 28.1; 28.2; 28.3; 28.5; 28.6; 28.7.1;28.7.2].

UNIT-2 12 Hours

Finite differences and Interpolation: Finite differences: Forward differences, Backward differences; Newton's interpolation formulae: Newton's forward interpolation formula, Newton's backward interpolation formula; Interpolation with unequal intervals; Lagrange's interpolation formula; Divided differences; Newton's divided difference formula; Numerical integration; Trapezoidal rule; Simpson's one-third rule; Simpson's three-eighth rule; Numerical solution of ODE's: Introduction; Picard's method; Euler's method; Runge-Kutta method.

(Autonomous)

DEPARTMENT OF COMPUTER SCIENCE AND ENGINEERING

[Sections:29.1; 29.1-1; 29.1.2; 29.6; 29.9; 29.10; 29.11; 29.12; 30.4; 30.6; 30.7; 30.8; 32.1; 32.2; 32.4; 32.7].

UNIT-3 12 Hours

Multiple Integrals: Double integrals; Change of order of integration; Double integrals in polar coordinates; Area enCOsed by plane curves; Triple integrals; Volumes of solids: Volume as Triple integrals, Change of variables.

[Sections: 7.1; 7.2; 7.3; 7.4; 7.5; 7.6.2; 7.7.2].

UNIT-4 12 Hours

Vector calculus and its Applications: Scalar and vector point functions; Del applied to scalar point functions-Gradient: Definition, Directional derivative; Del applied to vector point functions: Divergence, Curl; Line integral; Surfaces: Surface integral, Flux across a surface; Green's theorem in the plane (without proof); Stokes theorem (without proof); Gauss divergence theorem (without proof).

[Sections: 8.4; 8.5.1; 8.5.3; 8.6; 8.11; 8.12; 8.13; 8.14; 8.16]

Pre-Requisite: None.

Course Objectives: Students will be able to

- To understand basic Laws in circuits, analysis of simple DC circuits, Theorems and its applications, fundamentals of AC circuits & its analysis and concepts of three phase balanced circuits
- To learn basic properties of magnetic materials and its applications.
- To understand working principle, construction, applications and performance of DC machines, AC machines.
- To learn basic concepts, working principal, characteristics and applications of semiconductor diode and transistor family.
- To gain knowledge about the static converters and regulators.
- To learn basic concepts of power transistors and operational amplifiers closer to practical applications.

| Course Ou | Course Outcomes: Students will be able to | | | | | | | | |
|-----------|---|--|--|--|--|--|--|--|--|
| CO-1 | Solve problems involving with DC and AC excitation sources in electrical circuits. | | | | | | | | |
| CO-2 | Compare properties of magnetic materials and its applications | | | | | | | | |
| CO-3 | Analyze construction, principle of operation, application and performance of DC machines and AC machines. | | | | | | | | |
| CO-4 | Explore characteristics and applications of semiconductor diode and transistion family. | | | | | | | | |
| CO-5 | Make the static converters and regulators | | | | | | | | |
| CO-6 | Analyze concepts of power transistors and operational amplifiers closer to practical applications | | | | | | | | |

UNIT-1 12 Hours

Electrical Circuits

Electrical circuit elements (R, L and C), voltage and current sources, Kirchhoff current and voltage laws, analysis of simple circuits with dc excitation. Superposition, Thevenin and Norton Theorems. Representation of sinusoidal waveforms, peak and rms values, phasor representation, real power, reactive power, apparent power, power factor. Analysis of single-phase AC circuits consisting of R, L, C, RL, RC, RLC combinations (series and parallel), resonance. Three-phase balanced circuits, voltage and current relations in star and delta connections.

(Autonomous)

DEPARTMENT OF COMPUTER SCIENCE AND ENGINEERING

| UNIT-2 | 12 Hours |
|--------|----------|

Electrical Machines

Magnetic materials, BH characteristics, Construction, working of DC machines, ideal and practical transformer, equivalent circuit, losses in transformers, regulation and efficiency. Autotransformer and three-phase transformer connections. Generation of rotating magnetic fields, Construction and working of a three-phase induction motor, Significance of torque-slip characteristic. Loss components and efficiency, starting and speed control of induction motor. Single-phase induction motor. Construction and working of synchronous generators.

UNIT-3 12 Hours

Semiconductor Diodes and applications

Semiconductor materials, semiconductor diode, Resistance levels, Diode equivalent circuits, Zener diode, Light emitting diode, Load line analysis, half wave rectification, Full wave rectification, Bridge rectifier, Use of capacitor filter in rectifier, Zener diode voltage regulator, Clippers, Clampers

Bipolar Junction Transistors

Transistor construction and operation, Common base configuration, Transistor amplifying action, Common emitter configuration, Common collector configuration, Limits of operation. DC load line and bias point, Voltage divider bias of transistor.

UNIT-4 12 Hours

Field Effect Transistors

Construction and characteristics of JFET and MOSFET

Operational Amplifiers

Introduction, Differential and common mode operation, OP-AMP Basics, Practical OP-AMP circuits: Inverting amplifier, Non inverting amplifier, Unity follower, summing amplifier, Integrator and differentiator

UNIT-1 12 Hours

Overview of C, Constants, Variables and Data Types, Operators and Expressions, Managing I/O Operations. Decision Making and Branching.

Programming Exercises for Unit I: C-expressions for algebraic expressions, evaluation of arithmetic and Boolean expressions. Syntactic and logical errors in a given program, output of a given program, values of variables at the end of execution of a program fragment, Programs using Scientific and Engineering formulae. Finding the largest of the three given numbers. Computation of discount amount on different types of products with different discount percentages. Finding the class of an input character, finding the type of triangle formed with the given sides, computation of income-tax, finding given year is leap year or not, and conversion of lower case character to its uppercase.

|--|---|--------------|-----------------------|---|----|--|--|--|--|--|
| I B.Tech – I Semester (Code: 20CSL201/PHL02) | | | | | | | | | | |
| Practicals | : | 3 Hours/Week | Continuous Assessment | : | 30 | | | | | |
| Final Exam | : | 3 hours | Final Exam Marks | : | 70 | | | | | |

Pre-Requisite: None.

Course Objectives: Students will be able to

- This unit aim to build the foundation and inspires interest of freshmen into electrical and electronics and to focus on fundamental concepts and basic principles regarding electrical conduction.
- This unit provides various properties of semiconductor materials and their importance in various device fabrications
- This unit aim to educate the student on various opto-electronic devices and their applications.
- This unit provide information about the principles of processing, manufacturing and characterization of nano materials, nano structures and their applications

| Course Outcomes: Students will be able to | | | | | | | | | |
|---|---|--|--|--|--|--|--|--|--|
| CO-1 | Acknowledge the important aspects of earth magnetic field, realize the use of | | | | | | | | |
| CO-2 | Maxwells equations in various magnetic applications | | | | | | | | |
| CO-3 | Use the fundamentals of optics, one can estimate physical parameters. | | | | | | | | |
| CO-4 | Realization of material properties and parameters. | | | | | | | | |
| CO-4 | Realization of material properties and parameters. | | | | | | | | |

LIST OF EXPERIMENTS

- 1. Determination of acceleration due to gravity at a place using compound pendulum.
- 2. Study the variation of intensity of magnetic field along the axis of a circular coil using Stewart-Gee's apparatus.
- 3. Determination of thickness of thin wire using air wedge interference bands
- 4. Determination of radius of curvature of a Plano convex lens by forming Newton's rings..
- 5. Determination of wavelengths of mercury spectrum using grating normal incidencemethod.
- 6. Determination of dispersive power of a given material of prism using prism minimum deviation method.
- 7. Draw the resonant characteristic curves of L.C.R. series circuit and calculate the resonant frequency.
- 8. Draw the characteristic curves of a photocell and calculate the maximum velocity of electron.
- 9. Verify the laws of transverse vibration of stretched string using sonometer.
- 10. Determine the rigidity modulus of the given material of the wire using Torsionalpendulum.
- 11. Draw the load characteristic curves of a solar cell.
- 12. Determination of Hall coefficient of a semiconductor.

(Autonomous)

DEPARTMENT OF COMPUTER SCIENCE AND ENGINEERING

- 13. Determination of voltage and frequency of an A.C. signal using C.R.O.
- 14. Determination of Forbidden energy gap of Si &Ge.
- 15. Determination of wavelength of laser source using Diode laser.

Any three experiments are virtual

Text Books : Engineering physics laboratorymanual P. Srinivasarao & K. Muraldhar, Himalaya publications.

| Practicals | : | 3 Hours/Week | Continuous Assessment | : | 30 | | | | | |
| Final Exam | : | 3 Hours | Final Exam Marks | : | 70 | | | | | |

Pre-Requisite: None.

Course Objectives: Students will be able to

- To understand basic Laws in circuits, analysis of simple DC circuits, Theorems and its applications, fundamentals of AC circuits & its analysis and concepts of three phase balanced circuits
- To learn basic properties of magnetic materials and its applications.
- To understand working principle, construction, applications and performance of DC machines, AC machines.
- To learn basic concepts, working principal, characteristics and applications of semiconductor diode and transistor family.
- To gain knowledge about the static converters and regulators.
- To learn basic concepts of power transistors and operational amplifiers closer to practical applications.

| Course Out | Course Outcomes: Students will be able to | | | | | | | |
|------------|--|--|--|--|--|--|--|--|
| CO-1 | Solve Problems involving with DC and AC excitation sources in electrical circuits | | | | | | | |
| CO-2 | Compare properties of magnetic materials and its applications | | | | | | | |
| CO-3 | Analyze construction, principle of operation, application and performance of DC machines and AC machines | | | | | | | |
| CO-4 | Explore characteristics and applications of semi conductor diode and transistor family | | | | | | | |
| CO-5 | Make the static converts and regulators | | | | | | | |
| | | | | | | | | |

LIST OF EXPERIMENTS

- 1. Verification of KCL and KVL
- 2. Verification of Superposition theorem
- 3. Verification of Thevenin's theorem
- 4. Verification of Norton's theorem
- 5. Parameters of choke coil
- 6. Measurement of low and medium resistance using volt ampere method
- 7. OC & SC test of single phase transformer
- 8. Load test on single phase transformer
- 9. V-I characteristics of PN junction Diode

(Autonomous)

DEPARTMENT OF COMPUTER SCIENCE AND ENGINEERING

- 10. V-I characteristics of Zener Diode
- 11. Characteristics of CE Configuration
- 12. Transfer and Drain Characteristics of JFET
- 13. Calculation of Ripple factor using Half wave rectifier
- 14. Calculation of Ripple factor using Full wave rectifier
- 15. Non linear wave shaping clippers/clampers

Note: Minimum 10 experiments should be carried.

- 2. Write a C program to evaluate the following (using loops):
 - a) $1 + x^2/2! + x^4/4! + \dots$ upto ten terms
 - b) $x + x^3/3! + x^5/5! + ...$ upto 7 digit accuracy
- 3. Write a C program to check whether the given number is
 - a) Prime or not.
 - b) Perfect or Abundant or Deficient.
- 4. Write a C program to display statistical parameters (using one dimensional array).
 - a) Mean
 - b) Mode
 - c) Median
 - d) Variance.
- 5. Write a C program to read a list of numbers and perform the following operations
 - a) Print the list.
 - b) Delete duplicates from the list.
 - c) Reverse the list.
- 6. Write a C program to read a list of numbers and search for a given number using Binary search algorithm and if found display its index otherwise display the message "Element not found in the List".
- 7. Write a C program to read two matrices and compute their sum and product.
- 8. A menu driven program with options (using array of character pointers).
 - a) To insert a student name
 - b) To delete astudent name
 - c) To print the names of students
- 9. Write a C program to read list of student names and perform the following operations
 - a) To print the list of names.
 - b) To sort them in ascending order.
 - c) To print the list after sorting.
- 10. Write a C program that consists of recursive functions to
 - a) Find factorial of a given number
 - b) Solve towers of Hanoi with three towers (A, B & C) and three disks initially on tower A.
- 11. A Bookshop maintains the inventory of books that are being sold at the shop. The list includes details such as author, title, price, publisher and stock position. Whenever a customer wants a book the sales person inputs the title and the author, and the system searches the list and displays whether it is available or not. If it is not, an appropriate message is displayed, if it is, then the system displays the book details and request for the

(Autonomous)

DEPARTMENT OF COMPUTER SCIENCE AND ENGINEERING

number of copies required, if the requested copies are available the total cost of the requested copies is displayed otherwise the message "required copies not in stock" is displayed. Write a program for the above in structures with suitable functions.

12. Write a C program to read a data file of students' records with fields (Regno, Name, M1,M2,M3,M4,M5) and write the successful students data (percentage > 40%) to a data file.

| Lectures | : | 2 Hours /Week, 1 Hour Tutorial | Continuous Assessment | : | 30 | | | | | | |
| Final Exam | : | 3 hours | Final Exam Marks | : | 70 | | | | | | |
| | | | | | | | | | | | |

Pre-Requisite: None.

Course Objectives: Students will be able to

- The Aptitude to learn about the concept of random variables and their properties
- Evaluation of various Sampling Distributions
- > Statistical analysis for making decisions and choosing actions.
- The Capability to infer the meaningful conclusions to the given data using statistical methods like Point Estimation

| Course C | Course Outcomes: Students will be able to | | | | | | | | | | |
|----------|---|--|--|--|--|--|--|--|--|--|--|
| CO-1 | Apply discrete and continuous probability distributions to various problems arising | | | | | | | | | | |
| CO-1 | in Engineering applications. | | | | | | | | | | |
| CO-2 | Perform Test of Hypothesis for a population parameter for single sample. | | | | | | | | | | |
| CO-3 | Perform Test of Hypothesis for population parameters for multiple samples. | | | | | | | | | | |
| CO-4 | Interpret the results of correlation, regression and one way ANOVA for the given | | | | | | | | | | |
| CO-4 | data. | | | | | | | | | | |

Mapping of Course Outcomes with Program Outcomes & Program Specific Outcomes

UNIT-1 12 Hours

Continuous Random Variables, Normal Distribution, Normal Approximation to the Binomial Distribution, Uniform Distribution, Gamma Distribution and its applications, Beta Distribution and its applications, Joint Distributions (Discrete), Joint Distributions (Continuous). Populations and Samples, Law of large numbers, Central limit theorem and its applications, The sampling distribution of the mean (σ unknown), The sampling distribution of the variance.

(Sections 5.1, 5.2, 5.3, 5.5,5.7, 5.8, 5.10, 6.1, 6.2, 6.3, 6.4 of Text Book [1])

UNIT-2 12 Hours

Point estimation, Interval estimation, Tests of Hypotheses, Null Hypothesis and Tests of Hypotheses, Hypothesis concerning one mean, Comparisons-Two independent Large samples, Comparisons-Two independent small samples, Paired sample t test.

(Sections 7.1,7.2, 7.4, 7.5, 7.6, 8.2, 8.3, 8.4 of Text Book [1])

UNIT-3 12 Hours

The Estimation of variances, Hypotheses concerning one variance, Hypotheses Concerning two variances, Estimation of proportions, Hypotheses concerning one proportion, Hypotheses concerning several proportions, Procedure for Analysis of Variance (ANOVA) for comparing the means of k (>2) groups- one way classification (Completely randomized designs), Procedure

(Autonomous)

DEPARTMENT OF COMPUTER SCIENCE AND ENGINEERING

for Analysis of Variance (ANOVA) for comparing the means of k (>2) groups- two way classification (Randomized block designs).

