Academic Rules & Regulations (R20 Regulations)

Regulations for Four Year Bachelor of Technology (B.Tech)

Degree Program for the Batches admitted from the academic year 2020-21

(Academic Regulations as amended in November 2021)

1. Award of B.Tech. Degree

A student will be declared eligible for the award of the B.Tech. degree if he/she fulfils the following academic regulations:

- i. Pursues a course of study for not less than four academic years and in not more than eight academic years. However, for the students availing Gap year facility, this period shall be extended by two years at the most and these two years would not be counted in the maximum time permitted for graduation. A lateral entry student pursues a course of study for not less than three academic years and in not more than six academic years.
- **ii.** Registers for 160 credits and secures all 160 credits. However, a lateral entry student registers for 121 credits and secures all the 121 credits from III semester to VIII semester of Regular B. Tech. program.
- iii. The student will be eligible to get Under graduate degree with Honors or additional minor engineering if he/she completes an additional 20 credits.
- iv. A student will be permitted to register either for Honors degree or additional minor engineering but not both.
- 2. Students, who fail to fulfil all the academic requirements for the award of the degree within eight academic years from the year of their admission, shall forfeit their seat in B.Tech. course and their admission stands cancelled. A lateral entry student should complete the course within six academic years from the year of their admission, failing which his/her admission in B.Tech course stands cancelled.

3. Courses of study

The following courses of study are offered at present as specializations for the B. Tech. course.

S.No.	Title of the UG Programme	Abbreviation
1.	Civil Engineering	CE
2.	Computer Science & Engineering	CS
3.	Electrical & Electronics Engineering	EE
4.	Electronics & Communication Engineering	EC
5.	Electronics & Instrumentation Engineering	EI
6.	Information Technology	IT

(Autonomous)

DEPARTMENT OF COMPUTER SCIENCE AND ENGINEERING

7.	Mechanical Engineering	ME
8.	Cyber Security	CS
9.	Data Science	DS
10.	CSE (Artificial Intelligence & Machine Learning	CM

4. Credits:

- i. *Credit:* A unit by which the course work is measured. It determines the number of hours of instructions required per week. One credit is equivalent to one hour of teaching (Lecture) or two hours of practical work/field work per week.
- ii. Academic Year: Two consecutive (one odd + one even) semesters constitute one academic year.
- iii. Choice Based Credit System (CBCS): The CBCS provides choice for students to select from the prescribed courses.
- iv. Each course in a semester is assigned certain number of credits based on following:

Description	Hours/Week	Credits
Theory	03	03
Tutorial	01	01
Practical	03	1.5
Internship (At the end of IV & VI evaluated in V & VII resp.)	-	1.5/3.0
Project Work	24	12

(Autonomous)

DEPARTMENT OF COMPUTER SCIENCE AND ENGINEERING

5. Course Structure

Every course of the B.Tech program will be placed in one of the 8 categories with suggested credits as listed below.

S.No.	Category	Category Description	Abbreviated Category	Credits
1	Humanities and social science	Humanities and social science including Management courses	HS	10.5
2	Basic Sciences	Basic Science courses	BS	21
3	Engineering Science courses	Engineering Science Courses including workshop, drawing, basics of electrical / mechanical / computer etc.	ES	24
4	Professional core	Professional core Courses	PC	51
5	Job Oriented /Open Electives	Emerging and job oriented/ Open Elective Courses- from other technical	JO/OE	12
6	Professional Courses	Professional Elective Courses relevant to chosen specialization/ branch	PE	18
7	Project Work & Internship	rk & Project Work, Seminar, Internship in industry elsewhere		16.5
8	Mandatory courses	Environmental Studies, Induction training, Universal human Values, Ethics, Indian Constitution, Essence of Indian Traditional Knowledge (Non- Credit)	МС	0
9	Skill Oriented Courses	Skill Oriented Courses relevant to domain, interdisciplinary, communication skill, industry	SO	10
	Total		160	

6. Weightage for Course Evaluation

6.1 Course Pattern

- 1. The entire course of study is for four academic years. Semester pattern shall be followed in all years.
- ^{2.} A student eligible to appear for the end examination in a subject, but absent or has failed in the end examination may appear for that subject at the next supplementary examination when offered.
- 3. When a student is detained due to lack of credits/shortage of attendance he/she may be re-admitted when the semester is offered after fulfilment of academic regulations. In such case, he/she shall be in the academic regulations into which he/she is readmitted.

(Autonomous)

DEPARTMENT OF COMPUTER SCIENCE AND ENGINEERING

6.2 Evaluation Process

The performance of the students in each semester shall be assessed course wise. All assessments will be done on absolute mark basis. However, for the purpose of reporting the performance of a candidate, letter grades and grade points will be awarded.

The performance of a student in each course is assessed with alternate assessment methods, term examinations on a continuous basis during the semester called Continuous Internal Evaluation (CIE) and a Semester End Examination (SEE) conducted at the end of the semester. For each theory, design and/or drawing course, there shall be a comprehensive Semester End Examination (SEE) of three hours duration at the end of each Semester, except where stated otherwise in the detailed Scheme of Instruction.

The performance of a student in each semester shall be evaluated subject wise with a maximum of 100 marks for theory and 100 marks for practical subject. In addition, Internships carried out after IV Semester & VI Semester shall be evaluated for 100 marks each and the Internship along with Project Work carried out in VIII Semester shall be evaluated for 100 marks. For theory subjects, the distribution shall be 30 marks for Internal Evaluation and 70 marks for the End-Examination. For project work, the distribution shall be 30 marks for Internal Evaluation and 70 marks for the End-Examination. For project work, the distribution shall be 30 marks for Internal Evaluation and 70 marks for the End-Examination / Viva-Voce. The distribution of marks between Continuous Internal Evaluation (CIE) and Semester End Examination (SEE) to be conducted at the end of the semester will be as follows:

Nature of the Course	CIE	SEE
Theory subjects	30	70
Practical	30	70
Summer / Industrial / Research Internship	-	100
Project Work	30	70

6.3 Continuous Internal Evaluation (CIE) in Theory subjects:

6.3.1 In each Semester there shall be two Term examinations and some *Alternate Assessment Tools (AAT)* like Home Assignment, Class Test, Problem Solving, Group Discussion, Quiz, Seminar and Field Study in every theory course. The Alternate Assessment Tools with detailed modality of evaluation for each course shall be finalized by the teacher concerned before beginning of the course. It will be reviewed and approved by the Department Committee.

The Term Examination is conducted in the regular mode according to a schedule which will be common for a particular year of study. The maximum weightage for Term Examinations, AATs and the calculation of marks for CIE in a theory course is given in the following Table.

(Autonomous)

DEPARTMENT OF COMPUTER SCIENCE AND ENGINEERING

Doutionlong	Term Exams		AAT
Particulars	(Max. 20 marks)		(Max. 10 marks)
Better Performed	75% of	marks	Continuous assessment by teacher as per the
exam	obtained		predetermined course delivery & assessment plan.
	25% of marks obtained		(Minimum two & maximum four assessments).
Other exam			AAT marks shall be considered based on average
			of all tests conducted.

A minimum of 15 (50%) marks are to be secured exclusively in the Continuous Internal Evaluation (CIE) in order to be declared as qualified in that course and eligible to write the Semester End Examination (SEE) of that course. If a student fails to obtain 15 marks in CIE, he can register for the course repetition as per the guidelines mentioned in 6.5.

Make up Test:

- a) A student can appear for a Make-up Test for **maximum two theory subjects** of a semester to improve marks in the Continuous Internal Evaluation (CIE).
- b) A student is eligible for **Make-up test** which is conducted after the second Mid Term examination and before SEE examination if he/she satisfies the following conditions.
 - i) Unable to secure 50% internal marks (CIE) and has more than or equal to 50% attendance in a particular theory subject (After finalizing the internal marks).
 - ii) Attendance in Remedial classes is more than or equal to 65% (if Remedial classes are conducted) or greater than 50% marks in the I Mid Term Examination and AAT 1 together.
 - iii)Attended 50% of CIE tests (at least one AAT & one Mid Term Examinations).
- c) The make-up test will be conducted for 30 marks (6 X 1M, 2X 12M) in Mid Examination format covering the entire syllabus and the marks obtained in this test are final. However, the maximum marks awarded will be 15 only.

6.3.2 Semester End Examination (SEE) in Theory and Design Course:

- a) For each theory, design and/or drawing course, there shall be a comprehensive Semester End Examination (SEE) of three hours duration at the end of each Semester for 70 marks, except where stated otherwise in the detailed Scheme of Instruction. Question paper setting shall be set by the teacher or teachers together in a multi section courses and to be verified as described in policy document.
- b) A minimum of 25 marks are to be secured exclusively in the Semester End Examination (SEE) of theory, design and/or drawing course. However a minimum 40 marks are to be secured in CIE & SEE together for the award of the grade and securing the credits in that course.

6.3.3 Continuous Internal Evaluation (CIE) in laboratory courses:

The evaluation for Laboratory course is based on CIE and SEE. The CIE for 30 marks comprises of 15 marks for day to day laboratory work, 5 marks for record submission and 10 marks for a laboratory examination at the end of the semester. In any semester, a minimum of 90% of prescribed number of experiments / exercises specified in the

(Autonomous)

DEPARTMENT OF COMPUTER SCIENCE AND ENGINEERING

syllabi for laboratory course shall be taken up by the students. They shall complete these experiments / exercises in all respects and get the record certified by the internal lab teacher concerned and the Head of the Department concerned to be eligible to appear for the Final Examination in that laboratory course.

A minimum of 15 (50%) marks are to be secured exclusively in the Continuous Internal Evaluation (CIE) in order to be declared as qualified in that lab course and eligible to write the SEE of that lab course. If a student fails to obtain 15 marks in CIE, he can register for the course repetition as per the guidelines mentioned in 6.5.

6.3.4 Semester End Examination (SEE) in laboratory courses:

- a) For each laboratory course, the Semester End Examination (SEE) shall be conducted by one internal and one external examiner appointed by the Principal and the duration of the exam shall be for three hours. The SEE is for 70 marks which include 15 marks for write up, 35 marks for lab experiment/exercise, 15 marks for Viva-voce and 5 marks for general impression.
- b) A minimum of 25 marks are to be secured exclusively in the Semester End Examination (SEE) of laboratory course. However a minimum 40 marks are to be secured in CIE & SEE together for the award of the grade and securing the credits in that course.

6.3.5 Evaluation of Summer Internship and Industrial/Research Internship:

- a) Summer Internship at the end of IV semester and Industrial/Research Internship at the end of VI carried out in industry are to be evaluated in V & VII semesters respectively based report and certificate provided by the industry. The report and certificate will be evaluated by the department committee for 100 marks. 50 marks shall be for the report and certificate and 50 marks based on seminars/presentation to the department committee by the student.
- b) A minimum of 40 (40%) marks are to be secured exclusively to be declared as passed and securing the credits in the internships.

6.3.6 Evaluation of the Project

- a) The evaluation shall be based on CIE and SEE. The CIE is for 30 marks which consists of reviews at the end of each month as per the Process Document in the form of seminars/presentations for 15 marks and the project report submitted at the end of the semester which is evaluated for 15 marks. A minimum of 15 (50%) marks and 50% attendance are to be secured by the student exclusively in CIE in order to be declared as qualified in the project work and eligible to write the SEE in the project work.
- b) SEE shall be evaluated in the form of a Viva-Voce and demonstration of the thesis work for 70 marks. Viva-voce Examination in project work shall be conducted by one internal examiner (Member of PWC) and one external examiner to be appointed by the principal. A minimum of 25 marks shall be obtained exclusively in SEE in order to be declared as passed in the Project work.
- c) Completion of internships along with Project work in VIII Semester is mandatory, if any student fails to complete internship, he/she will not be eligible for the award of degree. In such cases, the student has to repeat and complete the internship.

(Autonomous)

DEPARTMENT OF COMPUTER SCIENCE AND ENGINEERING

6.4 There shall be mandatory courses with zero credits. There shall be no external examination. However, attendance in the mandatory course shall be considered while calculating aggregate attendance and student shall be declared to have passed the mandatory course only when he/she secures 50% or more in the internal examinations. In case, the student fails, a re-examination shall be conducted for failed candidates every six months/semester at a mutually convenient date of college/student satisfying the conditions mentioned in item 1 & 2 of the regulations.

6.5 Course Repetition (Repeater course)

The students not qualified to write SEE in a course may register for the repeater courses through course repetition and summer semester. The students have to apply to the Principal through the respective HOD by paying prescribed fees.

Course repetition: A student can take up a maximum of two theory courses in a semester immediately after the semester end examinations of that particular semester in accordance with the guidelines recommended by the Academic Council. The students who are not taking regular semester courses may additionally register for one more theory course.

The documents for monitoring the candidates registered for course repetition are available with the Heads of the Departments and Exam Section.