(Sections 9.1, 9.2, 9.3, 10.1, 10.2, 10.3, 12.2, 12.3 of Text Book [1])

| UN11-4 | | 1. | 2 Hours |
|---------------------|-------------------------|---------|------------|
| concept of bivariat | e relationship, scatter | diagram | , Pearson" |

Multivariate Analysis: The c correlation and correlation matrix. Simple linear regression model and assumptions, Least Squares Estimation of the parameters of the model, Testing the significance of the model. Regression versus Correlation, Multiple linear regression model with k explanatory variables and assumptions of the model. . Test for significance of the regression model and individual regression coefficients. Applications of multiple regression analysis.

| Practicals | | | | | | | | | | | |
| Final Exam | : | 3 hours | Final Exam Marks | : | 70 | | | | | | |

Pre-Requisite: None.

Course Objectives: Students will be able to

- > Organize and manipulate files and directories
- Use the vi text editor to create and modify files
- > Use SED command for insertion, deletion, and search and replace (substitution).
- Understand pattern scanning and processing using AWK.
- Create structured shell programming which accept and use positional parameters and exported variables.
- Understand File management system calls to provide I/O support for storage device types and multiple users.

CO-1 Organize and manipulate files and directories, Use the vi text editor to create and modify files CO-2 Use SED command for insertion, deletion and search and replace (substitution) CO-3 Learn how to use AWK for pattern scanning and processing. Create structured shell programming which accepts and uses positional parameters and export variables. Understand file management system calls to provide I/O support for storage device types and multiple users.

UNIT-1 4 Hours

Directory commands – pwd, cd, mkdir, rmdir commands. The dot (.) and double dots (..) notations to represent present and parent directories and their usage in relative path names. File related commands –Editing with vi, cat, mv, rm, cp, wc. File attributes and permissions and knowing them. The ls command with options. Changing file permissions: (chmod) the relative and absolute permissions changing methods. Recursively changing file permissions. Directory Permissions. Other Basic commands: cal, date, df, du, find, jobs, kill, less and more, ps, set, wc, who.

LIST OF EXPERIMENTS

- 1. Obtain the following results (i) To print the name of operating system (ii) To print the login name (iii) To print the host name
- 2. Find out the users who are currently logged in and find the particular user too.
- 3. Display the calendar for (i) Jan 2000 (ii) Feb 1999 (iii) 9th month of the year 7

(Autonomous)

DEPARTMENT OF COMPUTER SCIENCE AND ENGINEERING

A.D (iv) For the current month (v) Current Date Day Abbreviation , Month

Abbreviation along with year

- 4. Display the time in 12-Hour and 24 Hour Notations.
- 5. Display the Current Date and Current Time.
- 6. Display the message "GOOD MORNING" in enlarged characters.
- 7. Display the name of your home directory.
- 8. Create a directory SAMPLE under your home directory.
- 9. Create a subdirectory by name TRIAL under SAMPLE.
- 10. Change to SAMPLE.
- 11. Change to your home directory.
- 12. Change from home directory to TRIAL by using absolute and relative pathname.
- 13. Remove directory TRIAL.
- 14. Create a directory TEST using absolute pathname.
- 15. Using a single command change from current directory to home directory.
- 16. Remove a directory using absolute pathname.
- 17. Create files my file and your file under Present Working Directory.
- 18. Display the files my file and your file.
- 19. Append more lines in the my file and your file files.
- 20. How will you create a hidden file?.
- 21. Copy myfile file to emp.
- 22. Write the command to create alias name for a file.
- 23. Move yourfile file to dept.
- 24. Copy emp file and dept file to TRIAL directory
- 25. Compare a file with itself.
- 26. Compare myfile file and emp file.

UNIT-2

4 Hours

The Stream editor(sed):Line addressing, multiple instructions, context addressing, writing selected lines to a file, text editing ,substitution, basic regular expressions.

File Handling and Text Processing utilities: grep, egrep, fgrep.

AWK: sample awk filtering, splitting a line into fields, formatting output, variables and expressions, comparison operators, number processing, storing awk programs in a file, the BEGIN and END sections, Built in variables and arrays, control structures.

LIST OF EXPERIMENTS

- 1. A. Create the following file as sed.lab: unix is great os. unix is open source. unix is free os. learn operating system. Unix linux which one you choose. (Each sentence in a line)
 - 1. Replace 'unix' with 'linux'.
 - 2. Replace only the third (3rd) instance of 'unix' with 'linux'.
 - 3. Try sed 's/unix/linux/g' sed.lab.
 - 4. Replace 'unix' with 'linux' but only on line 3.
 - 5. Add a new line, 'Actually Windows is best' after the second line.

В.

- 1. Viewing a range of lines of a document
- 2. Viewing the entire file except a given range
- 3. Viewing non-consecutive lines and ranges
- 4. Replacing words or characters inside a range
- 5. Using regular expressions
- 6. Viewing lines containing with a given pattern
- 7. Inserting spaces in files
- 8. Performing two or more substitutions at once

C.

(Autonomous)

DEPARTMENT OF COMPUTER SCIENCE AND ENGINEERING

- 1. Design a command "wishme" that will great you "good morning", "good Afternoon", according to current time.
- 2. Design a command "fags" thats will list the files and their ages, to date.
- 3. Design a command "word-freq" that will print the words and number of Occurrences of that word in the given text.

UNIT-3 4 Hours

Shell programming: shell, functions of shell, metacharacters, input redirections and output redirections, pipes, shell as a programming language, shell variables, predefined local variables, predefined environment variables, arithmetic and conditional expressions, control structures, positional parameters, passing command line arguments, built in shell commands, shell programs, functions and arrays.

LIST OF EXPERIMENTS

1.

- A. Design a command "which" that prints the path of the command given as Argument
- B. Design a command "filelist[-c <char>]" which prints all file names beginning with The charter specified as argument to the command, if the position is not specified It should print all the file names.
- C. Design a command **getline**[-f < filename> -n < line number>] which prints the line number lineno in the file specified with -f option. If the line number is not specified it should list all the lines in the given file
- D. Design a command **monthly-file[-m < month>]** which list the files created in a given month where month is argument to be command. If the options is not specified it list the files in all the months.

2.

- A. Design a command **list lines**[-f < file name> -v < varname>] which prints the line from the given file **file name**, which containing the variable varname.if arname Is not specified it should list, all the lines.
- B. Design a command avg[-n <colon> -f <file name>] which prints the average of the given column in a file where colon and file name are arguments to the commands

UNIT-4 4 Hours

File management System calls: Regular File management system calls: open(), read(), write(), lseek(), close(), unlink(), stat(), getdents().

LIST OF EXPERIMENTS

- 1. Write a C program to copy data from source file to destination file, where the file names are provided as command-line arguments.
- 2. Write a C program that reads every 100th byte from the file, where the file name is given as command-line argument.
- 3. Write a C program to display information of a given file which determines the type of file and inode information, where the file name is given as command-line arguments.

| Final Exam | : | 3 hours | Final Exam Marks | : | 70 | | | | | |
| | L . | | | - | | | | | | |

Pre-Requisite: None.

Course Objectives: Students will be able to

- Understand and program basic data structures like arrays and linked lists with their applications.
- Understand and Program data structures like stacks and queues with their applications.
 Understand and implement sorting algorithms.
- Understand and program on trees, binary trees, binary search trees, avl trees, expression trees and their traversal methods.
- Understand and program on priority queues, hashing and their mechanisms. Basic knowledge of graphs representations and traversing methods.

| Course Out | tcomes: Students will be able to |
|------------|--|
| CO-1 | Apply programming techniques using pointers,DMA and structures to implement SLL and DLL. |
| CO-2 | Design and implement ADTs of stack, queue and its applications. |
| CO-3 | Analyze and implement different sorting techniques. |
| CO-4 | Analyze and implement BST,AVL tree and priority queue. |

Mapping of Course Outcomes with Program Outcomes & Program Specific Outcomes

LIST OF EXPERIMENTS

- 1. Write a program to perform the following operations on Array List
 - a). Creation, b). Insertion, c). Deletion, d). Search, e). Display.
- 2. Write a program that reads two lists of elements, prints them, reverses them, prints the reverse list, sort the lists, print the sorted lists, merges the list, prints merge list using array list.
- 3. Write a program to perform the following operations on Single Linked List.
 - a). Creation, b). Insertion, c). Deletion, d). Search, e). Display.
- 4. Write a program to perform the following operations on Doubly Linked List.
 - a). Creation, b). Insertion, c). Deletion, d). Search, e). Display.
- 5. Write a program to perform addition and multiplication of two polynomials using single Linked List.
- 6. Write a program to convert the given infix expression into postfix expression using stack.
- 7. Write a program to evaluate the postfix expression using stack.
- 8. Write a program that performs Radix sort on a given set of elements using queue.

(Autonomous)

DEPARTMENT OF COMPUTER SCIENCE AND ENGINEERING

- 9. Write a program to read n numbers in an array. Redisplay the array list with elements being sorted in ascending order using the following techniques
 - a). Bubble Sort, b). Selection Sort, c). Insertion Sort, d). Shell Sort.
- 10. Write a program to perform Binary Search tree operations and traversals.
- 11. Write a program to implement AVL tree that interactively allows
 - a). Insertion, b). Deletion, c). Find min, d). Find max.
- 12. Write a program to read n numbers in an array. Redisplay the arraylist with elements being sorted in ascending order using Heap Sort.

LIST OF EXPERIMENTS

- 1. Write a Java program to declare, initialize and accessing the elements of Single dimensional Arrays, Multidimensional Arrays.
- 2. Write a Java program to demonstrate recursion.
- 3. Write a Java program to demonstrate static member, static method and static block.
- 4. Write a Java program to demonstrate method overloading and method overriding using simple inheritance.
- 5. Write a Java program to demonstrate multiple inheritance using interfaces.
- 6. Write a Java program to demonstrate packages.
- 7. Write a Java program to demonstrate String class methods.
- 8. Write a Java program to create user defined exception class, use couple of built-in Exception classes.
- 9. Write a Java program to demonstrate inter-thread communication.
- 10. Write an Applet program to demonstrate passing parameters to Applet, Graphics, Color and Font classes.
- 11. Write a Java program to demonstrate handling Action events, Item events, Key events, Mouse events, Mouse Motion events.

(Autonomous) DEPARTMENT OF COMPUTER SCIENCE AND ENGINEERING

UNIT-1 8 hours

Human Values: Morals, Values and Ethics, Integrity, Work Ethics, Service and Learning, Civic Virtue, Respect for Others, Living Peacefully, Caring and Sharing, Honesty, Courage, Value Time, Cooperation, Commitment and Empathy, Spirituality, Character.

Engineering Ethics: History of Ethics, Engineering Ethics, Consensus and Controversy, Profession and Professionalism, Professional Roles of Engineers, Self Interest, Customs and Religion, Uses of

(Autonomous)

DEPARTMENT OF COMPUTER SCIENCE AND ENGINEERING

Ethical Theories, Professional Ethics, Types of Inquiry, Kohlberg's Theory, Gilligan's Argument, Heinz's Dilemma.

Engineering as Social Experimentation: Comparison with Standard Experiments, Knowledge Gained, Conscientiousness, Relevant Information, Learning from the Past, Engineers as Managers, Consultants, and Leaders, Accountability, Roles of Codes, Codes and Experimental Nature of Engineering.

> **UNIT-2** 8 hours

Engineers' Responsibility for Safety and Risk: Safety and Risk, Types of Risks, Safety and the Engineer, Designing for Safety, Risk-Benefit Analysis, Accidents.

Responsibilities and Rights: Collegiality, Two Senses of Loyalty, Obligations of Loyalty, Misguided Loyalty, Professionalism and Loyalty, Professional Rights, Professional Responsibilities, Conflict of Interest, Self-interest, Customs and Religion, Collective Bargaining, Confidentiality, Acceptance of Bribes/Gifts, Occupational Crimes, Whistle Blowing.

> **UNIT-3** 8 hours

Global Issues: Globalization, Cross-cultural Issues, Environmental Ethics, Computer Ethics, Weapons Development, Ethics and Research, Analyzing Ethical Problems in Research, Intellectual Property Rights (IPRs).

Ethical Audit: Aspects of Project Realization, Ethical Audit Procedure, The Decision Makers

| Ethical Audit: As | pecis of Project Realization, Ethical Audit Procedure, The L | Jecision Makers, |
|-------------------------|--|------------------|
| Variety of Interests, | Formulation of the Brief, The Audit Statement, The Audit Rev | iews. |
| | UNIT-4 | 8 hours |
| Case Studies: Bhop | oal Gas Tragedy, The Chernobyl Disaster. | |
| Appendix 1: Institu | tion of Engineers (India): Sample Codes of Ethics. | |
| Appendix 2 : ACM | Code of Ethics and Professional Conduct. | |
| | | |

Databases and Database Users: Introduction - An Example, Characteristics of the Database Approach, Actorson the Scene, Workers behind the Scene, Advantages of Using the DBMS Approach.

Database System Concepts and Architecture : DataModels, Schemas and Instances ,Three-SchemaArchitecture and Data Independence, Database Languages and Interfaces, The Database System Environment, Centralized and Client/Server Architectures for DBMSs.

Data Modeling Using the Entity-Relationship (ER) Model: Using High-Level Conceptual Data Models for Database Design, An Example Database Application, Entity Types, Entity Sets, Attributes, and Keys - Relationship Types, Relationship Sets, Roles, and Structural Constraints, Weak Entity Types, Refining the ER Design for the COMPANY Database - ER Diagrams, Naming Conventions, and Design Issues

UNIT-2 12 hours

(Autonomous)

DEPARTMENT OF COMPUTER SCIENCE AND ENGINEERING

The Relational Algebra and Relational Calculus: Unary Relational Operations: SELECT and PROJECT, Relational Algebra Operations from Set Theory, Binary Relational Operations: JOIN and DIVISION, The Tuple Relational Calculus, The Domain Relational Calculus.

Schema Definition, Constraints, Queries, and Views: SQL Data Definition and Data Types, Specifying Constraints in SQL, Schema Change Statements in SQL, Basic Queries in SQL,INSERT, DELETE, and UPDATE Statements in SQL, Views (Virtual Tables) in SQL

UNIT-3 12 hours

Indexing Structures for Files: Types of Single-Level Ordered Indexes, Multilevel Indexes - Dynamic Multilevel Indexes Using B+-Trees.

Functional Dependencies and Normalization for Relational Databases: Informal Design Guidelines for Relation Schemas, Functional Dependencies, Normal Forms Based on Primary Keys - General Definitions of Second and Third Normal Forms, Boyce-Codd Normal Form.

Relational Database Design Algorithms and Further Dependencies:Properties of Relational Decompositions -Lossless Join Decomposition and Dependency Preserving Decomposition, Multivalued Dependencies and Fourth Normal Form, Join Dependencies and Fifth Normal Form.

UNIT-4 12 hours

Introduction to Transaction Processing Concepts and Theory: Introduction to Transaction Processing, Transaction and System Concepts, Desirable Properties of Transactions, Characterizing Schedules Based on Recoverability, Characterizing Schedules Based on Serializability

Concurrency Control Techniques: Two-Phase Locking Techniques for Concurrency Control, Concurrency Control Based on Timestamp Ordering, Validation (Optimistic) Concurrency Control Techniques, Multiple Granularity.

Database Recovery Techniques :Recovery Techniques Based on Deferred Update, Recovery Techniques Based on Immediate Update, Shadow Paging.

DEPARTMENT OF COMPUTER SCIENCE AND ENGINEERING

| PYTHON PROGRAMMING | | | | | | | | | | |
|--|---|----------------------|-----------------------|---|----|--|--|--|--|--|
| II B.Tech – III Semester (Code: 20CSL401/SO02) | | | | | | | | | | |
| Practicals | : | 5 Hours/Week (2T+3P) | Continuous Assessment | : | 30 | | | | | |
| Final Exam | : | 3 hours | Final Exam Marks | : | 70 | | | | | |
| | | | | | | | | | | |

Pre-Requisite: None.

Course Objectives: Students will be able to

- Understand and write code using the basics of Python, Statements, Expressions, Conditional Executions, and Functions.
- Write code for Iteration, Strings, File I/O.
- Write code in creating, usage of Lists, Dictionaries, and Tuples.
- Understand the concepts of Object Orientation, Databases and write code implementing

| Course Ou | Course Outcomes: Students will be able to | | | | | | | | |
|-----------|--|--|--|--|--|--|--|--|--|
| CO-1 | Identify the basic python constructs with a view of using them in problem solving. | | | | | | | | |
| CO-2 | Explore the usability of functions and strings in modular programming | | | | | | | | |
| CO-3 | Apply lists, dictionaries, tuples and file operations to organize the data in real world problems. | | | | | | | | |
| CO-4 | Implement the problems in terms of real world objects using object oriented and database concepts. | | | | | | | | |

UNIT-1 32 Hours

Introduction: Overview, History of Python, Python Features, Environment Setup. Variables, expressions, and statements: values and types, variables, names and keywords, statements, operators and operands, expressions, order of operations, modulus operator, string operations, asking the user for input, comments, choosing mnemonic variable names.

Conditional execution: Boolean expressions, logical operators, conditional execution,

Alternative execution, chained conditionals, nested conditionals, catching exceptions using try and except, short-circuit evaluation of logical expressions.

Functions: function calls, built-in functions, type conversion functions, random numbers, math functions, adding new functions, definitions and uses, flow of execution, parameters and arguments, fruitful functions and void functions.

Iteration: updating variables, the while statement, infinite loops and break, finishing iterations with continue, definite loops using for, loop patterns.

Strings: string is a sequence, getting the length of a string using len, traversal through a string with a loop, string slices, strings are immutable, looping and counting, the in operator, string comparison, string methods, parsing strings, format operator.

Files I/O:persistence, opening files, text files and lines, reading files, searching through a file, letting the user choose the file name, using try except and open, writing files.

Section 1

BAPATLA ENGINEERING COLLEGE:: BAPATLA

(Autonomous)

DEPARTMENT OF COMPUTER SCIENCE AND ENGINEERING

Lists: a list is a sequence, lists are mutable, traversing, operations, slices, methods, deleting elements, functions, strings, parsing lines, objects and values, aliasing, arguments.

Dictionaries: dictionary as a set of counters, dictionaries and files, looping and dictionaries, advanced text parsing.

Tuples: tuples are immutable, comparing tuples, tuple assignment, dictionaries and tuples, multiple assignment with dictionaries, the most common words, using tuples as keys in dictionaries, sequences.

Object-Oriented Programming: Managing Larger Programs, Using Objects, starting with Programs, Subdividing a Problem–Encapsulation, First Python Object, Classes as Types, Object Lifecycle, Many Instances, Inheritance.

Using Databases and SQL: Database concepts, Database Browser for SQLite, creating a database table, Structured Query Language summary, Basic data modeling, Programming with multiple tables, three kinds of keys, Using JOIN to retrieve data.

LIST OF EXPERIMENTS

- 1. Write a python program to check if the number is positive or negative or zero and display an appropriate message.
- 2. Write a python program to take a string from user and count number of vowels present and percentage of vowels in it.
- 3. Write a python program to find the most frequent words in a text file.
- 4. Write a Python Program to Find the Sum of first n Natural Numbers.
- 5. Write a python program to find the numbers which are divisible by 7 and multiple of 5 between 1500 and 2700.
- 6. Write a Python Program to solve Quadratic Equation.
- 7. Create a program that ask the user for a number and then prints out a list of all the divisors of that number.
- 8. Write a Python Program to Find HCF or GCD.
- 9. Write a Python Program to Find LCM.
- 10. Write a Python program to construct the following pattern, using a nested loop number.

22 333 4444

55555

666666

- 11. Write a Python Program to sort the given words in Alphabetic Order.
- 12. Write a Python function to create the HTML string with tags around the word(s).
- 13. Write a Python program to reverse words in a string.
- 14. Write a Python program to strip a set of characters from a string.
- 15. Write a python function to find the maximum and minimum of a list of numbers.
- 16. Write a Python Program to Find the Square Root.
- 17. Write a Python Program to Convert Decimal to Binary Using Recursion.
- 18. Write a python recursive function to a find the factorial of a given number.
- 19. Write a python program to find the longest word in each line of given file.
- 20. Write a Python program to combine each line from first file with the corresponding line in second file.
- 21. Write a Python program to read a random line from a file.
- 23. Write a Python program to split a list every Nth element.

Sample list: ['a', 'b', 'c', 'd', 'e', 'f', 'g', 'h', 'i', 'j', 'k', 'l', 'm', 'n']

Expected Output: [['a', 'd', 'g', 'j', 'm'], ['b', 'e', 'h', 'k', 'n'], ['c', 'f', 'i', 'l']]

24. Write a Python program to compute the similarity between two lists.

(Autonomous)

DEPARTMENT OF COMPUTER SCIENCE AND ENGINEERING

```
["red", "orange", "green",
                                                          "blue", "white"], ["black",
           Sample data:
           "green", "blue"]
          Expected Output:
          Color1-Color2: ['white', 'orange', 'red'] Color2-Color1: ['black', 'yellow']
25. Write a Python program to replace the last element in a list with another list.
          Sample data: [1, 3, 5, 7, 9, 10], [2, 4, 6,8] Expected Output: [1, 3, 5, 7, 9, 2, 4, 6, 8]
26. Write a Python program to find the repeated items of a tuple.
27. Write a Python program to convert a list with duplicates to a tuple without duplicates.
28. Write a Python program to reverse the elements of a tuple.
29. Write a Python program to replace last value of tuples in a list.
           Sample list: [(10, 20, 40), (40, 50, 60), (70, 80, 90)]
           Expected Output: [(10, 20, 100), (40, 50, 100), (70, 80, 100)]
31. Write a Python program to combine two dictionaries by adding values for common keys.
          d1 = \{'a': 100, 'b': 200, 'c': 300\}
          d2 = \{'a': 300, 'b': 200, 'd': 400\}
          Sample output: Counter({'a': 400, 'b': 400, 'd': 400, 'c': 300})
33. Write a Python program to create and display all combinations of letters, selecting each letter
from a different key in a dictionary.
          Sample data: {'1':['a','b'], '2':['c','d']} Expected Output:
          ac ad bc bd
34. Write a Python program to get the top three items in a shop.
           Sample data: {'item1': 45.50, 'item2':35, 'item3': 41.30, 'item4':55, 'item5': 24} Expected
          Output:
           item4 55 item1 45.5
          item3 41.3
35. Write a Python program to match both key values in two dictionaries.
           Sample dictionary: {'key1': 1, 'key2': 3, 'key3': 2}, {'key1': 1, 'key2': 2}
          Expected output: key1: 1 is present in both x and y
36. Write a Python class named Rectangle constructed by a length and width and a method which
will compute the area of a rectangle.
37. Write a Python class named Circle constructed by a radius and two methods which will compute
the area and the perimeter of a circle.
38. Write a Python program to create a Single Linked List using classes.
39. Write a Python program to create a FIFO queue using classes.
40. Predict the output of following Python programs and write the justification. class X(object):
            def init (self.a):
               self.num = a
            def doubleup(self):
               self.num *= 2
          class Y(X):
             def init (self,a): X. init (self, a)
            def tripleup(self):
               self.num *= 3
          obj = Y(4)
          print(obj.num)
          obj.doubleup()
```

print(obj.num)

(Autonomous)