- **6.6** There shall be five Professional Elective Courses from V Semester to VII and for each elective there shall be choices such that the student shall choose a course from the list of choice courses offered by the department for that particular elective.
- 6.7 There shall be three Job Oriented elective Courses in all programs from V to VII semester. One Open Elective course in VII semester will be offered by various departments. The student shall register for open elective in the VII semester offered by other departments in such a manner that he/she has not studied the same course in any form during the Program. The students shall be permitted to pursue up to a maximum of two elective courses (either Professional Elective Courses in clause 6.6 or Open Electives/ Job Oriented Courses in clause 6.7) under MOOCs (Massive Open Online Courses) offered by NPTEL and other reputed organizations as notified by the Department during the semester. Each of the Courses must be of minimum 8/12 weeks in duration. The student has to acquire a certificate for the concerned course from the agency during the semester only in order to earn the credits for that course. For further details and guidelines, the students can visit the college website.
- **6.8** There shall be a mandatory **induction program** for three weeks before the commencement of first semester.
- **6.9 Minor in a discipline** (Minor degree/program) concept is introduced in the curriculum for all conventional B. Tech programs in which it offers a major. The main objective of Minor in a discipline is to provide additional learning opportunities for academically motivated students and it is an optional feature of the B. Tech. program.
 - a. i) Students who are desirous of pursuing their special interest areas other than the chosen discipline of Engineering may opt for additional courses in minor specialization groups offered by a department other than their parent department. For example, If Mechanical Engineering student selects subjects from Civil Engineering under this scheme, he/she will get Major degree of Mechanical Engineering with minor degree of Civil Engineering

(Autonomous)

DEPARTMENT OF COMPUTER SCIENCE AND ENGINEERING

- ii) Student can also opt for Industry relevant tracks of any branch to obtain the Minor Degree, for example, a B.Tech Mechanical student can opt for the industry relevant tracks like Data Mining track, IOT track, Machine learning track etc.
- b. The BOS concerned shall identify as many tracks as possible in the areas of emerging technologies and industrial relevance / demand. For example, the minor tracks can be the fundamental courses in CSE, ECE, EEE, CE, ME etc or industry tracks such as Artificial Intelligence (AI), Machine Learning (ML), Data Science (DS), Robotics, Electric vehicles, Robotics, VLSI etc.
- c. The list of disciplines/branches eligible to opt for a particular industry relevant minor specialization shall be clearly mentioned by the respective BOS.
- d. There shall be no limit on the number of programs offered under Minor. The University/Institution can offer minor programs in emerging technologies based on expertise in the respective departments or can explore the possibility of collaborating with the relevant industries/agencies in offering the program.
- e. The concerned BOS shall decide on the minimum enrolments for offering Minor program by the department. If a minimum enrolments criterion is not met, then the students may be permitted to register for the equivalent MOOC courses as approved by the concerned Head of the department in consultation with BOS.
- f. A student shall be permitted to register for Minor program at the beginning of 4th semester provided that the student must have acquired a minimum of **8.0 SGPA** in each semester up to the end of 2nd semester without any backlogs. In case of the declaration of the 3rd semester results after the commencement of the 4th semester and if a student fails to score the required minimum of 8 SGPA, his/her registration for Minor Program stands cancelled and he/she shall continue with the regular Program. An SGPA of 8 has to be maintained in the subsequent semesters without any backlog in order to keep the Minor registration active
- g. A student shall earn additional 20 credits in the specified area to be eligible for the award of B. Tech degree with Minor. This is in addition to the credits essential for obtaining the Under Graduate Degree in Major Discipline (i.e. 160 credits).
- h. Out of the 20 Credits, 16 credits shall be earned by undergoing specified courses listed by the concerned BOS along with prerequisites. It is the responsibility of the student to acquire/complete prerequisite before taking the respective course. If a course comes with a lab component, that component has to be cleared separately. A student shall be permitted to choose only those courses that he/she has not studied in any form during the Program.
- i. In addition to the 16 credits, students must pursue at least 2 courses through MOOCs. The courses must be of minimum 8 weeks in duration. Attendance will not be monitored for MOOC courses. Student has to acquire a certificate from the agencies approved by the BOS with grading or marks or pass/fail in order to earn 4 credits. If the MOOC course is a pass/fail course without any grades, the grade to be assigned as decided by the university/academic council.
- j. Student can opt for the Industry relevant minor specialization as approved by the concerned departmental BOS. Student can opt the courses from Skill Development Corporation (APSSDC) or can opt the courses from an external agency recommended and approved by concerned BOS and should produce course completion certificate. The Board of studies of the concerned discipline of Engineering shall review such courses being offered by eligible external agencies and prepare a fresh list every year incorporating latest skills based on industrial demand.

(Autonomous)

DEPARTMENT OF COMPUTER SCIENCE AND ENGINEERING

- k. A committee should be formed at the level of College/Universities/department to evaluate the grades/marks given by external agencies to a student which are approved by concerned BOS. Upon completion of courses the departmental committee should convert the obtained grades/marks to the maximum marks assigned to that course. The controller of examinations can take a decision on such conversions and may give appropriate grades.
- 1. If a student drops (or terminated) from the Minor program, they cannot convert the earned credits into free or core electives; they will remain extra. These additional courses will find mention in the transcript (but not in the degree certificate). In such cases, the student may choose between the actual grade or a "pass (P)" grade and also choose to omit the mention of the course as for the following: All the courses done under the dropped Minors will be shown in the transcript. None of the courses done under the dropped Minor will be shown in the transcript.
- m. In case a student fails to meet the CGPA requirement for B. Tech degree with Minor at any point after registration, he/she will be dropped from the list of students eligible for degree with Minors and they will receive B. Tech degree only. However, such students will receive a separate grade sheet mentioning the additional courses completed by them.
- n. Minor must be completed simultaneously with a major degree program. A student cannot earn the Minor after he/she has already earned bachelor's degree.
- o. Minimum enrollment for a Minor course to be offered is 12.

6.10 Honors degree in a discipline:

Students of a Department/Discipline are eligible to opt for Honors Program offered by the same Department/Discipline.

- a. A student shall be permitted to register for Honors program at the beginning of 4th semester provided that the student must have acquired a minimum of **8.0 SGPA** in each semester up to the end of 2nd semester without any backlogs. In case of the declaration of the 3rd semester results after the commencement of the 4th semester and if a student fails to score the required minimum of 8 SGPA, his/her registration for Honors Program stands cancelled and he/she shall continue with the regular Program. An SGPA of 8 has to be maintained in the subsequent semesters without any backlog in order to keep the Honors registration active.
- b. Students can select the additional and advanced courses from their respective branch in which they are pursuing the degree and get an honors degree in the same. e.g. If a Mechanical Engineering student completes the selected advanced courses from same branch under this scheme, he/she will be awarded B.Tech. (Honors) in Mechanical Engineering.
- c. In addition to fulfilling all the requisites of a Regular B.Tech Program, a student shall earn 20 additional credits to be eligible for the award of B. Tech (Honors) degree. This is in addition to the credits essential for obtaining the Under Graduate Degree in Major Discipline (i.e. 160 credits).
- d. Of the 20 additional Credits to be acquired, 16 credits shall be earned by undergoing specified courses listed as pools, with four courses, each carrying 4 credits. The remaining 4 credits must be acquired through two MOOCs, which shall be domain specific, each with 2 credits and with a minimum duration of 8/12weeks as recommended by the Board of studies.
- e. It is the responsibility of the student to acquire/complete prerequisite before taking the

(Autonomous)

DEPARTMENT OF COMPUTER SCIENCE AND ENGINEERING

respective course. The courses offered in each pool shall be domain specific courses and advanced courses.

- f. The concerned BOS shall decide on the minimum enrolments for offering Honors program by the department. If minimum enrolments criteria are not met then the students shall be permitted to register for the equivalent MOOC courses as approved by the concerned Head of the department in consultation with BOS.
- g. Each pool can have theory as well as laboratory courses. If a course comes with a lab component, that component has to be cleared separately. The concerned BOS shall explore the possibility of introducing virtual labs for such courses with lab component. (Model pool list is enclosed in the Annexure-2).
- h. MOOC courses must be of minimum 8 weeks in duration. Attendance will not be monitored for MOOC courses. Students have to acquire a certificate from the agencies approved by the BOS with grading or marks or pass/fail in order to earn credits. If the MOOC course is a pass/fail course without any grades, the grade to be assigned will be as decided by the BOS/academic council.
- i. The concerned BOS shall also consider courses listed under professional electives of the respective B. Tech programs for the requirements of B. Tech (Honors). However, a student shall be permitted to choose only those courses that he/she has not studied in any form during the Program.
- j. If a student drops or is terminated from the Honors program, the additional credits so far earned cannot be converted into free or core electives; they will remain extra. These additional courses will find mention in the transcript (but not in the degree certificate). In such cases, the student may choose between the actual grade or a "pass (P)" grade and also choose to omit the mention of the course as for the following: All the courses done under the dropped Minors will be shown in the transcript. None of the courses done under the dropped Minor will be shown in the transcript.
- k. In case a student fails to meet the CGPA requirement for Degree with Honors at any point after registration, he/she will be dropped from the list of students eligible for Degree with Honors and they will receive regular B.Tech degree only. However, such students will receive a separate grade sheet mentioning the additional courses completed by them.
- l. Honors must be completed simultaneously with a major degree program. A student cannot earn Honors after he/she has already earned bachelor's degree.
- **6.11** National Service Scheme (NSS)/Yoga is compulsory for all the Undergraduate students. The student participation shall be for a minimum period of 45 hours during the first year. Grades will be awarded as Very Good, Good, Satisfactory in the mark sheet on the basis of participation, attendance, performance and behaviour. If a student gets Un-satisfactory grade, he/she has to repeat the above activity in the subsequent years along with the next year students.
- 6.12 Students shall undergo two summer internships each for a minimum of six weeks duration at the end of second and third years of the program for 1.5 credits & 3 credits respectively. The organization in which the student wishes to carry out Internship need to be approved by Internal Department Committee comprising Head of Department and two senior faculty members. The student shall submit a detailed technical report along with internship certificate from the Internship organization in order to obtain the prescribed credits. The student shall submit the Internship Report along with Certificate of Internship. The evaluation of the first and second summer internships shall be conducted at the end of the V Semester & VII semester respectively.

(Autonomous)

DEPARTMENT OF COMPUTER SCIENCE AND ENGINEERING

There shall be internal evaluation for 100 marks and there shall not be external evaluation. The Internal Evaluation shall be made by the departmental committee (Head of the Department and two senior faculty of the department) on the basis of the internship report submitted by the student.

Completion of the internship is mandatory, if any student fails to complete internship, he/she will not be eligible for the award of degree. In such a case, the student shall repeat the internship in the subsequent summer provided that the student doesn't pursue two summer internships in the same summer.

Community Service Project focussing on specific local issues shall be an alternative to the six weeks of summer Internship, whenever there is any emergency and when students cannot pursue their summer internships. The Community Service Project shall be for 6 weeks in duration which includes preliminary survey for 1 week, community awareness programs for one week, community immersion program in consonance with Government agencies for 3 weeks and a community exit report (a detailed report) for one week. The community service project shall be evaluated for 100 marks by the internal departmental committee comprising Head of the Department and two senior faculty of the department. However, the first priority shall be given to the internship.

- 6.13 There shall also be a mandatory full internship in the final semester (VIII Semester) of the Program along with the project work. The organization in which the student wishes to carry out the Internship need to be approved by Internal Department Committee comprising Head of the Department and two senior faculty. The faculty of the respective department monitors the student internship program along with project work. At the end of the semester, the candidate shall submit a certificate of internship and a project report. The project report and presentation shall be internally evaluated for 30 marks by the departmental project work committee. The Viva-Voce shall be conducted for 70 marks by a Project work committee and an External Examiner.
 - Completion of internship is mandatory, if any student fails to complete internship, he/she will not be eligible for the award of degree. In such a case, the student shall repeat the internship along with project work for next six months.
- 6.14 There shall be five skill-oriented courses offered during III semester to VII semester. Out of the five skill courses, two shall be skill-oriented programs related to the domain and these two shall be completed in second year. Of the remaining three skill courses, one shall necessarily be a soft skill course and the remaining 2 shall be skill-advanced courses either from the same domain or Job oriented skill courses, which can be of inter disciplinary nature.

The student can choose between a skill advanced course being offered by the college or to choose a certificate course being offered by industries/Professional bodies/APSSDC or any other accredited bodies which are duly approved by the Internal Department Committee. The credits assigned to the skill advanced course shall be awarded to the student upon producing the Course Completion Certificate from the agencies / professional bodies.

The Internal Department Committee comprising Head of Department and two senior faculty shall evaluate the grades / marks awarded for a course by external agencies and convert to the equivalent marks / grades.

7. Attendance Requirements:

* A student shall be eligible to appear for semester end examinations (SEE), if he/she acquires a minimum of 75% of attendance in aggregate of all the subjects in a semester.

(Autonomous)

DEPARTMENT OF COMPUTER SCIENCE AND ENGINEERING

- * Condonation of shortage of attendance in aggregate up to 10% (65% and above and below 75%) in each semester may be granted on medical ground duly approved by the Principal.
- Shortage of Attendance below 65% in aggregate shall in NO case be condoned.
- Further the student must obtain a minimum of 50% attendance in each subject failing which; the student shall not be permitted to write the SEE of that subject. Student has to register this subject through course repetition and satisfy the CIE qualification criteria of attendance and marks in the subsequent semesters.
- * Students whose shortage of attendance is not condoned in any semester are not eligible to take their end examination of that class and their registration shall stand cancelled.
- A student will not be promoted to the next semester unless he satisfies the attendance requirements of the present semester. They may seek readmission for that semester when offered next.
- A stipulated fee shall be payable towards condonation of shortage of attendance to the college.

8. Minimum Academic Requirements:

The following academic requirements have to be satisfied in addition to the attendance requirements mentioned in item no.7.

- 8.1 A student shall be deemed to have satisfied the minimum academic requirements and earned the credits allotted to each theory, practical, design, drawing subject or project, if he/she secures not less than 15 marks in CIE and 25 marks in SEE. In case of, internships, project work viva voce, he/she should secure 40% of the total marks. For mandatory courses minimum 15 marks in CIE are to be secured.
- 8.2 B.Tech students: A student shall be promoted from II to III year only if he/she fulfils the academic requirement of securing 40% of the credits in the subjects that have been studied up to III Semester from the following examinations.
 - One regular and two supplementary examinations of I Semester.
 - One regular and one supplementary examination of II Semester.
 - One regular examination of III semester.

Lateral Entry students: A student shall be promoted from II to III year only if he/she fulfils the academic requirement of securing 40% of the credits in the subjects that have been studied up to III Semester from the following examinations.

- One regular examination of III semester.
- 8.3 B.Tech students: A student shall be promoted from III year to IV year only if he/she fulfils the academic requirements of securing 40% of the credits in the subjects that have been studied up to V semester from the following examinations, irrespective of whether the candidate takes the end examination or not as per the normal course of study.
 - ✓ One regular and four supplementary examinations of I Semester.
 - ✓ One regular and three supplementary examinations of II Semester.
 - ✓ One regular and two supplementary examinations of III Semester.

(Autonomous)

DEPARTMENT OF COMPUTER SCIENCE AND ENGINEERING

- ✓ One regular and one supplementary examinations of IV Semester.
- ✓ One regular examination of V Semester.

Lateral entry students: A student shall be promoted from III year to IV year only if he/she fulfils the academic requirements of securing 40% of the credits in the subjects that have been studied up to V semester from the following examinations, irrespective of whether the candidate takes the end examination or not as per the normal course of study.

- ✓ One regular and two supplementary examinations of III Semester.
- ✓ One regular and one supplementary examinations of IV Semester.
- ✓ One regular examination of V Semester.

If a student is detained for want of credits for particular academic year by sections 8.2 and 8.3 above, the student may make up the credits through supplementary examinations and only after securing the required credits he/she shall be permitted to join in the V Semester or VII Semester as the case may be.