DEPARTMENT OF COMPUTER SCIENCE AND ENGINEERING

```
obj.tripleup()
          print(obj.num)
41. Predict the output of following Python programs and write the justification.
          # Base or Super class class Person(object):
            def init (self, name):
              self.name = name
            def getName(self):
              return self.name
            def isEmployee(self):
              return False
          # Inherited or Subclass (Note Person in bracket)
          class Employee(Person):
           def init (self, name, eid):
           "In Python 3.0+, "super().__init__(name)" also works"
              super(Employee, self).__init__(name)
              self.empID = eid
            def isEmployee(self):
              return True
            def getID(self):
              return self.empID
          # Driver code
          emp = Employee("Geek1", "E101")
          print(emp.getName(), emp.isEmployee(), emp.getID())
42. Create a employees database with the following attributes and insert rows. employee id,
first name, last name, email, phone number, hire date, job id, salary, commission pct,
manager id, department id
43. Write a query to get the highest, lowest, sum, and average salary of all employees.
44. Write a query to get the average salary for all departments employing more than 10 employees.
45. Write a query to find the names (first name, last name), the salary of the employees
whose salary is greater than the average salary.
46. Write a query to get nth max salaries of employees.

| Practicals | : | 3 Hours/Week | Continuous Assessment | : | 30 | | | | | |
| Final Exam | : | 3 hours | Final Exam Marks | : | 70 | | | | | |

Pre-Requisite: None.

Course Objectives: Students will be able to

- Analyze the student on database languages.
- Interpret the Knowledge on database design.
- Determine the knowledge on key constraints and Normalization.
- Determine the knowledge on procedures and functions.

Course Outcomes: Students will be able to:

| CO-1 | Design database by using ER Diagrams |
|------|--|
| CO-2 | Implement DDL, DML, DCL Commands using SQL. |
| CO-3 | Apply key constrains to get a normalized database. |
| CO-4 | Implement procedures and functions using PL/SQL |

LIST OF EXPERIMENTS

Experiment 1: Working with ER Diagram

Example: ER Diagram for Sailors Database

Entities:

- 1. Sailor
- 2. Boat Relationship:

Reserves

Primary Key Atributes:

- 1. SID (Sailor Entity)
- 2. BID (Boat Entity)

Experiment 2: Working with DDL, DML, DCL and Key Constraints

Creation, Altering and Dropping of Tables and Inserting Rows into a Table (Use Constraints While Creating Tables) Examples Using Select Command.

Experiment 3: Working with Queries and Nested QUERIES

(Autonomous)

DEPARTMENT OF COMPUTER SCIENCE AND ENGINEERING

Queries (along with sub Queries) using ANY, ALL, IN, EXISTS, NOTEXISTS, UNION, INTERSET, Constraints

Expriment 4: Working with Queries USING Aggregate Operators & views

Queries using Aggregate Functions (COUNT, SUM, AVG, MAX and MIN), GROUP BY, HAVING and Creation and Dropping of Views

Experiment 5: Working with Conversion Functions & String Functions

Queries using Conversion Functions (TO_CHAR, TO_NUMBER AND TO_DATE), String Functions (CONCATENATION, LPAD, RPAD, LTRIM, RTRIM, LOWER, UPPER, INITCAP, LENGTH, SUBSTR AND INSTR), Date Functions (SYSDATE, NEXT_DAY, ADD_MONTHS, LAST_DAY, MONTHS_BETWEEN), LEAST, GREATEST, TRUNC, ROUND, TO_CHAR, TO DATE

Experiment 6: Working with LOOPS using PL/SQL

Program Development using WHILE LOOPS, FOR LOOPS, Nested Loops using ERROR Handling.

Experiment 7: Working with Functions Using PL/SQL

Program Development using Creation of Stored Functions, Invoke Functions in SQL Statements and Write Complex Functions.

Experiment 8: Working with Stored Procedures

Programs Development using Creation of Procedures, Passing Parameters IN and OUT of

PROCEDURES

Experiment 9: Working with CURSORS

Develop Programs using Features Parameters in a CURSOR, FOR UPDATE CURSOR, WHERE CURRENT of Clause and CURSOR Variables.

Experiment 10: Working with Triggers using PL/SQL

Develop Programs using BEFORE and AFTER Triggers, Row and Statement Triggers and INSTEAD OF Triggers

UNIT-I 15 Periods

Automata: Why Study Automata Theory, The central concepts of automata theory - Alphabets, Strings, Languages, Problems.

Finite Automata: An Informal picture of finite automata, Deterministic finite automata (DFA) - Definition of DFA, DFA processing strings, Notations for DFA, Extended transition function, the language of DFA, Non deterministic finite automata (NFA) – Definition of NFA, Extended transition function, the language of NFA, Equivalence of DFA and NFA.

Automata with ϵ transitions: Use of ϵ - transition, notation for an ϵ - NFA, Epsilon closures, extended transitions and languages, Eliminating ϵ - transitions.

(Autonomous)

DEPARTMENT OF COMPUTER SCIENCE AND ENGINEERING

UNIT-2 15 Periods

Regular Expressions and Languages: Regular expressions, finite automata and regular expressions, Algebraic laws of regular expressions.

Properties of Regular Languages: Proving languages are not regular – Pumping lemma for regular languages, Applications of the pumping lemma, Closure Properties of Regular Languages, Equivalence and minimization of automata – Minimization of DFA.

UNIT-3

15 Periods

(Construction based treatment & proofs are excluded)

Context Free Grammars: Context Free Grammars, Parse Trees, ambiguous grammars. **Pushdown Automata:** Definition of the Pushdown automata, the languages of PDA, Equivalences of PDA's and CFG's.

Context free languages: Normal form's for context- Free grammars, the pumping lemma for context free languages.

UNIT-4

15 Periods

Properties of Context free languages: closure properties for context free languages, Decision properties for CFL's.

Introduction to Turing Machines: The Turing Machine, programming techniques for Turing machines.

Undecidability: a language that is not recursively enumerable, an undecidable problem that is RE, Undecidability problems about TM, Post's Correspondence problem.

| | | | | | | | | | | | | | | |

Pre-Requisite: Operating Systems (20CS304)

Course Objectives: Students will be able to

- Understand the basic concepts of data communication, layered model, protocols and OSI&TCP layers
- Understand the basic concepts of Data Link control, Network Layer Design Issues, Routing Algorithms & Congestion.
- Understand the basic concepts of Quality of service, Network Layer & Transport Layer
- > Understand the basic concepts of TCP, UDP & Application Layer

CO-1 Understand the fundamentals of networks,network reference models and various error coeerection and detection techniques in data communication. CO-2 Analyze error control,flow control mechanisms used at data link layer and various routing and congestion control protocols in network design. Understand the basic principles of OPV4 and its addressing mechanisms,elements of transport protocols in transport layer. CO-4 Analyze the underlying protocols in transport layer and application layer.

Mapping of Course Outcomes with Program Outcomes & Program Specific Outcomes

UNIT-1 14 Hours

Data Communications & Networking Overview: A Communications Model, Data Communications, Data Communication Networking.

Protocol Architecture: The Need for a Protocol Architecture, A Simple Protocol Architecture, OSI, The TCP/IP Protocol Architecture.

Digital Data Communication Techniques: Asynchronous & Synchronous Transmission, Types of Errors, Error Detection, Error Correction.

UNIT-2 16 Hours

DATA Link Control: Flow Control, Error Control.

Network Layer: Network Layer Design Issues: Store-and-Forward Packet Switching, Services Provided to the Transport Layer, Implementation of Connectionless Service, Implementation of Connection-Oriented Service, Comparison of Virtual-Circuit & Datagram Subnets.

(Autonomous)

DEPARTMENT OF COMPUTER SCIENCE AND ENGINEERING

Routing Algorithms: The Optimality Principle, Shortest Path Routing, Flooding, Distance Vector Routing, Link State Routing, Hierarchical Routing.

Congestion Control Algorithms: General Principles of Congestion Control, Congestion Prevention Policies, Congestion Control in Virtual-Circuit Subnets, Congestion Control in Datagram Subnets, Load Shedding, Jitter Control.

UNIT-3 16 Hours

Quality of Service: Requirements, Techniques for Achieving Good Quality of Service The Network Layer in the Internet: The IP Protocol, IP Addresses, Internet Control Protocols. The **Transport Layer, The Transport Service:** Services Provided to the Upper Layers, Transport Service Primitives, Berkeley sockets

Elements of Transport Protocols: Addressing, Connection Establishment, Connection Release, Flow Control and Buffering, Multiplexing, Crash Recovery.

UNIT-4 14 Hours

The Internet Transport Protocol (UDP): Introduction to UDP, Remote Procedure Call, The Real-Time Transport Protocol.

The Internet Transport Protocols (TCP): Introduction to TCP, The TCP Service Model, The TCP Protocol, The TCP Segment Header, TCP Connection Establishment, TCP Connection Release, Modeling TCP Connection Management, TCP Transmission Policy, TCP Congestion Control, TCP Timer Management.

Application Layer: The Domain Name System (DNS): The DNS Name Space, Resource Records, Name Servers.

INTRODUCTION TO SOFTWARE ENGINEERING: The Evolving Role of Software, Software, the Changing Nature of Software, Legacy Software, Software Myths.

A GENERIC VIEW OF PROCESS: Software Engineering - A Layered Technology, a Process Framework, the CMMI, Process Patterns, Process Assessment, Personal and Team Process Models, Product and Process.

PROCESS MODELS: Prescriptive Models, the Waterfall Model, Incremental Process Models, Evolutionary Models, the Unified Process.

UNIT-2 15 Periods

AN AGILE VIEW OF PROCESS: What Is Agility? , What Is an Agile Process? , Agile Process Models.

REQUIREMENTS ENGINEERING: A Bridge To Design and Construction, Requirements Engineering Tasks, Initiating the Requirements Engineering Process, Eliciting Requirements, Developing Use-cases, Building the Analysis Model, Negotiating Requirements, Validating Requirements.

(Autonomous)

DEPARTMENT OF COMPUTER SCIENCE AND ENGINEERING

BUILDING THE ANALYSIS MODEL: Requirements Analysis, Analysis Modeling Approaches, Data Modeling Concepts, Flow-Oriented Modeling, Class Based Modeling Creating a Behavioral Model.

UNIT-3 15 Periods

DESIGN ENGINEERING: Design within the Context of Software Engineering, Design Process and Design Quality, Design Concepts The Design Model, Pattern Based Software Design.

CREATING AN ARCHITECTURAL DESIGN: Software Architecture, Data Design, Architectural Styles and Patterns, Architectural Design, Assessing Alternative Architectural Designs.

MODELING COMPONENT-LEVEL DESIGN: What Is a Component? , Designing Class-Based Components, Conducting Component-Level Design, Designing Conventional Components.

PERFORMING USER INTERFACE DESIGN: The Golden Rules, User Interface Analysis and Design, Interface Analysis, Interface Design Steps, Design Evaluation.

UNIT-4 15 Periods

SOFTWARE PROCESS AND PROJECT METRICS: Introduction: Metrics Process and Project Domains, Software Measurement, Metrics for Software Quality, Integrating Metrics with Process.

SOFTWARE QUALITY ASSURANCE: Quality Concepts, Quality Movement, SQA, Software Reviews, Formal Technical Reviews, Formal Approaches to SQA, Software Reliability, ISO 9000 Quality Standards, SQA Plan.

SOFTWARE TESTING STRATEGIES: Strategic Approach, Strategic Issues, Test strategies for Conventional Software, White box testing, Black Box testing, Test strategies for Object Oriented Software, Validation Testing, System Testing, The Art of Debugging.

Pre-Requisite: None

Course Objectives: Students will be able to

- To make the engineering students aware of the importance, the role and the content of soft skills through instruction, knowledge acquisition, demonstration and practice.
- To know the importance of interpersonal and intrapersonal skills in an employability setting.
- Actively participate in group discussions / interviews and prepare & deliver Presentations.
- Function effectively in multi-disciplinary and heterogeneous teams through the knowledge of team work, Inter-personal relationships, stress management and leadership quality.

Course Outcomes: Students will be able to

CO-1 Use appropriate body language in social and professional contexts.

CO-2 Demonstrate different strategies in presenting themselves in professional contexts.

CO-3 Analyze and develop their own strategies of facing the interviews successfully.

CO-4 Develop team coordinating skills as well leadership qualities.

LIST OF EXPERIMENTS

Tool Required: StarUML

LIST OF EXPERIMENTS

- 16. Write down the problem statement for a suggested system of relevance.
- 17. Do requirement analysis and develop Software Requirement Specification Sheet(SRS) for suggested system.
- 18. To perform the function oriented diagram: Data Flow Diagram (DFD) and Structured chart.
- 19. To perform the user's view analysis for the suggested system: Use case diagram.
- 20. To draw the structural view diagram for the system: Class diagram, object diagram.
- 21. To draw the behavioral view diagram: State-chart diagram, Activity diagram
- 22. To perform the behavioral view diagram for the suggested system : Sequence diagram, Collaboration diagram
- 23. To perform the implementation view diagram: Component diagram for the system.
- 24. To perform the environmental view diagram: Deployment diagram for the system.
- 25. To perform various testing using the testing tool unit testing, integration testing

(Autonomous)

DEPARTMENT OF COMPUTER SCIENCE AND ENGINEERING

for a samplecode of the suggested system.

Note: Minimum 8 experiments should be carried.

List of Practical's

Choose any one project and do the above exercises for that project

- 1. Student Result Management System
- 2. Library management system
- 3. Inventory control system
- 4. Accounting system
- **5.** Fast food billing system
- **6.** Bank loan system
- 7. Blood bank system
- 8. Railway reservation system
- 9. Automatic teller machine
- 10. Video library management system
- 11. Hotel management system
- **12.** Hostel management system
- 13. E-ticking
- **14.** Share online trading
- **15.** Hostel management system
- **16.** Resource management system
- 17. Court case management system

UNIT-1 8 Hours

Historical Background: TKS during the Pre-colonial and Colonial Period

Indian Traditional Knowledge System

Traditional Medicine: Ayurveda, Simple Definition, Origin, The Great Three Classics of Ayurveda, The Branches of Ayurveda, Basic Concepts of Ayurveda, Purusha/Prakruti, Manifestation of Creation, Mental Constitution, Vata, Pitta and Kapha: The Three Doshas

UNIT-2

Traditional Production and Construction Technology: Social Conditions and Technological Progress, The Impetus for Metallurgy, Social Needs and Technological Applications, State Support of Technology, India and the Industrial Revolution.

History of Physics and Chemistry: Philosophy and Physical Science, Optics and Sound, The Laws of Motion, The Five Basic Physical Elements, Indian Ideas about Atomic Physics.

Traditional Art and Architecture and Vastu Shashtra: The Principles of Vastu are simple

8 Hours **UNIT-3**

Origin of Mathematics: The Decimal System in Harappa, Panini and Formal Scientific Notation, The Indian Numeral System, Emergence of Calculus, The Spread of Indian Mathematics, The

(Autonomous)

DEPARTMENT OF COMPUTER SCIENCE AND ENGINEERING

Concept of Zero.

Astronomy and Astrology

TKS and the Indian Union: Protection and the Legislative Frameworks in India, Comment, Sui Generis System, Trade Secrets and Know-how, Geographical Indications Bill, Protection of Plan varieties and Farmers Rights Bill, Rights of Communities, Monitoring Information on Patent Applications World-wide.

UNIT-4 8 Hours

Common Yoga Protocol: Introduction, What is Yoga? Brief History and Development of Yoga, The fundamentals of Yoga,

General Guidelines for Yoga Practice: Before the practice, During the Practice, After the Practice, Food for Thought, How Yoga can Help.

Invocation, 2. Sadilaja/Cālana Kriyās /Loosening Practices,

Yogāsanas:

Standing Postures: Tāḍāsana (Palm Tree Posture), Vṛkṣāsana (The Tree Posture), Pāda-Hastāsana (The Hands to Feet Posture), Ardha Cakrāsana (The Half Wheel Posture), Trikonāsana (The Triangle Posture)

Sitting Postures: Bhadrāsana (The Firm/Auspicious Posture), Vajrāsana (Thunderbolt Posture), Usṭrāsana (Camel Posture), Śaśakāsana (The Hare Posture), Vakrāsana (The Spinal Twist Posture),

Kapālabhāti 5. Prānāyāma: naḍīśodhana or anuloma viloma prānāyāma (Alternate Nostril Breathing), Śītalī Prāṇāyāma, Bhrāmarī Prāṇāyāma (Bhrāmarī Recaka) 6. Dhyāna 7. Sankalpa 8. Śantih pātha

| Lectures | : | 4 Hours/Week | Continuous Assessment | : | 30 | | | | | |
| Final Exam | : | 3 hours | Final Exam Marks | : | 70 | | | | | |

Pre-Requisite: Automata Theory & Formal Languages (20CS501)

Course Objectives: Students will be able to

- To comprehend the principles involved in the design and construction of compilers, the algorithms involved in the design and construction of compilers, Understand the design
- of lexical analyzer.
- To practice Various Bottom up parsing techniques.
- To apply Various Intermediate languages. To understand Code generation algorithm
- Various storage allocation strategies, Various Symbol table data structures.

Course Outcomes: Students will be able to

- To comprehend the principles involved in the design and construction of compilers, the algorithms involved in the design and construction of compilers, Understand the design of lexical analyzer.
- CO-2 To practice Various Bottom up parsing techniques.
- CO-3 To apply Various Intermediate languages. To understand Code generation algorithm
- CO-4 Various storage allocation strategies, Various Symbol table data structures.

UNIT-1 15 Hours

Introduction: Language Processors, The Structure of a Compiler.

Lexical Analysis: The Role of the Lexical Analyzer, Input Buffering, Specification of Tokens, Recognition of Tokens, The Lexical-Analyzer Generator Lex.

Syntax Analysis: Introduction, Writing a Grammar: elimination of left recursion, left factoring, Top-Down Parsing: Recursive-Descent Parsing, FIRST and FOLLOW, LL(1) Grammars, Nonrecursive Predictive Parsing.

UNIT-2 15 Hours

Bottom-Up Parsing, Introduction to LR Parsing: Simple LR, More Powerful LR Parsers: Canonical LR(1) Items, Constructing LR(1) Sets of Items, Canonical LR(1) Parsing Tables, Constructing LALR Parsing table. The Parser Generator YACC.

Syntax-Directed Translation: Syntax-Directed Definitions, Evaluation Orders for SDD's, Construction of syntax trees.

UNIT-3 15 Hours

Intermediate-Code Generation: Variants of Syntax Trees, Three-Address codes, Translation of expressions: Operations within expressions, Incremental translation, control flow: Boolean

(Autonomous)

DEPARTMENT OF COMPUTER SCIENCE AND ENGINEERING

expressions: Short circuited code Flow of control statements, Control flow translation of Boolean expressions, Backpatching for Boolean Expressions.

Code Generation: Issues in the Design of a Code Generator, Basic Blocks and Flow Graph

| | | | | | | | | | | | |

Pre-Requisite: Basic Calculus and Probability

Course Objectives: Students will be able to

- Learn a Regression Model.
- Comprehend a Supervised Learning Model.
- Apply Ensemble methods for improving the performance of a Learning Model.
- Apply an Unsupervised Learning Model.

Course Outcomes: Students will be able to

| CO-1 | Understand a very broad collection of machine learning algorithms, problems and apply |
|------|---|
| | the correct regression model for the given problem and implement it. |
| CO-2 | Analyze the supervised discriminative and generate models for the given problem and |
| | implement it. |
| CO-3 | Identify the supervised strong learning model for the given problem and implement it. |
| CO-4 | Learn the basics of the learning problem with hypothesis, version spaces and choose the |
| CO-4 | correct clustering algorithm for the given problem and implement it. |
| | |

UNIT-1 15 Hours

Machine learning basics: What is machine learning? Key terminology, Types of Machine Learning Systems, how to choose the right algorithm, Steps in developing a machine learning application, Main Challenges of Machine Learning Essential Python Libraries: Scikit-learn, NumPy, matplotlib, Pandas. A First Application: Classifying iris species using Sci-kit learn.

Linear Regression: Simple linear regression. Optimization of model parameters using Batch gradient decent algorithm, Mini batch gradient decent algorithm and Stochastic gradient descent algorithm, Multiple linear regression, locally weighted linear regression, Polynomial Regression. Regularized Linear Models- Ridge Regression and Lasso Regression

Regularization: Bios Variance tradeoff, L1 and L2 regularization.

UNIT-2 8 Hours

Generative Classifiers: Classifying with Bayesian decision theory, Bayes' rule, Naïve Bayes classifier.

Discriminative Classifiers: Logistic Regression, Decision Trees: Training and Visualizing a Decision Tree, Making Predictions, Estimating Class Probabilities, The CART Training Algorithm,

(Autonomous)

DEPARTMENT OF COMPUTER SCIENCE AND ENGINEERING

Attribute selection measures- Gini impurity; Entropy, Regularization Hyperparameters, Regression Trees, Linear Support vector machines.

UNIT-3 8 Hours Evaluation of a Classifier: Measuring Accuracy Using Cross-Validation, Confusion Matrix, Precision and Recall, Precision/Recall Trade-off, The ROC Curve. Ensemble Learning: Voting Classifiers, Bagging and Pasting, Random Forests, Boosting-AdaBoost and Gradient Boosting. UNIT-4 8 Hours Computational Learning Theory: Introduction, probably learning an approximately correct hypothesis, sample complexity for finite hypothesis spaces. **Instance-based Learning:** Introduction, K-nearest neighbors. Unsupervised Learning: K-means clustering algorithm, Hierarchical clustering algorithm, Gaussian mixture model. Text Books: 1. - Learn a Regression Model
- Comprehend a Supervised Learning Model
- Apply Ensemble methods for improving the performance of a Learning Model
- Apply an Unsupervised Learning Model

CO-1 Apply the correct regressions models for the given problems and implement it. CO-2 Analyze the suitable supervised learning model for the given problem and implement it. CO-3 Identify the suitable probabilistic learning model for the given problem and implement it. CO-4 Choose the correct clustering algorithm for the given problem and implement it.

Mapping of Course Outcomes with Program Outcomes & Program Specific Outcomes

LIST OF EXPERIMENTS

- 1. Write sample programs using
 - a) NumPy b) Pandas
- 2. Write sample programs using
 - a) Matplotlib b) Scikit Learn
- 3. Write a program to implement the linear regression using
 - a) Stochastic gradient descent approach of training for a sample training data set.
 - b) Batch gradient descent approach of training for a sample training data set
- 4. Write a program to implement the naïve Bayesian classifier for a sample training data set. Compute the performance of the classifier.
- 5. Write a program to implement the Logistic regression for a sample training data set and test the same using appropriate data sets.
- 6. Write a program to demonstrate the working of the decision tree based on ID3 algorithm. Use an appropriate data set for building the decision tree and apply this knowledge to classify a new sample. Compute the performance of the classifier, considering few test data sets.

(Autonomous)

DEPARTMENT OF COMPUTER SCIENCE AND ENGINEERING

- 7. Write a program to implement the Random Forest classifier for a sample training data set stored as a .CSV file. Compare the performance of the classifier with any weak classifier, considering few test data sets.
- 8. Write a program to implement the AdaBoost classifier for a sample training data set. Compare the performance of the classifier with Random Forest classifier, considering few test data sets.
- 9. Apply k-Means algorithm to cluster a dataset.
- 10. Apply Hierarchical clustering algorithm to cluster a dataset.

Organization: Definition, Line, line and staff, functional and matrix organization, Introduction to

13 Hours

UNIT-2

Strategic Management: Definition and scope

(Autonomous)

DEPARTMENT OF COMPUTER SCIENCE AND ENGINEERING

Human Resource Management: Functions of HR management, human resource planning, recruitment, selection, placement, training & development and performance appraisal, Motivation theories, leadership styles.

Marketing Management: Concepts of Selling and Marketing, Functions of Marketing, Marketing mix (4 Ps); Advertising and sales promotion; Product life cycle; distribution channels

UNIT-3 13 Hours

Materials Management: Inventory Control, objectives of inventory control, Inventory costs, Basic EOQ model, Model with Price breaks, ABC analysis, FSN Analysis, VED Analysis.

Total Quality Management: Definition of, Importance of quality, Phases of quality management, quality control, Difference between Inspection and Quality control, Components of total quality, Quality Function Deployment

Introduction to Supply Chain Management: Definition, scope of SCM, Drivers of SCM, Advantages, limitations

UNIT-4 13 Hours

Financial Management: Functions of finance, Types of Capital-Fixed and Working Capital, Break Even Analysis.

Entrepreneurship Development: Introduction, Entrepreneurial characteristics, Functions of an Entrepreneur; Factors affecting entrepreneurship; Role of communication in entrepreneurship; Entrepreneurial Development-Objectives, Need of Training for enterprises; Finance for the enterprises.

| | | Professional Elective (| Code: PE06) | | |
| Lectures | : | 4 Hours/Week | Continuous Assessment | : | 30 |
| Final Exam | : | 3 hours | Final Exam Marks | : | 70 |

Pre-Requisite: Cryptography and Network Security (20CS603)

Course Objectives: Students will be able to

- To Comprehend and apply electronic money and payment systems.
- To Plan the architecture for the electronic payments and provide security for the payments.
- To Recognize the concept of security socket layer and the protocols.
- To Comprehend and plan micro payments and support face to face commerce.

Course Outcomes: Students will be able to

- CO-1 Analyze the impact of E-commerce on business models and strategies. TO develop E-markrting strategies and digital payment.

 To comprehend E-marketing tools and E-Business enterpreneurship. To infer insights on business incubators.
 - CO-3 Analyze SSL,TSL and established protocols.
 - CO-4 Develop the frame work and anotomy of money and payment systems.

| CO-4 | 1 | 2 | 2 | 2 | 3 | - | - | 1 | - | 1 | - | 3 | 3 | 3 | 3 |

UNIT-1 16 Hours

Overview of Electronic Commerce: What Is Electronic Commerce, Categories of Electronic Commerce, The Influence of the Internet, Infrastructure for Electronic Commerce, Network Access, Consequences of E-Commerce, Summary.

Money and Payment Systems:- The Mechanisms of Classical Money, Instruments of Payment, Types of Dematerialized Monies, Purses and Holders, Transactional Properties of Dematerialized Currencies, Overall Comparison of the Means of Payment, The Practice of Dematerialized Money, Banking Clearance and Settlement, Summary.

UNIT-2 16 Hours

Algorithms and Architectures for Security:- Security of Commercial Transactions, Security of Open Financial Networks, Security Objectives, OSI Model for Cryptographic Security, Security Services at the Link Layer, Security Services at the Network Layer, Security Services at the Application Layer, Message Confidentiality, Data Integrity, Identification of the Participants, Authentication of the Participants, Access Control, Denial of Service, Nonrepudiation, Secure Management of Cryptographic Keys, Exchange of Secret Keys: Kerberos, Public Key Kerberos, Exchange of Public Keys, ISAKMP (Internet Security Association and Key Management

(Autonomous)

DEPARTMENT OF COMPUTER SCIENCE AND ENGINEERING

Protocol), SKIP (Simple Key Management for Internet Protocols), Key Exchange Algorithm, Certificate Management, Encryption Cracks, Summary.

Business-to-Business Commerce: Overview of Business-to-Business Commerce, Examples of Business-to-Business Electronic Commerce, Business-to-Business Electronic Commerce Platforms, Obstacles Facing Business-to-Business Electronic Commerce, Business-to-Business Electronic Commerce Systems, Structured Alphanumeric Data, Structured Documents or Forms, EDI Messaging, Security of EDI, Relation of EDI with Electronic Funds Transfer, Electronic Billing, EDI Integration with Business Processes, Standardization of the Exchanges of Business-to-Business Electronic Commerce, Summary.

UNIT-3

16 Hours

SSL (Secure Sockets Layer):- General Presentation of the SSL Protocol, SSL Subprotocols, Example of SSL Processing, Performance Acceleration, Implementations, Summary. TLS (Transport Layer Security) and WTLS (Wireless Transport Layer Security):- From SSL to TLS, WTLS, Summary.

The SET Protocol:- SET Architecture, Security Services of SET, Certification, Purchasing Transaction, Optional Procedures in SET, SET Implementations, Evaluation, Summary.

UNIT-4

16 Hours

Composite Solutions:- C-SET and Cyber-COMM, Hybrid SSL/SET Architecture, 3-D Secure, Payments with CD-ROM, Summary.

Micropayments and Face-to-Face Commerce: Characteristics of Micropayment Systems, Potential Applications, Chipper, GeldKarte, Mondex, Proton, Harmonization of Electronic Purses, Summary.

Remote Micropayments:- Security without Encryption: First Virtual, NetBill, KLELine, Millicent, PayWord, MicroMint, eCoin, Comparison of the Different First-Generation Remote Micropayment Systems, Second-Generation Systems, Summary.

DEPARTMENT OF COMPUTER SCIENCE AND ENGINEERING

| NATURAL LANGUAGE PROCESSING Professional Elective (Code: PE08) | | | | | | | | | |
|--|---|--------------|-----------------------|---|----|--|--|--|--|
| Lectures | : | 3 Hours/Week | Continuous Assessment | : | 30 | | | | |
| Final Exam | : | 3 hours | Final Exam Marks | : | 70 | | | | |
| | | <u> </u> | <u> </u> | | · | | | | |

Pre-Requisite: Compiler Design (20CS601), Machine Learning (20CS602)

Course Objectives: Students will be able to

- Get familiarized with the concepts and techniques of Natural language Processing for analyzing words based on Morphology and CORPUS.
 - Make them understand the concepts of morphology, syntax, semantics and pragmatics
- ➤ of the language and that they are able to give the appropriate examples that will illustrate the above mentioned concepts.
- Recognize the significance of pragmatics for natural language understanding.
- > Be capable to describe the application based on natural language processing and to

Course Outcomes: Students will be able to

- CO-1 Apply the principles and processing of natural language processing using computers and create CORPUS linguistics based on dogestive pproach
- CO-2 Analyze the synatx, semantics and pragmatics of a statement written in a natural language and perform POS tagging for a given natural language.
- CO-3 Demonstrate the techniques for the text-based processing of natural language with respect to morphology.
- CO-4 Elarobate the feature engineering techniques needed for real time omplementation of various natural language applications.

Mapping of Course Outcomes with Program Outcomes & Program Specific Outcomes

| | | PO's | | | | | | | | | | | | PSO's | | | |

| CO-1 | 1 | 2 | 1 | 1 | 2 | - | 1 | 1 | 1 | 3 | 3 | 1 | 3 | 3 | 3 | | |
| CO-2 | 1 | 3 | 2 | 2 | 3 | 1 | - | - | 1 | 2 | 1 | 1 | 2 | 3 | 2 | | |
| CO-3 | 1 | 1 | 1 | 2 | 1 | - | - | - | 1 | 2 | 2 | 1 | 3 | 2 | 2 | | |
| CO-4 | 1 | 2 | 1 | 3 | 3 | 1 | - | 1 | 1 | 1 | 2 | 1 | 1 | 2 | 3 | | |

UNIT-1 13 Hours

Basics of NLP: - Evolution of Human Language, Text Mining, Need of Text Mining, Text Mining & Natural Language Processing, Basic Structure of a NLP Application, Understanding basic applications, Advantages of togetherness-NLP and Python.

Corpus Analysis: - What is a corpus? Why do we need a corpus? Understanding corpus analysis, Understanding types of data attributes, Exploring different file formats for corpora.

UNIT-2 13 Hours

Understanding the Structure of a Sentence: - Understanding components of NLP, Natural language understanding, Defining context-free grammar, Morphological analysis, Syntactic analysis, Semantic Analysis, Ambiguity, Handling Ambiguity, Discourse integration, Pragmatic analysis.

| UNIT-3 12 Hours | | | | | | | | |
|--|---|------------------|--|--|--|--|--|--|
| Preprocessing : - Handling corpus-raw, Handling corpus-raw sentences, Basic preprocessing, Practical and customized preprocessing. | | | | | | | | |
| UNIT-4 12 Hours | | | | | | | | |
| Feature Engineering and NLP Algorithms:- Understanding feature engineering, Basic feature of NLP, Basic statistical feature of NLP, Advantages of features engineering, Challenges of features engineering. | | | | | | | | |
| Text Books | Python Natural Language Processing (Packt Publishers) Autho | r: Jalaj Thanaki | | | | | | |
| References | Natural Language Processing (Oxford Publishers) Author: Tanvir Siddiqui | | | | | | | |

The Big Picture: Java EE Architecture, The Many Variations of Java EE Applications, Packaging and Deploying the Java EE Application, Java EE Platform and Implementations.

Classic Memories - JDBC: Introduction to JDBC, Structured Query Language, The JDBC APIs.

(Autonomous)

DEPARTMENT OF COMPUTER SCIENCE AND ENGINEERING

Java Servlets and Web Applications - Foundations of the Web Tier: The HTTP Protocol, Introducing Java Servlets, Understanding the Java Servlet API, Web Applications, Java Servlets: The Good and the Bad.