- 8.4 A student shall register and put up minimum attendance in all 160 credits and earn all the 160 credits. Marks obtained in all 160 credits shall be considered for the calculation of aggregate percentage of marks obtained. In case of lateral entry students, the number of credits is 121.
- 8.4.1 Students who fail to earn 160 credits as indicated in the course structure within eight academic years from the year of their admission shall forfeit their seat in B.Tech. course and their admission shall stand cancelled.
 - Lateral entry students who fail to earn 121 credits as indicated in the course structure within six academic years from the year of their admission shall forfeit their seat in B.Tech. course and their admission shall stand cancelled.

9. Course Pattern:

(i) A student eligible to appear for the end examination in a subject, but absent or has failed in the end examination may appear for that subject at the next supplementary examination when offered.

When a student is detained due to lack of credits/shortage of attendance he/she may be re-admitted when the semester is offered after fulfilment of academic regulations. In such case, he/she shall be in the academic regulations into which he/she is readmitted.

(ii) With-holding of Results

If any case of indiscipline or malpractice is pending against candidate, the result of the candidate shall be with held and he/she will not be allowed/promoted into the next higher semester. The issue of awarding degree is liable to be withheld in such cases.

(iii) Grading

After each subject is evaluated for 100 marks, the marks obtained in each subject will be converted to a corresponding letter grade as given below, depending on the range in which the marks obtained by the student fall.

(Autonomous)

DEPARTMENT OF COMPUTER SCIENCE AND ENGINEERING

Table – Conversion into Grades and Grade Points assigned

Range in which the marks in the subject fall		Grade	Grade Points Assigned
≥ 90	S	(Superior)	10
80-89	A	(Excellent)	9
70-79	В	(Very Good)	8
60-69	С	(Good)	7
50-59	D	(Average)	6
40-49	Е	(Below Average)	5
< 40	F	(Fail)	0
Absent	Ab	(Absent)	0

A student obtaining Grade F shall be considered failed and will be required to reappear for that subject when the next supplementary examination offered. Same is the case with a student who obtains 'Ab' in end examination.

For **mandatory** courses "Satisfactory" or "Unsatisfactory" shall be indicated instead of the letter grade and this will not be counted for the computation of SGPA/CGPA.

10. Semester Grade Point Average (SGPA) and Cumulative Grade Point Average (CGPA)

(i) The Semester Grade Point Average (SGPA) is the ratio of sum of the product of the number of credits with the grade points scored by a student in all the courses taken by a student and the sum of the number of credits of all the courses undergone by a student, i.e.,

$$SGPA = \frac{\sum_{i=1}^{n} C_i \times GP_i}{\sum_{i=1}^{n} C_i}$$

where, C_i is the number of credits of the ith subject and GP_i is the grade point scored by the student in the ith course.

(ii) The Cumulative Grade Point Average (CGPA) will be computed in the same manner taking into account all the courses undergone by a student over all the semesters of a program, i.e.,

$$CGPA = \frac{\sum_{j=1}^{m} SGPA_{j} \times TC_{j}}{\sum_{j=1}^{m} TC_{j}}$$

(Autonomous)

DEPARTMENT OF COMPUTER SCIENCE AND ENGINEERING

where "SGPA $_{j}$ " is the SGPA of the j^{th} semester and TC_{j} is the total number of credits in that semester.

- (iii) Both SGPA and CGPA shall be rounded off to 2 decimal points and reported in the transcripts.
- (iv) While computing the SGPA, the subjects in which the student is awarded Zero grade points will also be included.
- (v) Grade Point: It is a numerical weight allotted to each letter grade on a 10-point scale.
- (vi) Letter Grade: It is an index of the performance of students in a said course. Grades are denoted by letters S, A, B, C, D, E and F.

11. Award of Class

After a student has satisfied the requirements prescribed for the completion of the program and is eligible for the award of B. Tech. degree, he/she shall be placed in one of the following four classes.

Class Awarded	CGPA Secured
First Class with Distinction	≥ 7.5
First Class	\geq 6.5 < 7.5
Second Class	≥ 5.5 < 6.5
Pass Class	≥ 5.0 < 5.5

12. Gap Year

Gap year concept of Student Entrepreneur in Residence shall be introduced and outstanding students who wish to pursue entrepreneurship are allowed to take a break of one year at any time after II year to pursue entrepreneurship full time. This period may be extended to two years at the most and these two years would not be counted for the time for the maximum time for graduation. An evaluation committee shall be constituted by the College to evaluate the proposal submitted by the student and the committee shall decide whether or not to permit the student(s) to avail the Gap Year.

13. Transitory Regulations

Discontinued, detained, or failed candidates are eligible for readmission as and when the semester is offered after fulfilment of academic regulations. Candidates who have been detained for want of attendance or not fulfilled academic requirements or who have failed after having undergone the course in earlier regulations or have discontinued and wish to continue the course are eligible for admission into the unfinished semester from the date of commencement of class work with the same or equivalent subjects as and when subjects are offered, and they will be in the academic regulations into which they get readmitted.

Candidates who were permitted with Gap Year shall be eligible for rejoining into the succeeding year of their B.Tech from the date of commencement of class work, and they will be in the academic regulations into which the candidate is presently re-joining.

14. Minimum Instruction Days

The minimum instruction days including exams for each semester shall be 90 days.

15. Medium of Instruction

Sometime 1

BAPATLA ENGINEERING COLLEGE:: BAPATLA

(Autonomous)

DEPARTMENT OF COMPUTER SCIENCE AND ENGINEERING

The Medium of Instruction is **English** for all courses, laboratories, internal and external examinations and project reports.

16. Rules of Discipline

- (i) Use of mobile phones with camera, in the campus is strictly prohibited.
- (ii) Students shall behave and conduct themselves in a dignified and courteous manner in the campus/Hostels.
- (iii) Students shall not bring outsiders to the institution or hostels.
- (iv) Students shall not steal, deface, damage or cause any loss to the institution property.
- (v) Students shall not collect money either by request or coercion from others within the campus or hostels.
- (vi) Students shall not resort to plagiarism of any nature/extent. Use of material, ideas, figures, code or data without appropriate acknowledgement or permission of the original source shall be treated as cases of plagiarism. Submission of material, verbatim or paraphrased, that is authored by another person or published earlier by oneself shall also be considered as cases of plagiarism.
- (vii) Use of vehicles by the students inside the campus is prohibited.
- (viii) Any conduct which leads to lowering of the esteem of the organization is prohibited.
- (ix) Any material to be uploaded to social media sites need to be approved by Head of the Department concerned/Dean/Principal.
- (x) Any student exhibiting prohibited behaviour shall be suspended from the institute. The period of suspension and punishment shall be clearly communicated to the student. The student shall lose the attendance for the suspended period.
- (xi) Dress Code

Boys: All the boy students should wear formal dresses. Wearing T-shirts and other informal dresses in the campus is strictly prohibited.

Girls: All the girls students shall wear saree / chudidhar with dupatta.

17. Punishments for Malpractice cases – Guidelines

The examinations committee may take the following guidelines into consideration while dealing with the suspected cases of malpractice reported by the invigilators/squad members etc; during end examinations. The punishment may be more severe or less severe depending on the merits of the individual cases.

S.No.	Nature of Malpractice/Improper conduct	Punishment
1	Possesses or keeps accessible in examination hall, any paper, note book, programmable calculators, Cellphones, pager, palm computers or any other form of material concerned with or related to the course of the examination (theory or practical) in which he is appearing but has not made use of (material shall include any marks on the body of the student which can be used as an aid in the course of the examination).	Expulsion from the examination hall and cancellation of the performance in that course only.

(Autonomous) DEPARTMENT OF COMPUTER SCIENCE AND ENGINEERING

2	Uses objectionable, abusive or offensive language in the answer paper or in letters to the examiners or writes to the examiner requesting him to award pass marks.	Cancellation of the performance in that course.
3	Copying detected on the basis of internal evidence, such as, during valuation or during special scrutiny.	Cancellation of the performance in that course and all other courses the candidate has appeared including practical examinations and project work of that semester/year examinations.
4	Gives assistance or guidance or receives it from any other student orally or by any other body language methods or communicates through cell phones with any other student or persons in or outside the exam hall in respect of any matter.	Expulsion from the examination hall and cancellation of the performance in that course only of all the students involved. In case of an outsider, he will be handed over to the police and a case shall be registered against him.
5	Has copied in the examination hall from any paper, book, programmable calculators, palm computers or any other form of material relevant to the course of the examination (theory or practical) in which the student is appearing.	Expulsion from the examination hall and cancellation of the performance in that course and all other courses including practical examinations and project work of that semester/year.
6	Comes in a drunken condition to the examination hall.	Expulsion from the examination hall and cancellation of the performance in that course and all other courses including practical examinations and project work of that semester/year.
7	Smuggles in the Answer book or takes out or arranges to send out the question paper during the examination or answer book during or after the examination	Expulsion from the examination hall and cancellation of performance in that course and all the other courses including practical examinations and project work of that semester/year. The student is also debarred for two consecutive semesters from class work and all examinations. The continuation of the course by the student is subject to the academic regulations in connection with forfeit of seat.
8	Refuses to obey the orders of the Chief Superintendent / any officer on duty or misbehaves or creates disturbance of any kind in and around the examination hall or organizes a walk out or instigates others to walk out, or threatens the officer-in charge or any person on duty in or outside the examination hall of any injury to his	In case of students of the college, they shall be expelled from examination halls and cancellation of their performance in that course and all other courses of that semester/year. The students also are debarred and forfeit their seats. In case of outsiders, they will be handed over to the police and a police case shall be registered against them.

(Autonomous) DEPARTMENT OF COMPUTER SCIENCE AND ENGINEERING

	person or to any of his relations whether by words, either spoken or written or by signs or by visible representation, assaults the officer-in-charge, or any person on duty in or outside the examination hall or any of his relations, or indulges in any other act of misconduct or mischief which result in damage to or destruction of property in the examination hall or any part of the College campus or engages in any other act which in the opinion of the officer on duty amounts to use of unfair	
	means or misconduct or has the tendency to disrupt the orderly conduct of the examination.	
9	Leaves the exam hall taking away answer script or intentionally tears up the script or any part there of inside or outside the examination hall.	Expulsion from the examination hall and cancellation of performance in that course and all the other courses including practical examinations and project work of that semester/year. The candidate is also debarred for two consecutive semesters from classwork and all end examinations. The continuation of the course by the candidate is subject to the academic regulations in connection with forfeiture of seat.
10	Possesses any lethal weapon or firearm in the examination hall.	Expulsion from the examination hall and cancellation of the performance in that course and all other courses including practical examinations and project work of that semester/year. The student is also debarred and forfeits the seat.
11	If student of the college, who is not a candidate for the particular examination or any person not connected with the college indulges in any malpractice or improper conduct mentioned in S.No7 to S.No 9.	For Student of the college: Expulsion from the examination hall and cancellation of the performance in that course and all other courses including practical examinations and project work of that semester/year. The candidate is also debarred and forfeits the seat. Person(s) who do not belong to the College will be handed over to police and, a police case shall be registered against them.
12	Impersonates any other student in connection with the examination	The student who has impersonated shall be expelled from examination hall. The student is debarred from writing the remaining exams, and rusticated from the college for one academic year during which period the student will not be permitted to write any exam. If the

DEPARTMENT OF COMPUTER SCIENCE AND ENGINEERING

Discipline and Code of Conduct for Students

The following are some of the important rules of discipline. All students are required to be aware of and act consistently with these values.

- 1. Students must punctually attend all lectures, practicals, tutorials, assignments, tests, examinations, etc. A student whose attendance and/or progress in the various tests and examinations are not satisfactory and who does not perform the required number of assignments, tutorials and/or practicals are likely to lose their terms. Prolonged absence even on ground of ill health may also lead to loss of terms. Defaulters will not be sent up for Final /University Examinations.
- 2. The identity card is meant for identifying bonafide students and is used for permitting the students to participate in various activities and programs of the college. Every student must wear Identity card as long as he/she is in the college campus. It must be produced by the student whenever demanded by the member of the teaching or non-teaching staff of the college. Every student must wear his/her Identity card in the college every day. He/She must take proper care of it to avoid its misuse by other students and outsiders. In case the Identity card is lost, the matter should be immediately reported to the Principal and an application should be made for a duplicate Identity card, which will be issued on payment of charges.
- 3. The conduct of the students in the classes and in the premises of the college shall be such as will cause no disturbance to teachers, fellow students or other classes.
- 4. Every student shall wear a clean formal dress while coming to the college also when representing the college for various activities out station.
- 5. No Society or Association shall be formed in the College and no person should be invited in the college campus without the specific permission of the Principal.
- 6. No student is allowed to display any Notice/Circular/Poster/Banner in the College premises without the prior permission of the Principal.
- 7. Using foul language in the college campus is prohibited. If any student is caught using foul language, disciplinary action shall be initiated against the student.
- 8. Use of **BEC name tag or logo** by the students for their caste, political, religious, personal reasons is prohibited. Further placing banners on caste, political, religious, personal reasons, promoting cinema heroes & political leaders, taking possessions and burning fire crackersin front of the collegeis strictly prohibited. If any student is involved in such activities in and around the campus, severe disciplinary action will be taken including rusticating from the college and filing a criminal case.
- 9. Outsiders are not permitted in the college premises without the prior permission of the Principal. College students are not allowed to bring their relatives/friends to the college premises without the permission of the principal.

Superior States

BAPATLA ENGINEERING COLLEGE:: BAPATLA

(Autonomous)

DEPARTMENT OF COMPUTER SCIENCE AND ENGINEERING

- 10. All meetings, cultural programs, debates, elocutions etc. organized on the college premises must be held in presence of teaching staff members and with the prior permission of the Principal. The subjects of debates/elocutions must have the prior approval of the principal.
- 11. Conducting fresher's meet, farewell meets etc. by the students outside the campus are prohibited. If any student is involved in such activities (organizing as well as participating), severe disciplinary action will be taken including rusticating from the college.
- 12. Students must take proper care of the college property. Strict action will be taken against students damaging College property and will be required to compensate the damage.
- 13. Students should not be involved in academic offences including cheating or plagiarism in academic course work malpractices at the College/Board/University Examinations
- 14. Smoking is strictly prohibited in the college premises.
- 15. If, for any reason, the continuance of a student in the College is found detrimental to the best interest of the college, the Management may ask the student to leave the college without assigning any reasons and the decision will be final and binding on the student.
- 16. Playing music on Transistors, Tape-Recorders, Car Stereos, Mobile phones or any other similar gadgets with or without earphones is strictly prohibited in the college premises. Defaulters will be punished and their instrument shall be confiscated.
- 17. Use of Mobile phones is strictly prohibited in the academic area of the college, Defaulters will be penalized and their instrument confiscated.
- 18. Students who are travelling to college on personal vehicles (2/4 wheelers) need to have valid driving license issued by RTO and follow all the rules listed by RTO. Students have to park the vehicle in the parking area of the college.
- 19. Students must not hang around in the college premises while the classes are at work.
- 20. Students must not attend classes other than their own without the permission of the authority concerned.
- 21. Students shall do nothing inside or outside the college that will interface with the discipline of the college or tarnish the image of the college.
- 22. Students are not allowed to communicate any information about college matters to Press.
- 23. Matters not covered above will be decided at the discretion of the Principal.

Acts of misbehavior, misconduct, indiscipline or violation of the Rules of Discipline mentioned above liable for one more punishments as stated below:

- A. Warning to the students.
- B. Warning to the student as well as inform the parents.
- C. Imposition of a fine.
- D. Denial of gymkhana, library, laboratory, N.C.C., N.S.S. student aid or any other facility for a specified period or for the whole Term/Year.
- E. Expulsion from College for a specified period
- F. Cancellation of Terms.
- G. Refusal of admission in the term or academic year.
- H. Cancellation of admission.
- I. Rustication.

Anti Ragging Rules and Regulations (As per AICTE Norms)

What constitutes Ragging: - Ragging constitutes one or more of any of the following acts:

- a. any conduct by any student or students whether by words spoken or written or by an act which has the effect of teasing, treating or handling with rudeness a fresher or any other student.
- b. indulging in rowdy or undisciplined activities by any student or students which causes or is likely to cause annoyance, hardship, physical or psychological harm or to raise fear or apprehension thereof in any fresher or any other student.
- c. asking any student to do any act which such student will not in the ordinary course do and which has the effect of causing or generating a sense of shame, or torment or embarrassment so as to adversely affect the physique or psyche of such fresher or any other student.
- d. any act by a senior student that prevents, disrupts or disturbs the regular academic activity of any other student or a fresher.
- e. exploiting the services of a fresher or any other student for completing the academic tasks assigned to an individual or a group of students.
- f. any act of financial extortion or forceful expenditure burden put on a fresher or any other student by students.
- g. any act of physical abuse including all variants of it: sexual abuse, homosexual assaults, stripping, forcing obscene and lewd acts, gestures, causing bodily harm or any other danger to health or person.
- h. any act or abuse by spoken words, emails, posts, public insults which would also include deriving perverted pleasure, vicarious or sadistic thrill from actively or passively participating in the discomfiture to fresher or any other student.
- i. any act that affects the mental health and self-confidence of a fresher or any other student with or without an intent to derive a sadistic pleasure or showing off power, authority or superiority by a student over any fresher or any other student.

1. Actions to be taken against students for indulging and abetting ragging in technical institutions Universities including Deemed to be University imparting technical education:

- a) The punishment to be meted out to the persons indulged in ragging has to be exemplary and justifiably harsh to act as a deterrent against recurrence of such incidents.
- b) Every single incident of ragging a First Information Report (FIR) must be filed without exception by the institutional authorities with the local police authorities.
- c) The Anti-Ragging Committee of the institution shall take an appropriate decision, with regard to punishment or otherwise, depending on the facts of each incident of ragging and nature and gravity of the incident of ragging.
- d) Depending upon the nature and gravity of the offence as established the possible punishments for those found guilty of ragging at the institution level shall be any one or any combination of the following:-
 - (i) Cancellation of admission
 - (ii) Suspension from attending classes
 - (iii) Withholding/withdrawing scholarship/fellowship and other benefits

(Autonomous)

DEPARTMENT OF COMPUTER SCIENCE AND ENGINEERING

- (iv) Debarring from appearing in any test/examination or other evaluation process
- (v) Withholding results
- (vi) Debarring from representing the institution in any regional, national or international meet, tournament, youth festival, etc.
- (vii) Suspension/expulsion from the hostel
- (viii) Rustication from the institution for period ranging from 1 to 4 semesters
- (ix) Expulsion from the institution and consequent debarring from admission to any other institution.
- (x) Collective punishment: when the persons committing or abetting the crime of ragging are not identified, the institution shall resort to collective punishment as a deterrent to ensure community pressure on the potential raggers.

DEPARTMENT OF COMPUTER SCIENCE AND ENGINEERING

<u>Guidelines for Remedial Classes and Make-up Test (R20 Regulations)</u> The guidelines for conducting the remedial classes:

- d) Faculty need to identify the underperforming students in their respective subject. An underperforming student is one, whose marks less than 50% in the I Mid Term Examination and AAT 1 together. A list of such students should be prepared by the faculty soon after the I Mid Term examination is over and get it signed by the concerned HOD.
- e) Faculty should conduct remedial classes for the underperforming students with an objective of improving their marks in the CIE. Minimum number of remedial classes to be taken should be 20% of the classes taken prior the I Mid Term Examination which is 6 classes. Teaching methodology is left to the faculty member, but he/she should keep the objective in mind.
- f) Regular students who could not appear for the I Mid Term Examination and AAT (with genuine reason) should appear to the remedial classes with the prior permission of the HOD.
- g) The entire process of conduct of remedial classes should be well documented and is subjected to academic audit.

The guidelines for conducting the Make-up test:

- h) A student can appear for a Make-up Test for **maximum two theory subjects** of a semester to improve marks in the Continuous Internal Evaluation (CIE).
- i) A student is eligible for **Make-up test** which is conducted after the second Mid Term examination and before SEE examination if he/she satisfies the following conditions.
 - iv)Unable to secure 50% internal marks (CIE) and has more than or equal to 50% attendance in a particular theory subject (After finalizing the internal marks).
 - v) Attendance in Remedial classes is more than or equal to 65% (if Remedial classes are conducted) or greater than 50% marks in the I Mid Term Examination and AAT 1 together.
 - vi) Attended 50% of CIE tests (at least one AAT & one Mid Term Examinations).
- j) The make-up test will be conducted for 30 marks (6 X 1M, 2X 12M) in Mid Examination format covering the entire syllabus and the marks obtained in this test are final. However, the maximum marks awarded will be 15 only.
- k) The eligible students have to apply by paying a fee prescribed by the institution and submit the application along with a letter of request indicating the genuineness of his/her candidature to be eligible for the make-up test. Applications should be approved by the concerned HOD. After approval from the HOD the concerned department will conduct the make-up test and send the updated CIE marks to COE immediately.

Guidelines for Internships

As per R20 guidelines, every student has to undergo internship twice, once between IV and V semester, the other between VI and VII Semester. The first internship is for a duration of 4 weeks and the second internship is for a duration of 6 weeks.

There shall be a departmental internship committee consisting of the Head of the Department and two faculty members nominated by the HOD. The committee shall identify the potential organizations which can provide internship opportunity to the students. The department shall enter into an MOU with the concerned organization and the details will be shared with the students.

The students shall be informed to apply for undergoing internship in the specified proforma. The details and consent of the organization in which he/she is seeking for internship are to be furnished. Further, the student along with the parent must submit an undertaking form. The committee shall scrutinize the applications and approve the same. If a student fails to acquire internship, he/she may be permitted to undergo equivalent work (mini project, research project, fabrication work, field work, research paper, etc.,) in the department under the guidance of a faculty member.

After the completion of the internship, the student must submit the report and attend a departmental internal assessment for award of grade and credits.

Guidelines for Massive Open Online Courses (MOOCs)

- 1. Head of the department should constitute a three member MOOC committee under his chairmanship along with two more members.
- 2. The committee should take the responsibility of
 - (i) Notifying the MOOC courses twice in a semester (May and November) along with the details of portals offering the MOOC such as NPTEL/SWAYAM.
 - (ii) Checking the relevance of courses to the concerned branch.
 - (iii) Verifying the syllabus of chosen MOOC course and to ensure that it is not studied in the regular curriculum (either full or partial)
- 3. A student willing to take MOOCS course should apply in the prescribed format to the concerned Head of the Department at least one week prior to the commencement of the MOOC course.
- 4. The MOOC committee should ensure the following
 - (i) The course duration must be minimum of 12 weeks
 - (ii) The course should contain a proctored examination for evaluation
 - (iii) The agency offering MOOCs should be a recognized and reputed one and approved by
 - the BOS of the concerned program.
- 5. Students should submit the Course completion certificate with marks memos to the department MOOCs committee.
- 6. If the certifying authority/agency is not able to conduct the exam, then the student can show certified course progress, applied hall ticket and mail communication from the authority as proofs and can avail the extension time by one semester for submitting the course completion certificate.
- 7. After the student submits the MOOCs certificates, the committee should recommend 3 credits and the appropriate grade to be allocated to the student and send to the Controller of Examination.
- 8. If a student fails to successfully complete and acquire the certificate as per the guidelines and timelines specified by the concerned MOOCs authority, he/she has to register for that course subsequently. Unsuccessful candidates in the first attempt shall be marked as supplementary.

Guidelines for Project work

- 1. In R20 regulations, there is no theory or practical courses in VIII semester. An exclusive 12 credit course is included as Project Work and Internship. The student should mandatorily undergo internship as well as project work parallelly. At the end of the semester the student should submit an internship completion certificate along with a project report. A student shall also be permitted to submit project report on the work carried out during the internship.
- 2. The departmental internship committee is advised to strictly adhere to the established guidelines for internships. Furthermore, it is recommended that internships for students be limited to organization/ industry authorized by APSCHE/AICTE INTERNSHIP PORTAL/PUBLIC SECTOR ORGANIZATIONS. This restriction applies to both online and offline internship opportunities.
- 3. The Head of the department should constitute a three-member Project Work Committee (PWC) under his chairmanship with three faculty members as defined in the Process Document for project work (R20 regulation). The PWC shall adhere to the process explained in the said document.
- 4. Evaluation of the Project work:
 - i) The evaluation shall be based on CIE and SEE. The CIE is for 30 marks which consists of reviews at the end of each month as per the Process Document in the form of seminars/presentations for 15 marks and the project report submitted at the end of the semester which is evaluated for 15 marks. A minimum of 15 (50%) marks and 50% attendance are to be secured by the student exclusively in CIE in order to be declared as qualified in the project work and eligible to write the SEE in the project work.
 - ii) SEE shall be evaluated in the form of a Viva-Voce and demonstration of the thesis work for 70 marks. Viva-voce Examination in project work shall be conducted by one internal examiner (Member of PWC) and one external examiner to be appointed by the principal. A minimum of 25 marks shall be obtained exclusively in SEE in order to be declared as passed in the Project work.
 - iii) Completion of internships along with Project work in VIII Semester is mandatory, if any student fails to complete internship, he/she will not be eligible for the award of degree. In such cases, the student has to repeat and complete the internship.
- 5. The project work committee should ensure the following, if the students are doing project work at any organization/ industry.
 - i) The student gets placement before commencement of eighth semester and joined the organization/Industry as advance placement. The student who obtained project work opportunity in organization / Industry may also be allowed as per the recommendation of the PWC.
 - ii) The above students will be informed to apply in the specified proforma for approval to undergo for project work along with the details and consent of the

(Autonomous)

DEPARTMENT OF COMPUTER SCIENCE AND ENGINEERING

organization in which he/she is seeking for doing project work. Further, the student and the parent/guardian have to submit an undertaking form to the concerned department. The PWC shall scrutinize the applications and approve.

- iii) The list of such approved students undertaking project work in organization/industry shall be maintained in the department by the PWC.
- iv) The students who are undertaking the project work out side the campus have to necessarily submit the monthly attendance duly certified by the concerned authority in the organization/ industry.
- v) The PWC will have to maintain interaction regularly with the out-side organization/ concerned who are offering the project works.
- vi) During the course of project work, the student has to attend the departmental internal reviews/assessment periodically as notified by the department mandatory. After the completion of the project work, the student has to submit the report and attend semester end assessment examination by paying prescribed exam fee for award of grade and credits.
- vii) The students who are undertaking the project work outside the campus will have to complete their project work with in the stipulated period (as per Academic Calander) along with the inhouse project work students and also submit the internship completion certificate at the end of the semester.

DEPARTMENT OF COMPUTER SCIENCE AND ENGINEERING

Process document for Project work

As per the R20 regulations, students are required to do a project work in the VIII semester and submit a report. The following is the process to be followed for the project work.

A. Projects Batches and Guide allocation

- 1. The Head of the department should constitute a three-member Project Work Committee (PWC) under his chairmanship with three faculty members. One of them shall be a senior faculty member and acts as a Project Coordinator.
- 2. List of faculty members and their specializations, research areas will be communicated to the students. The information is disseminated via email, notice boards and display on the website. List of projects and their titles/themes should be identified and same may be communicated to all the students. Project batches are formed based on the performance of the students up to VI semester.
- 3. Students are given an option of specifying their choices for the project titles/guides and the final allocation of guides to project batches is done based on the merit order and the choices opted by the project batches.
- 4. It is to be ensured that no project batch should have more than 4 students.
- 5. Not more than two batches should be allocated to each project guide.

B. Project classification and mapping with program outcomes and program specific outcomes.

Projects may be broadly classified into the following categories.

- 1. Application oriented: When the project is related to hardware, then all the components are procured and assembled to get the desired outcome. If it is related to software, then a complete working version of the application is to be created.
- 2. Research oriented: In this category extensive review of literature is done. This aims to learn and implement new methods or procedures and validate results.
- 3. Simulation projects: These projects may be hardware or software related. The students will create a working prototype for the same.
- The PWC should ensure that the projects are selected in such a way that the program outcomes and program specific outcomes are mapped with the themes of the project works.
- A document consisting of project titles, area of specialization, project guides should be prepared and submitted to the concerned HOD and should be put on the website. The theme of the work may be changed with the consent of the project guide.

C. Continuous monitoring mechanism and evaluation

- 1. Project slots (24 hours per week) should be allocated as per the existing scheme and curriculum.
- 2. A laboratory or a class room should be identified for executing the project works. It is preferred to have a separate laboratory for the purpose of conducting the project works.
- 3. Each project batch is allowed to consult their respective guide to discuss about their Progress during the project slot.
- 4. At the end of every month there will be an overall assessment of each project by the PWC by scheduling project reviews in association with project guides.

(Autonomous)

DEPARTMENT OF COMPUTER SCIENCE AND ENGINEERING

- 5. The performance of the students should be evaluated in each review and should be documented.
- 6. Department staff meeting should be conducted to discuss the performance of the students in the projects and should be documented.