UNIT-2 15 Hours

Dynamic Web Pages - JSP: JSP Runtime Architecture, JSP Syntax, The Java Environment for JSPs, JSP Standard Tags, Custom Tag Libraries, Expression Language.

Assembling Dynamic Web Pages - JavaServer Faces: Architecture of a JSF Application, JavaServer Faces Tags, Java EE Managed Beans, f: Core Tags, JSTL Core Tags, Extensibility and Modularity.

UNIT-3 15 Hours

Web Sites for Non-browsers - JAX-RS: What Are RESTful Web Services, The Java API for RESTful Web Services, Deploying JAX-RS Resources, Content Production, Content Consumption, Accessing Web Service Context, Exception Mapping, Number of Instances of Resource Classes, Path Mapping.

JSON Processing : Streaming API : Consuming JSON Using the Streaming API, Producing JSON Using the Streaming API; **Object Model API :** Consuming JSON Using the Object Model API, Producing JSON Using the Object Model API.

Adding Sparkle - Java WebSockets: Introduction to the WebSocket Protocol, The WebSocket Lifecycle, Overview of the Java WebSocket API, Java WebSocket Encoders and Decoders, Message Processing Modes, Path Mapping, Deployment of Server Endpoints.

UNIT-4 15 Hours

The Fundamentals of Enterprise Beans: Introduction to Enterprise Beans, Hello Enterprise Beans, Flavors of Enterprise Beans, Exposing Enterprise Beans, Finding Enterprise Beans, EJB Lifecycle, Packaging Enterprise Beans.

Advanced Thinking with Enterprise Beans: Multi-threading and Enterprise Beans, Asynchronous Enterprise Beans, Enterprise Bean Contexts, The Timer Service, Transactions and Enterprise Beans, Interceptors.

Modern Memories - The Java Persistence API: Persistence Entities, The Entity Manager, Java Persistence Query Language, Configuring JPA Applications.

Pre-Requisite: Object Oriented Programming (20CS303)

Course Objectives: Students will be able to

- Understand the Android Application Architecture and Working.
- > Understand how to develop android applications and internal working of applications
- Understand Intents, Broadcast Receivers, Preferences.
- Understand to develop android applications using Databases, Content Providers, Services & Menus.

| Course Outcomes: Students will be able to | | | | | | |
|---|---|--|--|--|--|--|
| CO-1 | Create an Environment to develop Android applications. | | | | | |
| CO-2 | Design user Interfaces using Activities, Layouts & Fragments. | | | | | |
| CO-3 | Develop Android apps using intents and shared preferences. | | | | | |
| CO-4 | Develop android apps using SQLite database | | | | | |

| Lectures | : | 3 Hours/Week | Continuous Assessment | : | 30 | | | | |
| Final Exam | : | 3 hours | Final Exam Marks | : | 70 | | | | |

Pre-Requisite: Problem Solving using Programming (20CS203), Object Oriented Programming (20CS303), Operating Systems (20CS304), Computer Networks (20CS502), Web Technologies (20CS402)

Course Objectives: Students will be able to

- Understand the Cloud Computing environment, Windows Azure platform, and Azure websites service.
 - Configure Visual Studio with Azure SDK, develop applications to demonstrate Azure
- storage services Blob, Table, Queue and Files. Learn the concept of Azure storage Security.
- Demonstrate the concepts of Azure Virtual Machines and Azure Virtual Networks, Azure SQL.
- Learn Service Bus, Azure Active Directory, Azure Key Vault.

Course Outcomes: Students will be able to Configure visual studio with Azure SDK. Understand the basics of cloud computing, design and deploy ASP .NET web forms and MVC web sites to Azure cloud environment using VS. Design cloud service applications to demonstrate Azure storage services-Blob table queue and files. CO-3 Create and configure Azure virtual machines, Azure virtual networks and Azure SQL. CO-4 Write c# applications to access service bus.

UNIT-1 14 Hours

Introduction to Cloud Computing & Windows Azure Platform – What is Azure?, Overview of Cloud Computing, Comparison of on-premises versus Azure, Service models, Deployment models, Azure services, Azure Resource Manager, Azure subscriptions, Azure registration, Exploring Management portal.

Windows Azure Websites – Visual Studio – Introduction to .NET Framework, Introduction to ASP.NET, Razor syntax, Forms and validation, Working with data, Creating and publishing simple and database driven ASP.NET web sites.

UNIT-2 15 Hours

Cloud Applications - Software Development Kits, Windows Azure Tools for Visual Studio, Cloud Project with a Web Role, Deployment to Windows Azure, Configuration and Upgrading, Service

(Autonomous)

DEPARTMENT OF COMPUTER SCIENCE AND ENGINEERING

Definition File, Service Configuration File and Role Properties. Cloud applications using ASP.NET.

Windows Azure Storage - Local Storage Vs Azure Storage, Windows Azure Storage Account, Windows Azure Management Tool, Blobs, Tables, Queues, Files. Worker Roles - Queue Service. Security and Azure Storage - Securing your storage account, Securing access to your data, Securing your data in transit, Encryption at rest, Using Storage Analytics to audit access, Using Cross-Origin Resource Sharing (CORS).

UNIT-3 15 Hours

Virtual Machines – Introduction to Azure Virtual Machine, Virtual machine models, Virtual machine components, Virtual Machine creation, connecting to a virtual machine, configuring and managing virtual machine, scaling Azure virtual machine, Installing SQL server and J2EE Platform, Connecting to SQL Server on Virtual Machine.

Azure Virtual Networks – Introduction, Network Security Groups, Cross-premises connection options, Point-to-site network.

Azure SQL – Azure SQL Features, Database Server Creation in the Cloud, Azure SQL Relational Engine Features, Azure SQL Access, Existing Database Migration, Applications connecting to SQL Azure.

UNIT-4 15 Hours

Service Bus - Service Bus, Relayed messaging, Brokered Messaging- Queues, Topics.

Azure Active Directory - Overview of Azure Active Directory, Creating a directory, Users and groups, Multi-Factor Authentication, Application gallery.

Azure Key Vault - Basic concepts, Terminology used in Azure Key Vault, Ways to access Keys and Secrets in a Key Vault, Steps to authenticate an application with the Key Vault, Benefits of using Azure Key Vault.

|--------------------|------------------------------------|--------------------------------------|--|--|--|--|--|--|--|--|--|--|--|
| | Job Oriented Elective (Code: JO04) | | | | | | | | | | | | |
| Practicals | : | : 3 Hours/Week Continuous Assessment | | | | | | | | | | | |
| Final Exam | | | | | | | | | | | | | |

Pre-Requisite: Operating Systems(20CS304), Computer Networks(20CS502), Cryptography & Network Security(20CS603)

Course Objectives: Students will be able to

- Learn the Installations of different Tools (VMWare, Kali Linux, Windows OS, Metasploitable2, Veil frame work and DVWA).
 - Understand the usage of Information Gathering and MITMF tools. Learn how to
- detect/prevent intrusions in system by using snort and configuring firewall Settings using IPtables,
 - Learn how to hack a system and gathering information of a system using metasploit
- frame work and meterpreter shell commands, mechanisms for cracking passwords and wireless network attacks.
- Understand the usage of the Web application hijacking tools, DOS, Sql-injection, XSS and Phishing attacks.

CO-1 Install the different Tools (VMWare, Kali Linux, Windows OS, Metasploitable2, Veil framework and DVWA). CO-2 Test the Information Gathering and MITMF tools, Detect/prevent intrusions in system by using snort and configure firewall Settings using IPtables. CO-3 Practice the hacking and gathering information of a system using metasploit frame work and meterpreter shell commands, password cracking & wireless network attacks. CO-4 Test the Web application hijacking tools, DOS, Sql-injection, XSS and Phishing attacks.

|------------------------------------|---|--------------|-----------------------|---|----|--|--|--|--|--|--|--|--|
| Job Oriented Elective (Code: JO05) | | | | | | | | | | | | | |
| Lectures | : | 4 Hours/Week | Continuous Assessment | : | 50 | | | | | | | | |
| Final Exam | : | 3 hours | Final Exam Marks | : | 50 | | | | | | | | |
| | | | | | | | | | | | | | |

Pre-Requisite: Basic Knowledge of Hardware and Programming

Course Objectives: Students will be able to

- Make the students to know the IoT challenges and architectures.
- Provide an understanding of the technologies and the standards relating to the Internet of Things.
- Understanding the concept of M2M (machine to machine) with necessary protocols.
- Design and develop skills on IoT applications.

| Course | Outcomes: Students will be able to |
|--------|---|
| CO-1 | Identify the importance of IOT in real world. |
| CO-2 | Acquire skill of various sensors and its working. |
| CO-3 | Design of the IOT applications based on M2M and IOT design methodology. |
| CO-4 | Create the IOT applications for real time problems. |

UNIT-1 12 Hours

Introduction to IoT:

The flavour of the IoT, the technology of the IoT, characteristics of IoT, physical design of IoT, logical design of IoT, IoT enabling technologies, IoT levels & deployment templates

UNIT-2 10 Hours

Elements of IoT:

Hardware Components-Computing (Arduino, Raspberry Pi), Sensors, Actuators, I/O interfaces, Communication Protocols (ZigBee, Bluetooth, 6LoPAN, and MQTT), Software Components- Programming API's (using Python/Arduino).

UNIT-3 10 Hours

M2M and IoT Design Methodology:

M2M, Differences and Similarities between M2M and IoT, IoT Design Methodology.

UNIT-4 14 Hours

Cloud for IoT and Case Studies: Introduction, IoT with Cloud – Challenges, Selection of Cloud Service Provider for IoT Applications, Introduction to Fog Computing, Cloud Computing: Security Aspects,

Case Studies: Smart Lighting, Home Intrusion Detection, Smart Parking, Weather Monitoring

System, Smart Irrigation, and Adafruit Cloud

| Text Books: | 1. Internet of Things: A Hands-on-Approach, Arsh deep Bahga, Vijay |
|-------------|--|

LIST OF EXPERIMENTS

| Week # | Name of the Experiment | Specific Requirements |
|--------|---|---------------------------|
| 1. | Arduino Uno Development Kit: Familiarization | Arduino Uno hardwareand |
| | with Arduino Uno hardware, software, and perform necessary software installation. | software platforms |
| 2. | Outputting Digital Signal: | Arduino Uno (1), LED(2), |
| | a) Interface LED/Buzzer with Arduino Uno and | and Buzzer (1) |
| | writea program to turn ON LED for 1 sec after | |
| | every 2 seconds. | |
| | b) Interface Buzzer with Arduino Uno and write a | |
| | program to turn ON sound by Buzzer for 2 | |
| l | seconds. | |
| 3. | Inputting Digital Signal: | Arduino Uno (1), Push |
| | a) Interface push button and LED with Arduino Uno | buttons(2), LED (2), |
| | and write a program to turn ON LED when push | Buzzer (1), and IR sensor |
| | button is pressed. | module (1) |
| | b) Interface digital sensor (IR-infrared sensor) | |
| | with Arduino Uno and write a program to | |
| | turn ON | |
| | Sound by Buzzer when object detects. | |

| 4. | Inputting Analog Signal: | Arduino Uno (1), |
|----|---|------------------------|
| | a) Interface Potentiometer with Arduino Uno and | Potentiometer (1), LED |
| | write a program to increase and decrease light | (2), and LDR |
| | intensity of LED. | sensor module (1) |
| | b) Interface LDR light sensor with Arduino and | , , |
| | writea program to control LED. | |

| CO-3 | - | 2 | - | 1 | - | 3 | - | 2 | - | 3 | - | - | 2 | 2 | _ |
| CO-4 | _ | 2 | - | 3 | _ | - | 1 | - | _ | 2 | - | - | 1 | - | 1 |

UNIT-1 15 Hours

Big Data Analytics: Introduction to Big Data Analytics, Characteristics of Big Data, Sources of Big Data, Applications of Big Data.

HADOOP: Introduction to Hadoop, Hadoop components, Configuration of Hadoop.

The Hadoop Distributed File System: The design of HDFS,HDFS concepts, The command line interpreter, Basic File system operations, Hadoop File System, Interfaces Data flow, parallel copying with distep.

UNIT-2 15 Hours

YARN: Anatomy of YARN application run, YARN compared to Map Reduce 1, Scheduling in YARN.

How Map Reduce Works: Anatomy of Map Reduce job run, Failures, Shuffle and sort, Task execution.

Map Reduce Features-Counters, sorting, joins side data distribution, Writing map reduce programs, deploying map reduce programs on Hadoop Cluster.

UNIT-3 15 Hours

Installing and Running Pig-Execution Types, Running Pig Programs, Grunt, Pig Latin Editors, An Example, Comparison with Databases, Pig Latin-Structure, Statements, Expressions, Types, Schemas, Functions, Macros, User-Defined Functions-A Filter UDF, An Eval UDF, Data Processing Operators- Loading and Storing Data, Filtering Data, Grouping and Joining Data,

(Autonomous)

DEPARTMENT OF COMPUTER SCIENCE AND ENGINEERING

Sorting Data, Combining and Splitting Data, Pig in Practice-Parallelism, Anonymous Relations, Parameter Substitution.

Installing Hive, The Hive Shell, An example, Running Hive, Configuring Hive, Hive Services, The Metastore, Comparison with traditional databases, Schema on Read versus Schema on Write, Update, transactions and Indexes, SQL on Hadoop alternatives, HiveQL, Data types, Operators and functions, Tables, Querying Data-sorting and aggregating, MapReduce Script, joins, Sub queries, Views.

| UNIT-4 | 12 Hours |
|-----------------|----------|
| U1 111-4 | 12 Hours |

Spark: Installing spark, an example spark application, jobs, stages, tasks, a scalastand alone application, anatomy of spark job run, job submission, DAG construction, task scheduling, task execution, execution cluster managers, spark on YARN.

Sqoop: Getting Sqoop, Sqoop Connectors, A Sample Import, Text and Binary File Formats, Generated Code, Additional Serialization Systems, Imports: A Deeper Look, Controlling the Import, Imports and Consistency.

|---|------------------|---------------------------------|----|--|--|--|--|--|
| Practicals: | 3 Periods / Week | Continuous Internal Assessment: | 30 | | | | | |
| Final Exam : | 3 hours | Semester End Exam : | 70 | | | | | |

Course Outcomes: Students will be able to

- ➤ Understand the concepts of Data mining and Big Data Analytics
- Apply machine learning algorithms for data analytics
- Analyze various text categorization algorithms
- Use Technology and tools to solve the Big Data Analytics problems

| | | PO's | | | | | | | | | PSO's | | | | |
|------|---|------|---|---|---|---|---|---|---|----|-------|----|---|---|---|
| CO | 1 | 2 | 3 | 4 | 5 | 6 | 7 | 8 | 9 | 10 | 11 | 12 | 1 | 2 | 3 |
| CO-1 | 3 | - | - | - | - | - | - | - | - | - | - | - | 2 | - | 3 |
| CO-2 | - | 3 | 1 | - | - | - | - | - | - | 1 | - | 1 | 1 | 2 | - |
| CO-3 | - | 2 | 1 | - | - | - | - | - | - | 1 | - | 1 | 1 | - | 3 |
| CO-4 | - | 2 | 2 | - | - | - | - | - | - | 3 | - | 1 | 1 | 3 | 2 |

LIST OF EXPERIMENTS

- 1. Write the steps for installation of Hadoop.
- 2. Write commands to interact with HDFS interface.
- 3. Write a Map Reduce program for Word Count Example.
- 4. Write a Map Reduce program for Card Count data set.
- 5. Write the steps for installation of Pig.
- 6. Write the word count script using Pig Latin.
- 7. Illustrate the basic Pig Latin concepts with help of any dataset.
- 8. Write the steps for installing Hive.
- 9. Illustrate the creation, loading & complete select statements in Hive.
- 10. Write the script how data will be transfer using Sqoop.

- a. to implement timers.
- b. to demonstrate different ways of performing read/write operations in local file system.
- 2. Code a basic Node.JS user registration application.
- 3. Create a CRUD application using data from local file system.
- 4. Create a CRUD web application using data from MongoDB server.
- 5. Refactor the above program to separate
 - a. Model operations
 - b. Controller operations

(Autonomous)

DEPARTMENT OF COMPUTER SCIENCE AND ENGINEERING

6. Code Angular applications to demonstrate
a. Data binding.
b. Directives
c. Data sharing between parent/child components.

7. Create an Angular CRUD application that interacts with a REST API.

UNIT-I 12 Periods

DevOps Basics & Version Control: Definition of DevOps, DevOps Stakeholders, DevOps goals, DevOps life cycle.

Version Control, Continuous Integration, Continuous Delivery, Continuous Deployment, Continuous Monitoring.

Git basics, Git features, installing Git, Git essentials, common commands in Git, working with remote repositories using GitHub.

(Autonomous)

DEPARTMENT OF COMPUTER SCIENCE AND ENGINEERING

List of Experiments

- 1. Demonstrate Deploying an Application to GitHub.
- 2. Demonstrate working with Git Shell commands.
- 3. Demonstrate working with remote repositories.

UNIT-II

12 Periods

Continuous Integration using Jenkins: Introduction-Understanding Continuous Integration, introduction about Jenkins, Build Cycle, Jenkins Architecture, installation, Jenkin management. Adding a slave node to Jenkins, Building Delivery Pipeline, Pipeline as a Code.