D. Methodology to assess individual as well as collective Contribution/understanding of

Project:

- 1. The project guide should monitor the presence (attendance) of each student in the project work
- 2. The project guide should ensure that the batch allocated to him is able to understand the objectives of the project. The guide should also identify the requirements (hardware and software) of the project. If a particular software or hardware is not available, same may be communicated to the HOD and may be procured based on the financial and budgetary requirements.
- 3. Evaluation of the project is based on
 - i. Understanding the objectives of the project.
 - ii. Day to day work done by the students (Should be documented)
 - iii. Partial/Full completion of the project
 - iv. Students presentation and demonstration
 - v. Results and documentation
- 4. Evaluation is intimated to the students for further improvement

F. Papers published/Awards won/conferences attended

- 1. It is encouraged for every project batch to publish/communicate a paper in any national/ international conference/journal. The project guide may encourage the students so that the work of their batch is published as a research paper.
- 2. Students must be given some awareness/training program for effective writing of a research paper. The research papers should be checked with anti-plagiarism software before the submission to the concerned journal or conference.
- 3. A report should be prepared by the concerned coordinator comprising all the research papers published and should be made available in the library and soft copies must be put on the website for availability to the students.

(Autonomous)

DEPARTMENT OF COMPUTER SCIENCE AND ENGINEERING

VISION

To produce Computer Science Engineers with Global Standards who can handle the challenges in developing software services and products needed by the society and industry with their innovations and services.

MISSION

- To impart high quality education with effective teaching and learning process.
- To provide an environment where the students can handle research problems confidently.
- To prepare the students with latest technologies with fidelity towards industry.
- To inculcate professional ethics and human values in handling the engineering challenges.

PROGRAM EDUCATIONAL OBJECTIVES

PEO1: Choose diverse professional careers in software industry, research, academia, engineering, and administrative services.

PEO2: Apply the principles of basic sciences, mathematics and computer science to solve real world problems using digital computing systems.

PEO3: Analyze, design, implement and evaluate robust, scalable and cost-effective computer-based systems and processes in the industry with sustained self learning.

PEO4: Be aware of professional and ethical practices in the context of social impacts of computing.

(Autonomous)

DEPARTMENT OF COMPUTER SCIENCE AND ENGINEERING

PROGRAM OUTCOMES

- **PO1.** Engineering knowledge: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.
- **PO2. Problem analysis:** Identify, formulate, review research literature, and analyze complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.
- **PO3. Design/development of solutions:** Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.
- **PO4.** Conduct investigations of complex problems: Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.
- **PO5.** Modern tool usage: Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modeling to complex engineering activities with an understanding of the limitations.
- **PO6.** The engineer and society: Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional engineering practice.
- **PO7.** Environment and sustainability: Understand the impact of the professional engineering solutions in societal and environmental contexts, and demonstrate the knowledge of, and need for sustainable development.
- **PO8.** Ethics: Apply ethical principles and commit to professional ethics and responsibilities and norms of the engineering practice.
- **PO9.** Individual and team work: Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings.
- PO10. Communication: Communicate effectively on complex engineering activities with the engineering community and with society at large, such as, being able to

(Autonomous)

DEPARTMENT OF COMPUTER SCIENCE AND ENGINEERING

comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions.

PO11. Project management and finance: Demonstrate knowledge and understanding of the engineering and management principles and apply these to one's own work, as a member and leader in a team, to manage projects and in multidisciplinary environments.

PO12. Life-long learning: Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.

PROGRAM SPECIFIC OUTCOMES

PSO1. Domain knowledge: Acquire knowledge of hardware functionality, design and development of software components required to process the information.

PSO2. Problem solving skills: Analyze data, Identify required data structures, design suitable algorithms, develop, operate and maintain software for real world problems.

PSO3. Paradigm shifts: Understand the progressive changes in computing, possess knowledge of context aware applicability of paradigms.

List of Subjects offered under Honors in CSE

Note: - Students must acquire 20 credits for the award of Honors in CSE.

- i. 16 credits (04 courses@ 4 credits each) should be earned through the following list of courses.
- ii. 4 credits (02 courses@ 2 credits each) must be acquired through two MOOCs from the following list of courses with a minimum duration of 8/12weeks.
- iii. Before choosing those courses, students must complete prerequisites.

List of HONOR Courses	Mode
Advanced Data Structures	Class Room
Advanced Computer Architecture	Class Room
Prompt Engineering & AI Tools	Class Room
Advanced Database Management Systems	Class Room
Real Time Operating Systems	Class Room
Advanced Computer Networks	Class Room
Applied Cryptography	Class Room
Software Project Management	Class Room

Linear Algebra: Rank of a Matrix; Elementary transformations of a matrix; Gauss-Jordan method of finding the inverse;

Consistency of linear System of equations: Rouches theorem, System of linear Non-homogeneous equations, System of linear homogeneous equations; vectors; Eigen values; properties of Eigen values (without proofs); Cayley-Hamilton theorem (without proof).

[Sections: 2.7.1; 2.7.2; 2.7.6; 2.10.1; 2.10.2; 2.10.3; 2.12.1; 2.13.1; 2.14; 2.15.]

UNIT-2 12 Hours

Differential Equations of first order: Definitions; Formation of a Differential equation; Solution of a Differential equation; Equations of the first order and first degree; variables separable; Linear Equations; Bernoulli's equation; Exact Differential equations.

Equations reducible to Exact equations: I.F found by inspection, I.F of a Homogeneous equation,

In the equation M dx+ N dy=0, $\frac{\frac{\partial \dot{M}}{\partial y} - \frac{\partial N}{\partial x}}{N}$ is a function of x and $\frac{\frac{\partial N}{\partial x} - \frac{\partial M}{\partial y}}{M}$ is a function of y.

(Autonomous)

DEPARTMENT OF COMPUTER SCIENCE AND ENGINEERING

Applications of a first order Differential equations: Newton's law of cooling; Rate of decay of Radio-active materials.

[Sections: 11.1; 11.3; 11.4; 11.5; 11.6; 11.9; 11.10; 11.11; 11.12.1; 11.12.2; 11.12.4; 12.6; 12.8]

UNIT-3

12 Hours

Linear Differential Equations: Definitions; Theorem; Operator D; Rules for finding the complementary function; Inverse operator; Rules for finding the Particular Integral; Working procedure to solve the equation; Method of Variation of Parameters;

Applications of Linear Differential Equations: Oscillatory Electrical Circuits.

[Sections: 13.1; 13.2.1; 13.3; 13.4; 13.5; 13.6; 13.7;13.8.1;14.1;14.5]

UNIT-4 12 Hours

Laplace Transforms: Definition; conditions for the existence; Transforms of elementary functions; properties of Laplace Transforms; Transforms of derivatives; Transforms of integrals; Multiplication by tⁿ; Division by t; Inverse transforms- Method of partial fractions; Other methods of finding inverse transforms; Convolution theorem(without proof);

Application to differential equations: Solution of ODE with constant coefficients using Laplace transforms.

[Sections:21.2.1; 21.2.2; 21.3; 21.4; 21.7; 21.8; 21.9; 21.10; 21.12; 21.13; 21.14; 21.15.1]

						IT-1									. Hours

Introduction: water quality parameters

Characteristics: Alkalinity, Hardness - Estimation & simple numerical problems,

Boiler Troubles - Sludges, Scales, Caustic embrittlement, boiler corrosion, Priming and foaming;

Internal conditioning- phosphate, calgon and carbonate methods.

External conditioning - Ion exchange process & Zeolite process WHO Guidelines, Potable water, Sedimentation, Coagulation, Filtration.

Disinfection methods: Chlorination, ozonization and UV treatment.

Salinity – Treatment of Brackish water by Reverse Osmosis and Electrodialysis.

UNIT-2 12 Hours

Thermodynamic functions: energy, entropy and free energy. Estimations of entropy and free energies. Free energy and emf. Cell potentials, the Nernst equation and applications.

Corrosion: Types of corrosion - Chemical or dry corrosion, Electrochemical or wet corrosion; Galvanic, stress, pitting and differential aeration corrosion; Factors effecting corrosion, **Corrosion control** - Cathodic protection, and electro plating (Au) & electrodes Ni plating.

(Autonomous)

DEPARTMENT OF COMPUTER SCIENCE AND ENGINEERING

UNIT-3 12 Hours

Fuels: Classification of fuels; Calorific value of fuels (lower, higher)

Solid fuels: Determination of calorific value (Bomb Calorimeter) & related problems, Coal ranking. **Liquid Fuels**: Petroleum refining and fractions, composition and uses. Knocking and anti-knocking Agents, Octane number and Cetane number; Bio fuels- Biodiesel, general methods of preparation and advantages

Gaseous fuels: CNG and LPG, Flue gas analysis – Orsat apparatus.

UNIT-4 12 Hours

Organic reactions and synthesis of a drug molecule

Introduction to reactions involving substitution (SN_1 , SN_2), addition (Markownikoff's and anti-Markwnikoff's rules), elimination (E_1 & E_2), Synthesis of a commonly used drug molecule.(Aspirin and Paracetamol)

Polymers: Conducting polymers: Classification, Intrinsic and Extrinsic conducting polymers and their applications. Plastics: Thermoplasts and thermosetting plastics, Bskelite and PVC.

Bio degradable polymers: types, examples-Polyhydroxybuterate (PHB), Polyhydroxybuterate-co-β-hydroxyvalerate (PHBV), applications.

hydroxyvalerat	e (PHBV), applications.

DEPARTMENT OF COMPUTER SCIENCE AND ENGINEERING

Introduction to Problem Solving	
(For A.Y. 2023-24)	

I B.Tech – I Semester (Code: 20CS104/CS02)

Lectures	:	2T + 2P / Week	Continuous Assessment	:	30
Final Exam	:	3 Hours	Final Exam Marks	:	70

Pre-Requisite: None

UNIT-1 12 Hours

Introduction to components of a computer system: Memory, processor, I/O Devices, storage.

Software: system software, application software, computer classifications, generation of computer.

Procedure: steps involved in problem solving, Algorithm, Steps involved in algorithm development. Flow Chart, Advantages of Flowcharts, Symbols used in Flow Charts, Simple problems using flow chart, pseudo code method.

UNIT-2 12 Hours

Fundamental algorithms: exchange the values of two variables, counting, summation of a set of numbers, factorial computation, sine function computation, generation of the Fibonacci sequence, reverse the digits of an integer, base conversion, charter to number conversion.

UNIT-3 12 Hours

Factoring methods: finding the square root of a number, the smallest divisor of an integer, the greatest common divisor of two integers, generate prime numbers, computing the prime factors of an integer, generation of pseudo-random numbers, raising a number to a large power.

UNIT-4 12 Hours

Array Techniques: array order reversals, remove of duplicates from an order array, finding the Kth smallest element, finding the kth largest element and higher dimensional arrays.

Efficiency of algorithm: redundant computation, referencing array elements, inefficiency due to late termination, early detection of desired output conditions, trading storage for efficiency gain.

Analysis of algorithms: computational complexity, order notation, best, worst and average case behavior.

Text Books: How to Solve it by Computer, R.G. Dromey, First Edition, 2006, Pearson.

Pro Roquisito:	Pre-Requisite: None										

LIST OF EXPERIMENTS

Experiment 1: Computer Hardware Basics: PC Hardware introduces the students to a personal computer and its basic peripherals, the process of assembling a personal computer, installation of system software like MS Windows, Linux and the required device drivers. In addition, hardware and software level troubleshooting process, tips and tricks would be covered.

Every student should identify the peripherals of a computer, components in a CPU and its functions. Draw the block diagram of the CPU along with the configuration of each peripheral and submit to your instructor. Every student should disassemble and assemble the PC back to working condition.

Experiment 2: Installation of Software: Every student should individually install operating system like Linux or MS windows on the personal computer. The system should be configured as dual boot with both windows and Linux.

Experiment 3: Hardware Troubleshooting: Students have to be given a PC which does not boot due to improper assembly or defective peripherals. They should identify the problem and fix it to get the computer back to working condition.

Experiment 4: Software Troubleshooting: Students have to be given a malfunctioning CPU due to system software problems. They should identify the problem and fix it to get the computer back to working condition.

Experiment 5: Orientation & Connectivity Boot Camp: Students should get connected to their Local Area Network and access the Internet. In the process they configure the TCP/IP setting. Finally students should demonstrate how to access the websites and email.

Experiment 6: Web Browsers, Surfing the Web: Students customize their web browsers with the LAN proxy settings, bookmarks, search toolbars and pop up blockers. Also, plug-ins like Macromedia Flash and JRE for applets should be configured. Search Engines & Netiquette: Students should know what search engines are and how to use the search engines. Usage of search engines like Google, Yahoo, ask.com and others should be demonstrated by student.

Experiment 7: Cyber Hygiene: Students should learn about viruses on the internet and install antivirus software. Student should learn to customize the browsers to block pop ups, block active x downloads to avoid viruses and/or worms.

Experiment 8: Drawing flowcharts (Raptor Tool): Students should draw flowcharts for the problems validating an email id entered by user, printing first fifty numbers and preparing electricity bill

Experiment 9: Productivity tool: Microsoft (MS) office: Importance of MS office, Details of the three tasks and features that should be covered in each, MS word – Accessing, overview of toolbars,

(Autonomous)

DEPARTMENT OF COMPUTER SCIENCE AND ENGINEERING

saving files, Using help and resources, rulers, format painter. Formatting Styles, Inserting table, Bullets and Numbering, Changing Text Direction, Cell alignment, Footnote, Hyperlink, Symbols, Spell Check, Track Changes.

Experiment 10: Practice with MS Word to create project certificate: Features to be covered: - Formatting Fonts in word, Drop Cap in word, Applying Text effects, Using Character Spacing, Borders and Colours, Inserting Header and Footer, Using Date and Time option in Word.

Experiment 11: Orientation on Spread sheet: Accessing, overview of toolbars, saving spreadsheet files, Using help and resources. Creating a Scheduler: - Gridlines, Format Cells, Summation, auto fill, Formatting Text

Experiment 12: Creating Power Point: Student should work on basic power point utilities and tools in Ms Office which help them create basic power point presentation. PPT Orientation, Slide Layouts, Inserting Text, Formatting Text, Bullets and Numbering, Auto Shapes, Lines and Arrows, Hyperlinks, Inserting Images, Tables and Charts.

LIST OF EXPERIMENTS

1. Introduction to Chemistry Lab (the teachers are expected to teach fundamentals like Calibration of Volumetric Apparatus, Primary, Secondary Solutions, Normality, Molarity, Molality etc. and error, accuracy, precision, theory of indicators, use of volumetric titrations).

2. Volumetric Analysis:

- a. Estimation of Washing Soda.
- b. Estimation of Active Chlorine Content in Bleaching Powder
- c. Estimation of Mohr's salt by permanganometry.
- b. Estimation of given salt by using Ion-exchange resin using Dowex-50.

3. Analysis of Water:

- a. Determination of Alkalinity of Tap water.
- b. Determination of Total Hardness of ground water sample by EDTA method
- c. Determination of Salinity of water sample.

4. Estimation of properties of oil:

(Autonomous) DEPARTMENT OF COMPUTER SCIENCE AND ENGINEERING

- a. Estimation of Acid Value
- b. Estimation of Saponification value.

5. Preparations:

- a. Preparation of Soap

b. Preparation	on of Urea-formaldehyde resin
c. Preparatio	on of Phenyl benzoate.

I B. Tech. – I Semester (Code: 20CSL103/ELL01)												
Practicals	:	3 Hours/Week Continuous Assessment : 30										
Final Exam	:	3 Hours	Final Exam Marks	:	70							

Pre-Requisite: None.

Course Objectives: Students will be able to

- To comprehend the importance, barriers and strategies of listening skills in English.
- To illustrate and impart practice Phonemic symbols, stress and intonation.
- To practice oral skills and receive feedback on learners' performance.
- To practice language in various contexts through pair work, role plays, group work and dialogue conversations

Course Outcomes: Students will be able toCO1Better understand the nuances of English language through audio- visual experience and group activitiesCO2Develop neutralization of accent for intelligibilityCO3Build confidence to enhance their speaking skillsCO4Use effective vocabulary both in formal and informal situations

(Marine, pond and estuaries).

Biodiversity: Definition and levels of Biodiversity; Values of Biodiversity - Consumptive, Productive, Social, Aesthetic, Ethical and Optional; Threats and Conservation of Biodiversity; Hot Spots of Biodiversity, Bio-geographical Classification of India, India as a mega diversity nation. Chipko movement case study

> UNIT-2 8 Hours

(Autonomous)

DEPARTMENT OF COMPUTER SCIENCE AND ENGINEERING

Natural resources: Land: Land as a resource, Causes and effects of land degradation - Soil erosion, Desertification. **Forest**: Use of forests, Causes and effects of deforestation, Afforestation, Mining - benefits and problems. **Water**: Uses, floods and drought, Dams - benefits and problems.

Energy: Importance of energy, Environmental Impacts of Renewable and Non-renewable energy resources. Silent Valley Project and Narmada BachaoAndolan case studies

Sustainability: Definition, Concept and Equitable use of resources for sustainable development; Rain water harvesting and Watershed management. Fieldwork on Rain water harvesting and Watershed management.

UNIT-3 8 Hours

Pollution: Definition; Causes, effects and control of air, water and nuclear pollution; Chernobyl Nuclear Disaster case study; Solid Waste: urban, Industrial and hazardous wastes; Integrated waste management - 3R approach, composting and vermicomposting.

Environmental acts: Water and air (Prevention and Control of pollution) acts, Environmental protection act, Forest Conservation act.

UNIT-4 8 Hours

Environmental issues: Green House effect & Global warming, Ozone layer depletion, Acid rains, Green Revolution, Population Growth and environmental quality, Environmental Impact Assessment. Environmental Standards (ISO 14000, etc.)

Case Studies: Bhopal Tragedy, Mathura Refinery and TajMahal, and Ralegan Siddhi (Anna Hazare).

Field work: Visit to a local area to document environmental assets – Pond/Forest/Grassland. Visit to a local polluted site- Urban and industry/ Rural and Agriculture.

Productive, Social, Aesthetic, Ethical and Optional; Threats and Conservation of Biodiversity; Hot Spots of Biodiversity, Bio-geographical Classification of India, India as a mega diversity nation. Chipko movement case study

> **UNIT-2** 8 Hours

(Autonomous)

DEPARTMENT OF COMPUTER SCIENCE AND ENGINEERING

Natural resources: Land: Land as a resource, Causes and effects of land degradation - Soil erosion, Desertification. **Forest:** Use of forests, Causes and effects of deforestation, Afforestation, Mining - benefits and problems. **Water:** Uses, floods and drought, Dams - benefits and problems.

Energy: Importance of energy, Environmental Impacts of Renewable and Non-renewable energy resources. Silent Valley Project and Narmada BachaoAndolan case studies

Sustainability: Definition, Concept and Equitable use of resources for sustainable development; Rain water harvesting and Watershed management. Fieldwork on Rain water harvesting and Watershed management.

UNIT-3 8 Hours

Pollution: Definition; Causes, effects and control of air, water and nuclear pollution; Chernobyl Nuclear Disaster case study; Solid Waste: urban, Industrial and hazardous wastes; Integrated waste management - 3R approach, composting and vermicomposting.

Environmental acts: Water and air (Prevention and Control of pollution) acts, Environmental protection act, Forest Conservation act.

UNIT-4 8 Hours

Environmental issues: Green House effect & Global warming, Ozone layer depletion, Acid rains, Green Revolution, Population Growth and environmental quality, Environmental Impact Assessment. Environmental Standards (ISO 14000, etc.)

Case Studies: Bhopal Tragedy, Mathura Refinery and TajMahal, and Ralegan Siddhi (Anna Hazare).

Field work: Visit to a local area to document environmental assets – Pond/Forest/Grassland. Visit to a local polluted site- Urban and industry/ Rural and Agriculture.

UNIT-1 12 Hours

Numerical Solution of Equations: Introduction; Solution of algebraic and transcendental equations: Bisection method, Method of false position, Newton-Raphson method; Useful deductions from the Newton-Raphson formula; Solution of linear simultaneous equations; Direct methods of solution: Gauss elimination method, Gauss-Jordan method, Factorization method; Iterative methods of solution: Jacobi's iterative method, Gauss-Seidel iterative method.

[Sections: 28.1; 28.2; 28.3; 28.5; 28.6; 28.7.1;28.7.2].

UNIT-2 12 Hours

Finite differences and Interpolation: Finite differences: Forward differences, Backward differences; Newton's interpolation formulae: Newton's forward interpolation formula, Newton's backward interpolation formula; Interpolation with unequal intervals; Lagrange's interpolation formula; Divided differences; Newton's divided difference formula; Numerical integration;

(Autonomous)

DEPARTMENT OF COMPUTER SCIENCE AND ENGINEERING

Trapezoidal rule; Simpson's one-third rule; Simpson's three-eighth rule; Numerical solution of ODE's: Introduction; Picard's method; Euler's method; Runge-Kutta method. [Sections:29.1; 29.1-1; 29.1-2; 29.6; 29.9; 29.10; 29.11; 29.12; 30.4; 30.6; 30.7; 30.8; 32.1; 32.2; 32.4; 32.7].

UNIT-3 12 Hours

Multiple Integrals: Double integrals; Change of order of integration; Double integrals in polar coordinates; Area enCOsed by plane curves; Triple integrals; Volumes of solids: Volume as Triple integrals, Change of variables.

[Sections: 7.1; 7.2; 7.3; 7.4; 7.5; 7.6.2; 7.7.2].

UNIT-4 12 Hours

Vector calculus and its Applications: Scalar and vector point functions; Del applied to scalar point functions-Gradient: Definition, Directional derivative; Del applied to vector point functions: Divergence, Curl; Line integral; Surfaces: Surface integral, Flux across a surface; Green's theorem in the plane (without proof); Stokes theorem (without proof); Gauss divergence theorem (without proof).

[Sections: 8.4; 8.5.1; 8.5.3; 8.6; 8.11; 8.12; 8.13; 8.14; 8.16]

DEPARTMENT OF COMPUTER SCIENCE AND ENGINEERING

Basic Electrical and Electronics Engineering										
I B. Tech. – I Semester (Code: 20CS203/EE01)										
Lectures	:	3 Hours/Week	Continuous Assessment	:	30					
Final Exam	:	3 Hours	Final Exam Marks	:	70					

Pre-Requisite: None.

Course Objectives: Students will be able to

- To understand basic Laws in circuits, analysis of simple DC circuits, Theorems and its applications, fundamentals of AC circuits & its analysis and concepts of three phase balanced circuits
- To learn basic properties of magnetic materials and its applications.
- To understand working principle, construction, applications and performance of DC machines, AC machines.
- To learn basic concepts, working principal, characteristics and applications of semiconductor diode and transistor family.
- To gain knowledge about the static converters and regulators.
- To learn basic concepts of power transistors and operational amplifiers closer to practical applications.

Course O	utcomes: Students will be able to
CO1	Solve problems involving with DC and AC excitation sources in electrical circuits.
CO2	Compare properties of magnetic materials and its applications
CO3	Analyze construction, principle of operation, application and performance of DC machines and AC machines.
CO4	Explore characteristics and applications of semiconductor diode and transistion family.
CO5	Make the static converters and regulators
CO6	Analyze concepts of power transistors and operational amplifiers closer to practical applications

UNIT-1 12 Hours

Electrical Circuits

Electrical circuit elements (R, L and C), voltage and current sources, Kirchhoff current and voltage laws, analysis of simple circuits with dc excitation. Superposition, Thevenin and Norton Theorems. Representation of sinusoidal waveforms, peak and rms values, phasor representation, real power, reactive power, apparent power, power factor. Analysis of single-phase AC circuits consisting of R, L, C, RL, RC, RLC combinations (series and parallel), resonance. Three-phase balanced circuits, voltage and current relations in star and delta connections.

(Autonomous)

DEPARTMENT OF COMPUTER SCIENCE AND ENGINEERING

UNIT-2	12 Hours

Electrical Machines

Magnetic materials, BH characteristics, Construction, working of DC machines, ideal and practical transformer, equivalent circuit, losses in transformers, regulation and efficiency. Autotransformer and three-phase transformer connections. Generation of rotating magnetic fields, Construction and working of a three-phase induction motor, Significance of torque-slip characteristic. Loss components and efficiency, starting and speed control of induction motor. Single-phase induction motor. Construction and working of synchronous generators.

UNIT-3 12 Hours

Semiconductor Diodes and applications

Semiconductor materials, semiconductor diode, Resistance levels, Diode equivalent circuits, Zener diode, Light emitting diode, Load line analysis, half wave rectification, Full wave rectification, Bridge rectifier, Use of capacitor filter in rectifier, Zener diode voltage regulator, Clippers, Clampers

Bipolar Junction Transistors

Transistor construction and operation, Common base configuration, Transistor amplifying action, Common emitter configuration, Common collector configuration, Limits of operation. DC load line and bias point, Voltage divider bias of transistor.

DEPARTMENT OF COMPUTER SCIENCE AND ENGINEERING

	Programming for Problem Solving										
I B.Tech – II Semester (Code: 20CS204/CS01)											
Lectures	:	2 Hours/Week, 1 Hour Tutorial	Continuous Assessment	:	30						
Final Exam	:	3 Hours	Final Exam Marks	:	70						

Pre-Requisite:

Course Objectives: Students will be able to

- Understand basic concepts of C Programming such as: C-tokens, Operators, Input/output, Arithmetic rules.
- Develop problem-solving skills to translate "English" described problems into Programs written using C language.
- > Use Conditional Branching, Looping, and Functions.
- Apply pointers for parameter passing, referencing and differencing and linking data structures.
- Manipulate variables and types to change the problem state, including numeric, character, array and pointer types, as well as the use of structures and unions, File.

Course Outcomes: Students will be able to									
CO1	Formulate simple algorithms for arithmetic and logical problems and remember the basics of computer fundamentalsof computer history.								
CO2	Translate the algorithms to programs also to test and execute the programs and correct syntax and logical errors and implementing conditional branching, iteration and recursion.								
CO3	Analyze the problem for its decomposition into functions.								
CO4	Understand the file handling and dynamic memory allocation using c programming language.

UNIT-1 12 Hours

Overview of C, Constants, Variables and Data Types, Operators and Expressions, Managing I/O Operations. Decision Making and Branching.

Programming Exercises for Unit I: C-expressions for algebraic expressions, evaluation of arithmetic and Boolean expressions. Syntactic and logical errors in a given program, output of a given program, values of variables at the end of execution of a program fragment, Programs using Scientific and Engineering formulae. Finding the largest of the three given numbers. Computation of discount amount on different types of products with different discount percentages. Finding the class of an input character, finding the type of triangle formed with the given sides, computation of income-tax, finding given year is leap year or not, and conversion of lower case character to its uppercase.

(Autonomous) DEPARTMENT OF COMPUTER SCIENCE AND ENGINEERING

	UNIT-2	12 Hours								
Decision Makin	g and Looping, Arrays, Character Arrays and Strings.	•								
Programming	Exercises for UnitII: To print the sum of the digits of a gi	ven number and to								
display the imag	ge of a given number. To find whether a given number is prime	, printing Fibonacci								
sequence and to	find prime factors of a given number. To print graphic patte	rns of symbols and								
numbers. To fin	d the length of a string, compare strings, reverse a string, copy	a string and to find								
whether the giv	en string is palindrome or not with and without using String H	Iandling Functions.								
Transpose of a 1	natrix and sorting of names using arrays.									
	UNIT-3	12 Hours								
	nctions, Structures and Unions, Pointers									
0 0	Exercises for Unit -III: Functions-Recursive functions to fin									
,	non Divisor), string operations using pointers and pointer ari									
two variable val	ues. Sorting a list of student records on register number using	array of pointers.								
	UNIT-4	12 Hours								
File Manageme	nt in C, Dynamic Memory Allocation, Preprocessor									
Programming	Exercises for Unit - IV: Operations on complex numbers, and	I to read an input file								
of marks and ge	nerate a result file, sorting a list of names using command line	arguments. Copy the								
contents of one	file to another file. Allocating memory to variables dynamical	ly.

LIST OF EXPERIMENTS

- 1. Determination of acceleration due to gravity at a place using compound pendulum.
- 2. Study the variation of intensity of magnetic field along the axis of a circular coil using Stewart-Gee's apparatus.
- 3. Determination of thickness of thin wire using air wedge interference bands
- 4. Determination of radius of curvature of a Plano convex lens by forming Newton's rings...
- 5. Determination of wavelengths of mercury spectrum using grating normal incidencemethod.
- 6. Determination of dispersive power of a given material of prism using prism minimum deviation method.
- 7. Draw the resonant characteristic curves of L.C.R. series circuit and calculate the resonant frequency.
- 8. Draw the characteristic curves of a photocell and calculate the maximum velocity of electron.
- 9. Verify the laws of transverse vibration of stretched string using sonometer.
- 10. Determine the rigidity modulus of the given material of the wire using Torsionalpendulum.
- 11. Draw the load characteristic curves of a solar cell.
- 12. Determination of Hall coefficient of a semiconductor.
- 13. Determination of voltage and frequency of an A.C. signal using C.R.O.
- 14. Determination of Forbidden energy gap of Si &Ge.
- 15. Determination of wavelength of laser source using Diode laser.