List of Experiments

- 1. Demonstrate creation of maven application.
- 2. Demonstrate Building Delivery Pipeline (Continuous Integration) using Jenkins.

UNIT-III

12 Periods

Continuous Delivery: Configuration management, and application deployment functionality using Ansible, Containerization with Docker, Containerization using Kubernetes.

List of Experiments

- 1. Demonstrate CI/CD job to build code on ansible and deploy it on container.
- 2. Demonstrate Containerization with Docker.
- 3. Demonstrate Containerization with Kubernetes.

UNIT-1 (14 Hours)

INTRODUCTION TO ROBOTIC PROCESS AUTOMATION: Scope and techniques of automation, Robotic process automation What can RPA do? Benefits of RPA, Components of RPA, RPA platforms, The future of automation. RPA BASICS: History of Automation What is RPA RPA vs Automation Processes & Flowcharts Programming Constructs in RPA What Processes can be Automated Types of Bots Workloads which can be automated RPA Advanced Concepts Standardization of processes RPA Development methodologies Difference from SDLC Robotic control flow architecture RPA business case RPA Team Process Design Document/Solution Design Document Industries best suited for RPA Risks & Challenges with RPA RPA and emerging ecosystem.

UNIT-2 (15 Hours)

RPA TOOL INTRODUCTION AND BASICS: Introduction to RPA Tool - The User Interface - Variables - Managing Variables - Naming Best Practices - The Variables Panel - Generic Value Variables - Text Variables - True or False Variables - Number Variables - Array Variables - Date and Time Variables - Data Table Variables - Managing Arguments - Naming Best Practices - The Arguments Panel - Using Arguments - About Imported Namespaces - Importing New Namespaces-Control Flow - Control Flow Introduction - If Else Statements - Loops - Advanced Control Flow - Sequences - Flowcharts - About Control Flow - Control Flow Activities - The Assign Activity - The Delay Activity - The Do While Activity - The If Activity - The Switch Activity - The While Activity - The For Each Activity - The Break Activity - Data Manipulation - Data Manipulation Introduction - Scalar variables, collections and Tables - Text Manipulation - Data Manipulation - Gathering and Assembling Data

UNIT-3 (16 Hours)

(Autonomous) DEPARTMENT OF COMPUTER SCIENCE AND ENGINEERING

ADVANCED AUTOMATION CONCEPTS & TECHNIQUES: Recording Introduction - Basic and Desktop Recording - Web Recording - Input/Output Methods - Screen Scraping - Data Scraping - Scraping advanced techniques - Selectors - Defining and Assessing Selectors -

| Customization | - Debugging - Dynamic Selectors - Partial Selectors - RPA Challenge | - Image, Text | | | | | | | |
|--|---|-----------------|--|--|--|--|--|--|--|

DEPARTMENT OF COMPUTER SCIENCE AND ENGINEERING

| | | DATABASE MANAGEME | NT SYSTEMS | | |
|------------|---|-------------------------|-----------------------|---|----|
| | | Open Elective (Code: 20 | OCSOE01) | | |
| Lectures | : | 3 Hours/Week | Continuous Assessment | : | 30 |
| Final Exam | : | 3 hours | Final Exam Marks | : | 70 |

Pre-Requisite: None

Course Objectives: Students will be able to

- Familiarize with fundamental concepts of database and various database architectures and Design relations for Relational databases using conceptual data modeling.
- > Implement formal relational operations in relational algebra and SQL.
- > Identify the Indexing types and normalization process for relational databases
- Use mechanisms for the development of multi user database applications.

| Course | Outcomes: Students will be able to |
|--------|---|
| | Ability to apply knowledge of database design methodology which give a good formal |
| CO-1 | foundation in relational data model and Understand and apply the principles of data |
| | modeling using ER Model. |
| CO-2 | Familiar with relational DB theory and will able to write relational algebra expressions, |
| CO-2 | Relational Calculus and SQL.for query |
| CO-3 | Design database schema and Identify and solve the redundancy problem in database |
| CO-3 | tables using normalization. |
| CO-4 | Understand transaction processing, concurrency control and recovery techniques. |

Mapping of Course Outcomes with Program Outcomes & Program Specific Outcomes

| CO-4 | 1 | 3 | 3 | 1 | - | - | - | - | - | - | - | _ | - | 3 | - |

UNIT-1 (12 Hours)

Databases and Database Users: Introduction - An Example - Characteristics of the Database Approach - Actors on the Scene - Workers behind the Scene - Advantages of Using the DBMS Approach - A Brief History of Database Applications - When Not to Use a DBMS.

Database System Concepts and Architecture: Data Models, Schemas, and Instances - Three-Schema Architecture and Data Independence - Database Languages and Interfaces - The Database System Environment - Centralized and Client/Server Architectures for DBMSs - Classification of Database Management Systems.

Data Modeling Using the Entity-Relationship (ER) Model: Using High-Level Conceptual Data Models for Database Design - An Example Database Application - Entity Types, Entity Sets, Attributes, and Keys - Relationship Types, Relationship Sets, Roles, and Structural Constraints - Weak Entity Types - Refining the ER Design for the COMPANY Database - ER Diagrams, Naming Conventions, and Design Issues.

UNIT-2 (12 Hours)

The Relational Data Model and Relational Database Constraints: Relational Model Concepts
- Relational Model Constraints and Relational Database Schemas - Update Operations,

(Autonomous)

DEPARTMENT OF COMPUTER SCIENCE AND ENGINEERING

Transactions, and Dealing with Constraint Violations - Relational Database Design Using ER-to-Relational Mapping.

Basics of SQL: DDL, DML and DCL Commands.

UNIT-3 (12 Hours)

Functional Dependencies and Normalization for Relational Databases: Informal Design Guidelines for Relation Schemas - Functional Dependencies - Normal Forms Based on Primary Keys - General Definitions of Second and Third Normal Forms, Boyce-Codd Normal Form.

Relational Database Design Algorithms and Further Dependencies: Properties of Relational Decompositions - Algorithms for Relational Database Schema Design – Multivalued Dependencies and Fourth Normal Form - Join Dependencies and Fifth Normal Form.

UNIT-4 (12 Hours)

Introduction to Transaction Processing Concepts and Theory: Introduction to Transaction Processing - Transaction and System Concepts - Desirable Properties of Transactions - Characterizing Schedules Based on Recoverability - Characterizing Schedules Based on serializability.

Concurrency Control Techniques: Two-Phase Locking Techniques for Concurrency Control - Concurrency Control Based on Timestamp Ordering – Multiversion Concurrency Control Techniques - Validation (Optimistic) Concurrency Control Techniques - Granularity of Data Items and Multiple Granularity Locking.

| and Multiple (| Granularity Locking. |

| Final Exam | : | 3 hours | Final Exam Marks | : | 70 |

Pre-Requisite: Programming for Problem Solving

Course Objectives: Students will be able to

- Understand advantages of OO programming over procedural oriented programming, learn the basics of variables, operators, control statements, arrays, classes and objects.
- Understand, write and implement the following concepts: Inheritance, Interfaces, Packages, Strings and Collections.
- Understand and write programs on Exception Handling, I/O, and Multithreading.
- > Understand and implement applications using Applets, AWT, Swings and Events.

| Course | Outcomes: Students will be able to |
|--------|---|
| CO-1 | Demonstrate OOP concepts, its advantages over structured programming. |
| CO-2 | Develop and implement Inheritance, polymorphism. |
| CO-3 | Analyze Exception Handling, Multithreading, I/O. |
| CO-4 | Create code for Event Handling, Applets, AWT and Swings. |

UNIT-1 (12 Hours)

Introduction: Introduction to java, data types, dynamic initialization, scope and life time, operators, control statements, arrays, type conversion and casting, finals & blank finals.

Classes and Objects: Concepts, methods, constructors, usage of static, access control, this key word, garbage collection, overloading, parameter passing mechanisms, nested classes and inner classes.

Inheritance: Basic concepts, access specifires, usage of super key word, method overriding, final methods and classes, abstract classes, dynamic method dispatch, Object class.

Interfaces: Differences between classes and interfaces, defining an interface, implementing interface, variables in interface and extending interfaces.

Packages: Creating a Package, setting CLASSPATH, Access control protection, importing packages.

Strings: Exploring the String class, String buffer class, Command-line arguments.

UNIT-2 (12 Hours)

Exception Handling: Concepts of Exception handling, types of exceptions, usage of try, catch, throw, throws and finally keywords, Built-in exceptions, creating own exception sub classes.

Multithreading: Concepts of Multithreading, differences between process and thread, thread life cycle, Thread class, Runnable interface, creating multiple threads, Synchronization, thread priorities.

(Autonomous)

DEPARTMENT OF COMPUTER SCIENCE AND ENGINEERING

Applets: Concepts of Applets, life cycle of an applet, creating applets, passing parameters to applets, accessing remote applet, Color class and Graphics UNIT-3 (12 Hours) Event Handling: Events, Event sources, Event classes, Event Listeners, Delegation event model, handling events. AWT: AWT Components, windows, canvas, panel, File Dialog boxes, Layout Managers, Event handling model of AWT, Adapter classes, Menu, Menu bar. **UNIT-4** (12 Hours) Swing-I – swings introduction, JApplet, JFrame and JComponent, Icons and Labels, text fields, buttons – The JButton class, Check boxes, Radio buttons. JDBC Connectivity: Jdbc connectivity, types of Jdbc Drivers, connecting to the database, Jdbc Statements, Jdbc Exceptions, Manipulations on the database, Metadata. Text Books: 1. "The Complete Reference Java J2SE", 7th Edition, Herbert Schildt, TMH Publishing Company Ltd, New Delhi. 2. "Big Java", 2nd Edition, Cay Horstmann, John Wiley and Sons, Pearson Education. **References:** 1. "Java How to Program", Sixth Edition, H.M.Dietel and P.J.Dietel, Pearson Education/PHI. 2. | CO-4 unde | rstar | nd the techniques in power g | generation using Fuel cells, bio gas ar | nd MHI | D | | | | | | | |
| | | UNIT-1 | | (12 H | | | | | | | | |

Various non-conventional energy resources- Introduction, availability, classification, relative merits and demerits Solar Energy: Extra terrestrial solar radiation - terrestrial solar radiation -solar radiations on earth-measurement of solar radiations-solar constant-solar collectors-flat plate collectors-concentrating collectors-solar thermal conversion-solar thermal central receiver systems - photovoltaic energy conversion - solar cells- energy storage methods-applications of solar energy

UNIT-2

Wind energy: Availability of wind energy in India, site selection-Components of wind energy conversion systems-Classification of wind energy conversion systems-vertical axis and horizontal axis wind turbines- Performance characteristics-Betz criteria coefficient-applications of WECSenvironmental aspects

Geo thermal Energy: Structure of earth's interior-geothermal sites-geothermal resources-Site selection for geothermal power plants-Principle of working-various types of geothermal power plants- applications

> **UNIT-3** (12 Hours)

Ocean thermal energy conversion (OTEC): Principle of ocean thermal energy conversion-Open cycle and closed cycle OTEC plants-Merits and demerits

Tidal Power: Tides and waves as sources of energy-fundamentals and use of tidal energylimitations of tidal energy conversion system

Bio mass: Availability of biomass and its conversion techniques-bio mass gasification-bio mass resource development in India

> **UNIT-4** (12 Hours)

Bio Gas: Bio gas production, aerobic and anaerobic bio conversion process-Properties of bio gasclassification of biogas plants-advantages and disadvantages-bio gas applications

Fuel Cells: Classification, Principle of working of various types of fuel cells, merits and demerits, future potential of fuel cells.

Magneto-Hydrodynamics (MHD): Principle of working of MHD Power plant, Classification, advantages and disadvantages.

|--|------------|---------|-------|------------------------------------|--------------------------------------|----------|----------|
| Pre-Requisite: None CO-1 identify signal degradation and losses in optical fibers. CO-2 understand power launching and coupling in optical fibers. CO-3 measure optical parameters and optical signal losses. UNIT-1 (12 Hours) Fiber optical wave guides: Introduction total internal reflection types of fibers, planar dielectric wave guide, optical fiber wave guides-inter-modal dispersion, single mode fibers, low dispersion fibers. Signal degradation in optical fibers: Attenuation, Absorption, Scattering losses, Radioactive losses signal distortion in optical wave guide dispersion) UNIT-2 (12 Hours) Power launching and coupling: Source to fiber power launching, source output pattern power-coupling calculation, power launched verss wave length, equilibrium numerical. Aperture lensing schemes for coupling improvement nanimaging micro sphere. Laser diode-to-fiber-coupling, fiber-to-fiber joints, mechanical misalignment, fiber-related losses, fiber end face preparation, fiber splicing optical fiber connectors. UNIT-3 (12 Hours) Transmission link analysis: point —to-point links, system consideration, link power budget, rise time budget, transmission distance for single model links, wave length division multiplexing (WDM) passive components, the 2x2 fiber coupler, the 2x2 wave guide coupler, star coupler to-darea network. UNIT-4 (12 Hours) Measurement attenuation Measurement — inter modal diaspersion measurement, Frequency domain inter modal diaspersion measurement, Frequency domain inter modal diaspersion measurement, OTDR fiber application, OTDR Trace, attenuation measurements fiberfault location. Text Books: 1. Willaml & Hawkes F.B opto electronics: An introduction.(PHI) 2. Gerd Keiser optical fiber communication (3 rd edition McGraw Hill) | Lacturac | , | | * | | 1. | 30 |

| Honer Course (Code: B) | | | | | | | | |
| Lectures | : | 4 Hours/Week | Continuous Assessment | : | 30 | | | |
| Final Exam | : | 3 hours | Final Exam Marks | : | 70 | | | |
| | | | | | | | | |

Pre-Requisite:

UNIT-1 (15 Hours)

Parallel Computer Models: The state of computing, Classification of parallel computers, Multiprocessors and Multi computers, Multi-vector and SIMD computers.

Program and network properties: Conditions of parallelism, Data and resource Dependencies, Hardware and Software parallelism, Program partitioning and scheduling, Grain Size and latency, Program flow mechanisms, Control flow versus data flow, Data flow Architecture, Demand driven mechanisms, Comparisons of flow mechanisms.

System Interconnect Architectures: Network properties and routing, Static interconnection Networks, Dynamic interconnection Networks, Hierarchical bus systems, Crossbar switch and multiport memory, Multistage and combining network.

UNIT-2 (15 Hours)

Principles of Scalable Performance: Performance Metrics and Measures: Parallelism Profile in Programs, Efficiency, Utilization and Quality, Standard Performance Measures, Speedup Performance Laws: Amdahl's law for fixed load, Gustafson's law for scaled problems, Memory Bounded Speedup Model.

Pipelining: Linear pipeline processor, nonlinear pipeline processor, Instruction pipeline Design-Instruction Execution Phases, Mechanisms for instruction pipelining, Dynamic instruction scheduling, Branch Handling techniques, Arithmetic Pipeline Design: Computer Arithmetic principles, Static Arithmetic pipeline, Multifunctional arithmetic pipelines.

UNIT-3 (15 Hours)

MULTI Processors: Multiprocessor System Interconnect: Hierarchical Bus Systems, Crossbar Switch and Multiport Memory, Multistage and Combining Networks, Cache Coherence and Synchronization Mechanisms: The Cache Coherence problem, Snoopy Bus Protocols, Directory Based Protocols, Hardware Synchronization Mechanisms, Message-passing Mechanism: Message Routing Schemes, Deadlock and Virtual Channels, Flow Control Strategies, Multicast Routing Algorithms.

Scalable, Multithreaded and Dataflow Architectures: Latency-Hiding Techniques, Principles of Multithreading, Scalable and Multithreaded Architectures.

UNIT-4 (15 Hours)

Thread Based Parallelism: Introduction, Using the python threading model, How to define a Thread, How to determine a current Thread, How to use a thread in subclass, Thread Synchronization with Lock and RLock, Thread Synchronization with RLock, Thread Synchronization with Semaphores, Thread Synchronization with a Condition, Thread Synchronization with an Event, Using a with Statement, Thread Communication with a Queue, Evaluating the performance of Multithreaded applications.