Basic Electrical and Electronics Engineering Lab										
	I B.Tech – II Semester (Code: 20CSL202/EEL01)									
Practicals	:	3 Hours/Week	Continuous Assessment	:	30					
Final Exam : 3 Hours Final Exam Marks : 70										

Pre-Requisite: None.

Course Objectives: Students will be able to

- To understand basic Laws in circuits, analysis of simple DC circuits, Theorems and its applications, fundamentals of AC circuits & its analysis and concepts of three phase balanced circuits
- To learn basic properties of magnetic materials and its applications.
- To understand working principle, construction, applications and performance of DC machines, AC machines.
- To learn basic concepts, working principal, characteristics and applications of semiconductor diode and transistor family.
- To gain knowledge about the static converters and regulators.
- To learn basic concepts of power transistors and operational amplifiers closer to practical applications.

Course Outcomes: Students will be able to								
CO1	Validate the basic network theorems such as KCL, KVL, superposition, Thevenin's							
CO1	and Norton's theorems.							
CO2	Measure the parameters of choke coil.							
CO3	Figure out the parameters, regulation, and efficiency of single-phase transformer.							
CO4	Discriminate between the characteristics of PN junction diode, Zener diode and							
CO4	Transistor.							

Mapping of Course Outcomes with Program Outcomes & Program Specific Outcomes

CO4	3	3	1	3	-	-	-	-	3	2	-	-	3	-	-

LIST OF EXPERIMENTS

- 1. Verification of KCL and KVL
- 2. Verification of Superposition theorem
- 3. Verification of Thevenin's theorem
- 4. Verification of Norton's theorem
- 5. Parameters of choke coil
- 6. Measurement of low and medium resistance using volt ampere method
- 7. OC & SC test of single phase transformer
- 8. Load test on single phase transformer
- 9. V-I characteristics of PN junction Diode
- 10. V-I characteristics of Zener Diode

(Autonomous)

DEPARTMENT OF COMPUTER SCIENCE AND ENGINEERING

- 11. Characteristics of CE Configuration
- 12. Transfer and Drain Characteristics of JFET
- 13. Calculation of Ripple factor using Half wave rectifier
- 14. Calculation of Ripple factor using Full wave rectifier
- 15. Non linear wave shaping clippers/clampers

Note: Minimum 10 experiments should be carried.

DEPARTMENT OF COMPUTER SCIENCE AND ENGINEERING

Programming for Problem Solving Lab									
I B.Tech – II Semester (Code: 20CSL203/CSL01)									
Practicals	:	3 Hours/Week	Continuous Assessment : 30						
Final Exam	:	3 Hours	Final Exam Marks : 70						
Pre-Requisite	: N	one.							

Course Objectives: Students will be able to

- Understand basic concepts of C Programming such as: C-tokens, Operators, Input/output, Arithmetic rules.
- Develop problem-solving skills to translate "English" described problems into Programs written using C language.
- > Use Conditional Branching, Looping, and Functions.
- Apply pointers for parameter passing, referencing and differencing and linking data structures.
- Manipulate variables and types to change the problem state, including numeric, character, array and pointer types, as well as the use of structures and unions, File.

Course	Outcomes: Students will be able to								
Course	Juise Outcomes. Students will be use to								
CO1	Address the challenge, pick and analyze the appropriate data representation formats and algorithms.								
CO2	Choose the best programming construct for the job at hand by comparing it to other structures and considering their constraints.								
СОЗ	Develop the program on a computer, edit, compile, debug, correct, recompile and run it.								
CO4	Identify tasks in which the numerical techniques learned are applicable and apply them to write programs, and hence use computers effectively to solve the task.								

Mapping of Course Outcomes with Program Outcomes & Program Specific Outcomes **POs PSOs** CO CO₁ CO₂ _ **CO3** CO₄

LIST OF EXPERIMENTS

1. A program for electricity bill taking different categories of users, different slabs in each category. (Using nested if else statement).

Domestic Customer:								
Consumption Units	Rate of C	harges(Rs.)						
0 - 200	0.50 per ui	nit						
201 – 400	100 plus	0.65 per unit						
401 – 600	230 plus	0.80 per unit						
601 and above	390 plus	1.00 per unit						
Commercial Custome	er:							

(Autonomous)

DEPARTMENT OF COMPUTER SCIENCE AND ENGINEERING

Consumption Units	Rate of Ch	arges(Rs.)
0-50	0.50 per un	it
100 – 200	50 plus	0.60 per unit
201 – 300	100 plus	0.70 per unit
301 and above	200 plus	1.0 per unit

- 2. Write a C program to evaluate the following (using loops):
 - a) $1 + x^2/2! + x^4/4! + \dots$ upto ten terms
 - b) $x + x^3/3! + x^5/5! + ...$ upto 7 digit accuracy
- 3. Write a C program to check whether the given number is
 - a) Prime or not.
 - b) Perfect or Abundant or Deficient.
- 4. Write a C program to display statistical parameters (using one dimensional array).
 - a) Mean
 - b) Mode
 - c) Median
 - d) Variance.
- 5. Write a C program to read a list of numbers and perform the following operations
 - a) Print the list.
 - b) Delete duplicates from the list.
 - c) Reverse the list.
- 6. Write a C program to read a list of numbers and search for a given number using Binary search algorithm and if found display its index otherwise display the message "Element not found in the List".
- 7. Write a C program to read two matrices and compute their sum and product.
- 8. A menu driven program with options (using array of character pointers).
 - a) To insert a student name
 - b) To delete astudent name
 - c) To print the names of students
- 9. Write a C program to read list of student names and perform the following operations
 - a) To print the list of names.
 - b) To sort them in ascending order.
 - c) To print the list after sorting.
- 10. Write a C program that consists of recursive functions to
 - a) Find factorial of a given number
 - b) Solve towers of Hanoi with three towers (A, B & C) and three disks initially on tower A.
- 11. A Bookshop maintains the inventory of books that are being sold at the shop. The list includes details such as author, title, price, publisher and stock position. Whenever a customer wants a book the sales person inputs the title and the author, and the system searches the list and displays whether it is available or not. If it is not, an appropriate message is displayed, if it is, then the system displays the book details and request for the number of copies required, if the requested copies are available the total cost of the requested copies is displayed otherwise the message "required copies not in stock" is displayed. Write a program for the above in structures with suitable functions.

(Autonomous) DEPARTMENT OF COMPUTER SCIENCE AND ENGINEERING

12. Write a C program to read a data file of students' records with fields (Regno, Name, M1,M2,M3,M4,M5) and write the successful students data (percentage > 40%) to a data file

(Autonomous)

DEPARTMENT OF COMPUTER SCIENCE AND ENGINEERING

	Probability & Statistics												
II B. Tech. – III Semester (Code: 20CS301/MA03)													
Lectures	:	2 Hours /Week, 1 Hour Tutorial	Continuous Assessment	:	30								
Final Exam	:	3 hours	Final Exam Marks	:	70								
Pre-Requisite	: No	one.											

Course Objectives: Students will be able to

- Apply the continuous probability densities to various problems in science and engineering.
- Estimate the point and interval estimators of the mean, variance and proportion for the given Sample data and apply Z-test, t-test to various real-life problems
- Apply various sample tests like F-test and $\chi 2$ -test for decision making regarding the population based on sample data.
- Compute the level of correlation, the best fit curve to the given data by the method of least squares and also perform ANOVA arising in the field of engineering.

	Course O	Outcomes: Students will be able to
	CO1	Apply discrete and continuous probability distributions to various problems arising
	COI	in Engineering applications.
	CO2	Perform Test of Hypothesis for a population parameter for single sample.
	CO3	Perform Test of Hypothesis for population parameters for multiple samples.
j	CO4	Interpret the results of correlation, regression and one way ANOVA for the given
	CO4	data.

(Autonomous)

DEPARTMENT OF COMPUTER SCIENCE AND ENGINEERING

Exception Handling

Multithreaded Programming

I/O: I/O Basics, Reading Console Input, Writing Console Output, The Print Writer class, Reading and Writing Files, Automatically Closing a File.

UNIT-4 12 Hours

The Applet Class: Applet Architecture, An Applet Skeleton, Applet program to draw shapes, setting Color, Font using Graphics class

Event Handling:

Introducing the AWT: Window Fundamentals, AWT components: Label, Text Field, Text Area, Checkbox, Checkbox Group, Button, Layout Managers: Flow Layout, Grid Layout, and Border Layout.

GUI Programming with Swing: The Origins of Swing, Advantages of Swing over AWT, The MVC Connection, **Swing Components:** JLabel, JText Field, JText Area, JCheck box, JButton, JTabbed Pane, JTable, JTree, JCombo Box

UNIT-1 12 Hours

Introduction: What OSs Do, Computer System Operation, Storage structure, OS Structure, OS Operations.

Operating-System Structures: OS Services, User and operating system Interface, System Calls, Types of System Calls, System Programs, OS Design and Implementation, OS Structure.

Processes: Process Concept, Process Scheduling, Operations on Processes, Inter- process Communication.

Threads: Overview, Multicore Programming, Multithreading Models.

[Sections:1.1, 1.2.1, 1.2.2,1.4,1.5, 1.5.1,2.1, 2.2,2.3,2.4, 2.5, 2.6, 2.7,2.7.1,2.7.2,2.7.3,2.7.4

(Autonomous)

DEPARTMENT OF COMPUTER SCIENCE AND ENGINEERING

3.1, 3.2, 3.3, 3.4, 4.1, 4.2, 4.3]

UNIT-2 12 Hours

CPU Scheduling: Basic Concepts, Scheduling Criteria, Scheduling Algorithms.

Process Synchronization: Background, The Critical-Section Problem, Peterson's Solution, Synchronization Hardware, Mutex Locks, Semaphores, Classic problems of Synchronization, Monitors.

[Sections : 6.1,6.2,6.3, 5.1,5.2,,5.3,5.4,5.5,5.6,5.7,5.8]

UNIT-3

12 Hours

Deadlocks: System Model, Deadlock Characterization, Methods for Handling Deadlocks, Deadlock Prevention, Avoidance, Detection and Recovery.

Main Memory: Background, Swapping, Contiguous Memory Allocation, Segmentation, Paging, Structure of Page Table.

Virtual-Memory: Background, Demand Paging, Copy-on-Write, Page Replacement, Allocation of Frames, Thrashing, Other Considerations.

[Sections; 7.1,7.2,7.3,7.4,7.5,7.6,7.7,8.1,8.2,8.3,8.4,8.5,8.6,9.1, 9.2,9.3,9.4,9.5,9.6,9.9]

UNIT-4

12 Hours

File System Interface: File concept, Access Methods, Directory and Disk Structure,

File System Implementation: File System Structures, Directory Implementation, Allocation Methods

Protection: Goals of Protection, Principles of Protection, Domain of Protection- Domain Structure, Access Matrix, Implementation of Access Matrix.

Mass Storage Structure: Over View, Disk Structure, Disk Scheduling, Disk Management, RAID levels

[Sections:10.1,10.2,10.4,10.5,10.7,11.1,11.2,11.3,11.5,12.1,12.3,12.4,14.1,14.2,14.3,14.3.1,1 4.4,14.5]

Linux Essentials										
(Skill Oriented Course - I)										
II B. Tech. – III Semester (Code: 20CSL301/SOC1)										
Practicals	:	5 Hours/Week (2T+3P)	Continuous Assessment	:	30					
Final Exam	:	3 hours	Final Exam Marks	:	70					

Pre-Requisite: None.

Course Objectives: Students will be able to

- > Organize and manipulate files and directories
- Use the vi text editor to create and modify files
- Use SED command for insertion, deletion, and search and replace (substitution).
- Understand pattern scanning and processing using AWK.
- Create structured shell programming which accept and use positional parameters and exported variables.
- Understand File management system calls to provide I/O support for storage device types and multiple users.

CO1 Recognize the main elements, architecture, and operations associated with the UNIX operating system. CO2 Identify SED, text processing instructions, and how to use AWK in scripting languages. CO3 Gain an understanding of shell programming techniques. CO4 Assess the system calls pertaining to file management.

Mapping of Course Outcomes with Program Outcomes & Program Specific Outcomes

CO4	3	3	3	-	-	-	-	2	-	2	-	3	3	3	3

UNIT-1 20 Hours

Directory commands – pwd, cd, mkdir, rmdir commands. The dot (.) and double dots (..) notations to represent present and parent directories and their usage in relative path names. File related commands –Editing with vi, cat, mv, rm, cp, wc. File attributes and permissions and knowing them. The ls command with options. Changing file permissions: (chmod) the relative and absolute permissions changing methods. Recursively changing file permissions. Directory Permissions. Other Basic commands: cal, date, df, du, find, jobs, kill ,less and more, ps, set, wc, who.

LIST OF EXPERIMENTS

- 1. Obtain the following results (i) To print the name of operating system (ii) To print the login name (iii) To print the host name
- 2. Find out the users who are currently logged in and find the particular user too.
- 3. Display the calendar for (i) Jan 2000 (ii) Feb 1999 (iii) 9th month of the year 7
- A.D (iv) For the current month (v) Current Date Day Abbreviation, Month

(Autonomous)

DEPARTMENT OF COMPUTER SCIENCE AND ENGINEERING

Abbreviation along with year

- 4. Display the time in 12-Hour and 24 Hour Notations.
- 5. Display the Current Date and Current Time.
- 6. Display the message "GOOD MORNING" in enlarged characters.
- 7. Display the name of your home directory.
- 8. Create a directory SAMPLE under your home directory.
- 9. Create a subdirectory by name TRIAL under SAMPLE.
- 10. Change to SAMPLE.
- 11. Change to your home directory.
- 12. Change from home directory to TRIAL by using absolute and relative pathname.
- 13. Remove directory TRIAL.
- 14. Create a directory TEST using absolute pathname.
- 15. Using a single command change from current directory to home directory.
- 16. Remove a directory using absolute pathname.
- 17. Create files my file and your file under Present Working Directory.
- 18. Display the files my file and your file.
- 19. Append more lines in the my file and your file files.
- 20. How will you create a hidden file?.
- 21. Copy myfile file to emp.
- 22. Write the command to create alias name for a file.
- 23. Move yourfile file to dept.
- 24. Copy emp file and dept file to TRIAL directory
- 25. Compare a file with itself.
- 26. Compare myfile file and emp file.