Process Based Parallelism: Introduction, How to spawn a process, How to name a Process, How to run a Process in the background, How to kill a process, How to use a process in subclass, how to exchange objects between processes, How to synchronize the Processes, How to manage a state between Processes, How to use a Process pool, Using the mpi4py python module, Point-to-Point to Communications, Avoiding Dedalock problems, Collective communication using Broadcast, Collective Communication using a Scatter, Collective Communication using Gather, Collective Communication using Alltoall, The reduce operation, How to Optimize an Operation.

| WEB MINING | | | | | |
|------------------------|---|--------------|-----------------------|---|----|
| Honer Course (Code: I) | | | | | |
| Lectures | : | 4 Hours/Week | Continuous Assessment | : | 30 |
| Final Exam | : | 3 hours | Final Exam Marks | : | 70 |
| Pre-Requisite: None | | | | | |

UNIT-1

(13 Hours)

INTRODUCTION:

Introduction – Web Mining – Theoretical background –Algorithms and techniques – Association rule mining – Sequential Pattern Mining -Information retrieval and Web search – Information retrieval Models-Relevance Feedback- Text and Web page Pre-processing – Inverted Index – Latent Semantic Indexing – Web Search – Meta-Search – Web Spamming.

UNIT-2 (13 Hours)

WEB CONTENT MINING:

Web Content Mining – Supervised Learning – Decision tree - Naïve Bayesian Text Classification -Support Vector Machines - Ensemble of Classifiers. Unsupervised Learning - Kmeans Clustering - Hierarchical Clustering – Partially Supervised Learning – Markov Models - Probability-Based Clustering - Evaluating Classification and Clustering – Vector Space Model – Latent semantic Indexing – Automatic Topic Extraction - Opinion Mining and Sentiment Analysis – Document Sentiment Classification.

UNIT-3 (13 Hours)

WEB LINK MINING:

Web Link Mining – Hyperlink based Ranking – Introduction -Social Networks Analysis-CoCitation and Bibliographic Coupling - Page Rank -Authorities and Hubs -Link-Based Similarity Search -Enhanced Techniques for Page Ranking - Community Discovery – Web Crawling -A Basic Crawler Algorithm- Implementation Issues- Universal Crawlers- Focused CrawlersTopical Crawlers-Evaluation - Crawler Ethics and Conflicts - New Developments.

UNIT-4 (13 Hours)

STRUCTURED DATA EXTRACTION:

Structured Data Extraction: Wrapper Generation – Preliminaries- Wrapper InductionInstance-Based Wrapper Learning ·- Automatic Wrapper Generation: Problems - String Matching and Tree Matching -. Multiple Alignment - Building DOM Trees - Extraction Based on a Single List Page and Multiple pages- Introduction to Schema Matching - Schema-Level Match -Domain and Instance-Level Matching – Extracting and Analyzing Web Social Networks.

UNIT-I 15 Periods

The Semantic Web Vision, Today's Web, Semantic Web Technologies, A Layered Approach Structured Web Documents in XML, Motivation and Overview, the XML Language Structuring, DTDs, XML Schema, Namespaces, Addressing and Querying XML Documents Processing.

UNIT-2 15 Periods

Describing Web Resources in RDF, Motivation and Overview, RDF: Basic Ideas, RDF: XML-Based Syntax RDF Schema: Basic Ideas, RDF Schema: The Language, RDF and RDF Schema in RDF Schema, An Axiomatic Semantics for RDF and RDF Schema, RDF, RDF Schema A direct inference system for RDF(S) Querying in RQL.

Web Ontology Language: OWL, Motivation and Overview, the OWL Language, Examples An African Wildlife Ontology, printer ontology, OWL in OWL, Future extensions.

UNIT-3 15 Periods

Logic and Inference: Rules , Motivation and Overview , An Example of Monotonic Rules: Family Relations , Monotonic Rules: Syntax , Monotonic Rules: Semantics , Nonmonotonic Rules: Motivation and Syntax , An Example of Nonmonotonic Rules: Brokered Trade , Rule Mark-up in XML: Monotonic Rules Rule Mark-up in XML: Nonmonotonic Rule

Applications: Introduction, Horizontal information products from Elsevier, Data integration at Boeing (and elsewhere), Skill-finding at Swiss Life, Think-tank portal at Ener Search, eLearning, Web Services, Other applications scenarios.

Introduction: What OSs Do, Computer System Operation, Storage structure, OS Structure, OS Operations.

Operating-System Structures: OS Services, User and operating system Interface, System Calls, Types of System Calls, System Programs, OS Design and Implementation, OS Structure.

Processes: Process Concept, Process Scheduling, Operations on Processes, Inter- process Communication.

Threads: Overview, Multicore Programming, Multithreading Models.

(Autonomous)

DEPARTMENT OF COMPUTER SCIENCE AND ENGINEERING

[Sections:1.1, 1.2.1, 1.2.2,1.4,1.5, 1.5.1,2.1, 2.2,2.3,2.4, 2.5, 2.6, 2.7,2.7.1,2.7.2,2.7.3,2.7.4

3.1, 3.2,3.3,3.4, 4.1,4.2,4.3]

UNIT-2

12 Hours

CPU Scheduling: Basic Concepts, Scheduling Criteria, Scheduling Algorithms.

Process Synchronization: Background, The Critical-Section Problem, Peterson's Solution, Synchronization Hardware, Mutex Locks, Semaphores, Classic problems of Synchronization, Monitors.

[Sections : 6.1,6.2,6.3, 5.1,5.2,,5.3,5.4,5.5,5.6,5.7,5.8]

UNIT-3

12 Hours

Deadlocks: System Model, Deadlock Characterization, Methods for Handling Deadlocks, Deadlock Prevention, Avoidance, Detection and Recovery.

Main Memory: Background, Swapping, Contiguous Memory Allocation, Segmentation, Paging, Structure of Page Table.

Virtual-Memory: Background, Demand Paging, Copy-on-Write, Page Replacement, Allocation of Frames, Thrashing, Other Considerations.

[Sections; 7.1,7.2,7.3,7.4,7.5,7.6,7.7,8.1,8.2,8.3,8.4,8.5,8.6,9.1, 9.2,9.3,9.4,9.5,9.6,9.9]

UNIT-4

12 Hours

File System Interface: File concept, Access Methods, Directory and Disk Structure,

File System Implementation: File System Structures, Directory Implementation, Allocation Methods

Protection: Goals of Protection, Principles of Protection, Domain of Protection- Domain Structure, Access Matrix, Implementation of Access Matrix.

Mass Storage Structure: Over View, Disk Structure, Disk Scheduling, Disk Management, RAID levels

[Sections:10.1,10.2,10.4,10.5,10.7,11.1,11.2,11.3,11.5,12.1,12.3,12.4,14.1,14.2,14.3,14.3.1,1 4.4,14.5]

The History and Evolution of Java

An Overview of Java

Data Types, Variables and Arrays

Operators

Control Statements

Introducing Classes

A Closer Look at Methods and Classes

UNIT-2 12 Hours

Inheritance

Packages and Interfaces

Strings: String Constructors, Any 10 String class methods, StringBuffer class, Any 10 StringBuffer class methods, Introducing StringBuilder class.

Type Wrappers: Auto boxing/unboxing.

Collections: Collections Overview, Names of Collection Interfaces,

Collection Classes: LinkedList<String>, Array List<String>

UNIT-3 12 Hours

(Autonomous)

DEPARTMENT OF COMPUTER SCIENCE AND ENGINEERING

Exception Handling

Multithreaded Programming

I/O: I/O Basics, Reading Console Input, Writing Console Output, The Print Writer class, Reading and Writing Files, Automatically Closing a File.

UNIT-4 12 Hours

The Applet Class: Applet Architecture, An Applet Skeleton, Applet program to draw shapes, setting Color, Font using Graphics class

Event Handling:

Introducing the AWT: Window Fundamentals, AWT components: Label, Text Field, Text Area, Checkbox, Checkbox Group, Button, Layout Managers: Flow Layout, Grid Layout, and Border Layout.

GUI Programming with Swing: The Origins of Swing, Advantages of Swing over AWT, The MVC Connection, **Swing Components:** JLabel, JText Field, JText Area, JCheck box, JButton, JTabbed Pane, JTable, JTree, JCombo Box

| | Hours/Week | Hours/Week Continuous Assessment | Hours/Week Continuous Assessment : | | | | | | | | | |

Pre-Requisite: None

Course Objectives: Students will be able to

- Familiarize with fundamental concepts of database and various database architectures and Design relations for Relational databases using conceptual data modeling.
- > Implement formal relational operations in relational algebra and SQL.
- ➤ Identify the Indexing types and normalization process for relational databases
- Use mechanisms for the development of multi user database applications.

CO-1 Ability to apply knowledge of database design methodology which give a good formal foundation in relational data model and Understand and apply the principles of data modeling using ER Model. CO-2 Familiar with relational DB theory and will able to write relational algebra expressions, Relational Calculus and SQL.for query Design database schema and Identify and solve the redundancy problem in database tables using normalization.

CO-4 Understand transaction processing, concurrency control and recovery techniques.

UNIT-1 (12 Hours)

Databases and Database Users: Introduction - An Example - Characteristics of the Database Approach - Actors on the Scene - Workers behind the Scene - Advantages of Using the DBMS Approach - A Brief History of Database Applications - When Not to Use a DBMS.

Database System Concepts and Architecture: Data Models, Schemas, and Instances - Three-Schema Architecture and Data Independence - Database Languages and Interfaces - The Database System Environment - Centralized and Client/Server Architectures for DBMSs - Classification of Database Management Systems.

Data Modeling Using the Entity-Relationship (ER) Model: Using High-Level Conceptual Data Models for Database Design - An Example Database Application - Entity Types, Entity Sets, Attributes, and Keys - Relationship Types, Relationship Sets, Roles, and Structural Constraints - Weak Entity Types - Refining the ER Design for the COMPANY Database - ER Diagrams, Naming Conventions, and Design Issues.

UNIT-2 (12 Hours)

The Relational Data Model and Relational Database Constraints: Relational Model Concepts
- Relational Model Constraints and Relational Database Schemas - Update Operations,

(Autonomous)

DEPARTMENT OF COMPUTER SCIENCE AND ENGINEERING

Transactions, and Dealing with Constraint Violations - Relational Database Design Using ER-to-Relational Mapping.

Basics of SQL: DDL, DML and DCL Commands.

UNIT-3 (12 Hours)

Functional Dependencies and Normalization for Relational Databases: Informal Design Guidelines for Relation Schemas - Functional Dependencies - Normal Forms Based on Primary Keys - General Definitions of Second and Third Normal Forms, Boyce-Codd Normal Form.

Relational Database Design Algorithms and Further Dependencies: Properties of Relational Decompositions - Algorithms for Relational Database Schema Design – Multivalued Dependencies and Fourth Normal Form - Join Dependencies and Fifth Normal Form.

UNIT-4 (12 Hours)

Introduction to Transaction Processing Concepts and Theory: Introduction to Transaction Processing - Transaction and System Concepts - Desirable Properties of Transactions - Characterizing Schedules Based on Recoverability - Characterizing Schedules Based on serializability.

Concurrency Control Techniques: Two-Phase Locking Techniques for Concurrency Control - Concurrency Control Based on Timestamp Ordering – Multiversion Concurrency Control Techniques - Validation (Optimistic) Concurrency Control Techniques - Granularity of Data Items and Multiple Granularity Locking.

| and Multiple (| franularity Locking. |

INTRODUCTION TO SOFTWARE ENGINEERING: The Evolving Role of Software, Software, the Changing Nature of Software, Legacy Software, Software Myths.

A GENERIC VIEW OF PROCESS: Software Engineering - A Layered Technology, a Process Framework, the CMMI, Process Patterns, Process Assessment, Personal and Team Process Models, Product and Process.

PROCESS MODELS: Prescriptive Models, the Waterfall Model, Incremental Process Models, Evolutionary Models, the Unified Process.

UNIT-2 15 Periods

AN AGILE VIEW OF PROCESS: What Is Agility? , What Is an Agile Process? , Agile Process Models.

REQUIREMENTS ENGINEERING: A Bridge To Design and Construction, Requirements Engineering Tasks, Initiating the Requirements Engineering Process, Eliciting Requirements,

(Autonomous)

DEPARTMENT OF COMPUTER SCIENCE AND ENGINEERING

Developing Use-cases, Building the Analysis Model, Negotiating Requirements, Validating Requirements.

BUILDING THE ANALYSIS MODEL: Requirements Analysis, Analysis Modeling Approaches, Data Modeling Concepts, Flow-Oriented Modeling, Class Based Modeling Creating a Behavioral Model.

UNIT-3 15 Periods

DESIGN ENGINEERING: Design within the Context of Software Engineering, Design Process and Design Quality, Design Concepts The Design Model, Pattern Based Software Design.

CREATING AN ARCHITECTURAL DESIGN: Software Architecture, Data Design, Architectural Styles and Patterns, Architectural Design, Assessing Alternative Architectural Designs.

MODELING COMPONENT-LEVEL DESIGN: What Is a Component?, Designing Class-Based Components, Conducting Component-Level Design, Designing Conventional Components.

PERFORMING USER INTERFACE DESIGN: The Golden Rules, User Interface Analysis and Design, Interface Analysis, Interface Design Steps, Design Evaluation.

UNIT-4 15 Periods

SOFTWARE PROCESS AND PROJECT METRICS: Introduction: Metrics Process and Project Domains, Software Measurement, Metrics for Software Quality, Integrating Metrics with Process.

SOFTWARE QUALITY ASSURANCE: Quality Concepts, Quality Movement, SQA, Software Reviews, Formal Technical Reviews, Formal Approaches to SQA, Software Reliability, ISO 9000 Quality Standards, SQA Plan.

SOFTWARE TESTING STRATEGIES: Strategic Approach, Strategic Issues, Test strategies for Conventional Software, Test strategies for Object Oriented Software, Validation Testing, System Testing, The Art of Debugging. White box testing. Black box testing.

Protocol Architecture: The Need for a Protocol Architecture, A Simple Protocol

Architecture, OSI, The TCP/IP Protocol Architecture.

Digital Data Communication Techniques: Asynchronous & Synchronous Transmission, Types of Errors, Error Detection, Error Correction.

> UNIT-2 16 Hours

DATA Link Control: Flow Control, Error Control.

Network Layer: Network Layer Design Issues: Store-and-Forward Packet Switching, Services Provided to the Transport Layer, Implementation of Connectionless Service,

(Autonomous)

DEPARTMENT OF COMPUTER SCIENCE AND ENGINEERING

Implementation of Connection-Oriented Service, Comparison of Virtual-Circuit & Datagram Subnets.

Routing Algorithms: The Optimality Principle, Shortest Path Routing, Flooding, Distance Vector Routing, Link State Routing, Hierarchical Routing.

Congestion Control Algorithms: General Principles of Congestion Control, Congestion Prevention Policies, Congestion Control in Virtual-Circuit Subnets, Congestion Control in Datagram Subnets, Load Shedding, Jitter Control.

UNIT-3 16 Hours

Quality of Service: Requirements, Techniques for Achieving Good Quality of Service The Network Layer in the Internet: The IP Protocol, IP Addresses, Internet Control Protocols. The **Transport Layer, The Transport Service:** Services Provided to the Upper Layers, Transport Service Primitives, Berkeley sockets

Elements of Transport Protocols: Addressing, Connection Establishment, Connection Release, Flow Control and Buffering, Multiplexing, Crash Recovery.

UNIT-4 14 Hours

The Internet Transport Protocol (UDP): Introduction to UDP, Remote Procedure Call, The Real-Time Transport Protocol.

The Internet Transport Protocols (TCP): Introduction to TCP, The TCP Service Model, The TCP Protocol, The TCP Segment Header, TCP Connection Establishment, TCP Connection Release, Modeling TCP Connection Management, TCP Transmission Policy, TCP Congestion Control, TCP Timer Management.

Application Layer: The Domain Name System (DNS): The DNS Name Space, Resource Records, Name Servers.

Introduction to AI: What is AI?, Foundations of AI, History of AI, State of the Art. Intelligent Agents: Agents and Environments, Good Behavior: Concept of Rationality, The Nature of Environments And The Structure of Agents. Solving Problems by Searching: Problem Solving Agents, Searching for Solutions, Uninformed Search Strategies: Breadth First Search, Uniform Cost Search, Depth First Search, Iterative Deepening DFS and Bi-directional Search. Informed (Heuristics) Search Strategies: Greedy BFS, A* Algorithm, AND-OR Search trees, Constraint Satisfaction Problems: Defining Constraint Satisfaction Problems, Local Search in CSP.

UNIT-2 14 Hours

Logical Agents: Knowledge Based Agents, The Wumpus World, Logic and Propositional Logic, Propositional Theorem Proving: Inference and proofs, Proof by resolution, Horn clauses and definite clauses, Forward and Backward chaining. First Order Logic: Representation, Revisited Syntax and Semantics of First Order Logic, Using First Order Logic, Knowledge Engineering in First Order Logic. Inferences in First Order Logic: Propositional vs. First Order Inference, Unification and Lifting, Forward Chaining, Backward Chaining, Resolution.

UNIT-3 14 Hours

(Autonomous)