UNIT-2

20 Hours

The Stream editor(sed):Line addressing, multiple instructions, context addressing, writing selected lines to a file, text editing ,substitution, basic regular expressions.

File Handling and Text Processing utilities: grep, egrep, fgrep.

AWK: sample awk filtering, splitting a line into fields, formatting output, variables and expressions, comparison operators, number processing, storing awk programs in a file, the BEGIN and END sections, Built in variables and arrays, control structures.

LIST OF EXPERIMENTS

1. A. Create the following file as sed.lab: unix is great os. unix is open source. unix is free os. learn operating system. Unix linux which one you choose. (Each sentence in a line)

- 1. Replace 'unix' with 'linux'.
- 2. Replace only the third (3rd) instance of 'unix' with 'linux'.
- 3. Try sed 's/unix/linux/g' sed.lab.
- 4. Replace 'unix' with 'linux' but only on line 3.
- 5. Add a new line, 'Actually Windows is best' after the second line.

B.

- 1. Viewing a range of lines of a document
- 2. Viewing the entire file except a given range
- 3. Viewing non-consecutive lines and ranges
- 4. Replacing words or characters inside a range
- 5. Using regular expressions
- 6. Viewing lines containing with a given pattern
- 7. Inserting spaces in files
- 8. Performing two or more substitutions at once

C.

(Autonomous)

DEPARTMENT OF COMPUTER SCIENCE AND ENGINEERING

- 1. Design a command "wishme" that will great you "good morning", "good Afternoon", according to current time.
- 2. Design a command "fags" thats will list the files and their ages, to date.
- 3. Design a command "word-freq" that will print the words and number of Occurrences of that word in the given text.

UNIT-3 20 Hours

Shell programming: shell, functions of shell, metacharacters, input redirections and output redirections, pipes, shell as a programming language, shell variables, predefined local variables, predefined environment variables, arithmetic and conditional expressions, control structures, positional parameters, passing command line arguments, built in shell commands, shell programs, functions and arrays.

LIST OF EXPERIMENTS

1.

- A. Design a command "which" that prints the path of the command given as Argument
- B. Design a command "filelist[-c <char>]" which prints all file names beginning with The charter specified as argument to the command, if the position is not specified It should print all the file names.
- C. Design a command **getline**[-f < filename> -n < line number>] which prints the line number lineno in the file specified with -f option. If the line number is not specified it should list all the lines in the given file
- D. Design a command **monthly-file[-m < month>]** which list the files created in a given month where month is argument to be command. If the options is not specified it list the files in all the months.

2.

- A. Design a command **list lines**[-f <file name> -v <varname>] which prints the line from the given file **file name**, which containing the variable **varname**.if **arname** Is not specified it should list ,all the lines.
- B. Design a command **avg[-n <colon> -f <file name>]** which prints the average of the given column in a file where **colon** and **file name** are arguments to the commands

UNIT-4 20 Hours

File management System calls: Regular File management system calls: open(), read(), write(), lseek(), close(), unlink(), stat(), getdents().

LIST OF EXPERIMENTS

- 1. Write a C program to copy data from source file to destination file, where the file names are provided as command-line arguments.
- 2. Write a C program that reads every 100th byte from the file, where the file name is given as command-line argument.
- 3. Write a C program to display information of a given file which determines the type of file and inode information, where the file name is given as command-line arguments.

DEPARTMENT OF COMPUTER SCIENCE AND ENGINEERING

Data Structures Lab											
II B. Tech. – III Semester (Code: 20CSL302/CC07)											
Practicals	:	3 Hours/Week	Continuous Assessment	:	30						
Final Exam	:	3 hours	Final Exam Marks	:	70						

Pre-Requisite: None.

Course Objectives: Students will be able to

- Understand and program basic data structures like arrays and linked lists with their applications.
- Understand and Program data structures like stacks and queues with their applications.
 Understand and implement sorting algorithms.
- Understand and program on trees, binary trees, binary search trees, avl trees, expression trees and their traversal methods.
- Understand and program on priority queues, hashing and their mechanisms. Basic knowledge of graphs representations and traversing methods.

Course Outcomes: Students will be able to								
CO1	Apply programming techniques using pointers,DMA and structures to implement SLL and DLL.							
CO2	Design and implement ADTs of stack, queue and its applications.							
CO3	Analyze and implement different sorting techniques.							
CO4	Analyze and implement BST,AVL tree and priority queue.							

Mapping of Course Outcomes with Program Outcomes & Program Specific Outcomes

		POs											PSOs			
CO	1	2	3	4	5	6	7	8	9	10	11	12	1	2	3

CO2	3	3	3	-	3	-	-	2	-	2	-	3	3	3	3	
CO3	3	3	3	-	3	-	-	2	-	2	-	3	3	3	3	
CO4	3	3	3	-	3	-	-	2	-	2	-	3	3	3	3	

LIST OF EXPERIMENTS

- 1. Write a program to perform the following operations on Array List
 - a). Creation, b). Insertion, c). Deletion, d). Search, e). Display.
- 2. Write a program that reads two lists of elements, prints them, reverses them, prints the reverse list, sort the lists, print the sorted lists, merges the list, prints merge list using array list.
- 3. Write a program to perform the following operations on Single Linked List.
 - a). Creation, b). Insertion, c). Deletion, d). Search, e). Display.
- 4. Write a program to perform the following operations on Doubly Linked List.
 - a). Creation, b). Insertion, c). Deletion, d). Search, e). Display.
- 5. Write a program to perform addition and multiplication of two polynomials using single Linked List.
- 6. Write a program to convert the given infix expression into postfix expression using stack.
- 7. Write a program to evaluate the postfix expression using stack.
- 8. Write a program that performs Radix sort on a given set of elements using queue.

(Autonomous)

DEPARTMENT OF COMPUTER SCIENCE AND ENGINEERING

- 9. Write a program to read n numbers in an array. Redisplay the array list with elements being sorted in ascending order using the following techniques
 - a). Bubble Sort, b). Selection Sort, c). Insertion Sort, d). Shell Sort.
- 10. Write a program to perform Binary Search tree operations and traversals.
- 11. Write a program to implement AVL tree that interactively allows
 - a). Insertion, b). Deletion, c). Find min, d). Find max.
- 12. Write a program to read n numbers in an array. Redisplay the arraylist with elements being sorted in ascending order using Heap Sort.

Object Oriented Programming Lab										
II B.Tech – III Semester (Code: 20CSL303/CC08)										
Practicals	:	3 Hours/Week	Continuous Assessment	:	30					
Final Exam	:	3 hours	Final Exam Marks	:	70					

Pre-Requisite: None.

Course Objectives: Students will be able to

- Understand advantages of OO programming over procedural oriented programming, learn the basics of variables, operators, control statements, arrays, classes and objects.
- Understand, write and implement the following concepts: Inheritance, Interfaces, Packages, Strings and Collections.
- Understand and write programs on Exception Handling, I/O, and Multithreading.
- > Understand and implement applications using Applets, AWT, Swings and Events.

Course Outcomes: Students will be able to CO1 Implement OOP concepts using its advantages over structured programming. CO2 Develop and implement inheritance, polymorphism. CO3 Analyze Exception Handling, Multithreading, I/O. CO4 Create code for Event Handling, Applets, AWT and Swings.

Mappi	Mapping of Course Outcomes with Program Outcomes & Program Specific Outcomes

LIST OF EXPERIMENTS

- 1. Write a Java program to declare, initialize and accessing the elements of Single dimensional Arrays, Multidimensional Arrays.
- 2. Write a Java program to demonstrate recursion.
- 3. Write a Java program to demonstrate static member, static method and static block.
- 4. Write a Java program to demonstrate method overloading and method overriding using simple inheritance.
- 5. Write a Java program to demonstrate multiple inheritance using interfaces.
- 6. Write a Java program to demonstrate packages.
- 7. Write a Java program to demonstrate String class methods.
- 8. Write a Java program to create user defined exception class, use couple of built-in Exception classes.
- 9. Write a Java program to demonstrate inter-thread communication.
- 10. Write an Applet program to demonstrate passing parameters to Applet, Graphics, Color and Font classes.
- 11. Write a Java program to demonstrate handling Action events, Item events, Key events, Mouse events, Mouse Motion events.

12. Write a GUI application which uses the following AWT components Label, Text Field,							
Text Area, Checkbox, Checkbox Group, Button.							
13. Write a Gl	UI application using JTable, JTree, JCombo Box.

UNIT-1 8 hours

Human Values: Morals, Values and Ethics, Integrity, Work Ethics, Service and Learning, Civic Virtue, Respect for Others, Living Peacefully, Caring and Sharing, Honesty, Courage, Value Time, Cooperation, Commitment and Empathy, Spirituality, Character.

Engineering Ethics: History of Ethics, Engineering Ethics, Consensus and Controversy, Profession and Professionalism, Professional Roles of Engineers, Self Interest, Customs and Religion, Uses of Ethical Theories, Professional Ethics, Types of Inquiry, Kohlberg's Theory, Gilligan's Argument, Heinz's Dilemma.

Engineering as Social Experimentation: Comparison with Standard Experiments, Knowledge Gained, Conscientiousness, Relevant Information, Learning from the Past, Engineers as Managers, Consultants, and Leaders, Accountability, Roles of Codes, Codes and Experimental Nature of Engineering.

UNIT-2 8 hours

Engineers' Responsibility for Safety and Risk: Safety and Risk, Types of Risks, Safety and the Engineer, Designing for Safety, Risk-Benefit Analysis, Accidents.

(Autonomous) DEPARTMENT OF COMPUTER SCIENCE AND ENGINEERING

Responsibilities and Rights: Collegiality, Two Senses of Loyalty, Obligations of Loyalty, Misguided Loyalty, Professionalism and Loyalty, Professional Rights, Professional Responsibilities,

Conflict of Interest, Self-interest, Customs and Religion, Collective Bargaining, Confidentiality,								
Acceptance of Bribe	es/Gifts, Occupational Crimes, Whistle Blowing.	•						
UNIT-3 8 hours								
Global Issues: Gl	Global Issues: Globalization, Cross-cultural Issues, Environmental Ethics, Computer Ethics,							
Weapons Developm	ent, Ethics and Research, Analyzing Ethical Problems in Rese	earch, Intellectual						
Property Rights (IPI	Rs).							
Ethical Audit: Asj	Ethical Audit: Aspects of Project Realization, Ethical Audit Procedure, The Decision Makers,							
Variety of Interests, Formulation of the Brief, The Audit Statement, The Audit Reviews.								
UNIT-4 8 hours								
Case Studies: Bhop	oal Gas Tragedy, The Chernobyl Disaster.							
Appendix 1: Institu	tion of Engineers (India): Sample Codes of Ethics.							
Appendix 2 : ACM	Code of Ethics and Professional Conduct.							
Text Books:	"Professional Ethics & Human Values", M.GovindaRaj	an, S.Natarajan,						
	V.S.SenthilKumar, PHI Publications 2013.	-

UNIT-1 12 hours

Databases and Database Users: Introduction - An Example, Characteristics of the Database Approach, Actorson the Scene, Workers behind the Scene, Advantages of Using the DBMS Approach.

Database System Concepts and Architecture : DataModels, Schemas and Instances ,Three-SchemaArchitecture and Data Independence, Database Languages and Interfaces, The Database System Environment, Centralized and Client/Server Architectures for DBMSs.

Data Modeling Using the Entity-Relationship (ER) Model: Using High-Level Conceptual Data Models for Database Design, An Example Database Application, Entity Types, Entity Sets, Attributes, and Keys - Relationship Types, Relationship Sets, Roles, and Structural Constraints, Weak Entity Types, Refining the ER Design for the COMPANY Database - ER Diagrams, Naming Conventions, and Design Issues

UNIT-2 12 hours

(Autonomous)

DEPARTMENT OF COMPUTER SCIENCE AND ENGINEERING

The Relational Algebra and Relational Calculus: Unary Relational Operations: SELECT and PROJECT, Relational Algebra Operations from Set Theory, Binary Relational Operations: JOIN and DIVISION, The Tuple Relational Calculus, The Domain Relational Calculus.

Schema Definition, Constraints, Queries, and Views: SQL Data Definition and Data Types, Specifying Constraints in SQL, Schema Change Statements in SQL, Basic Queries in SQL,INSERT, DELETE, and UPDATE Statements in SQL, Views (Virtual Tables) in SQL

UNIT-3 12 hours

Indexing Structures for Files: Types of Single-Level Ordered Indexes, Multilevel Indexes - Dynamic Multilevel Indexes Using B+-Trees.

Functional Dependencies and Normalization for Relational Databases: Informal Design Guidelines for Relation Schemas, Functional Dependencies, Normal Forms Based on Primary Keys - General Definitions of Second and Third Normal Forms, Boyce-Codd Normal Form.

Relational Database Design Algorithms and Further Dependencies:Properties of Relational Decompositions -Lossless Join Decomposition and Dependency Preserving Decomposition, Multivalued Dependencies and Fourth Normal Form, Join Dependencies and Fifth Normal Form.

UNIT-4 12 hours

Introduction to Transaction Processing Concepts and Theory: Introduction to Transaction Processing, Transaction and System Concepts, Desirable Properties of Transactions, Characterizing Schedules Based on Recoverability, Characterizing Schedules Based on Serializability

Concurrency Control Techniques: Two-Phase Locking Techniques for Concurrency Control, Concurrency Control Based on Timestamp Ordering, Validation (Optimistic) Concurrency Control Techniques, Multiple Granularity.

Database Recovery Techniques :Recovery Techniques Based on Deferred Update, Recovery Techniques Based on Immediate Update, Shadow Paging.

Text Books:	Fundamentals of Database Systems, Ramez Elmasri and Navathe Pearson
	Education, 6thedition

		II B.Tech – III Semester (Co	de: 20CSL401/SOC2)		
Practicals	:	5 Hours/Week (2T+3P)	Continuous Assessment	:	30
Final Exam	:	3 hours	Final Exam Marks	:	70
Pre-Requisite:	None				
Course Objectiv	es: S	Students will be able to			
▶ Un	derst	and and write code using the	e basics of Python, Statements,	Expr	essions,
Co	nditic	onal Executions, and Functions.			
> Wr	ite co	de for Iteration, Strings, File I/	O.		
> Wr	ite co	ode in creating, usage of Lists, I	Dictionaries, and Tuples.		
Un	dersta	and the concepts of Object Orien	ntation, Databases and write code i	impler	nenting
the	m.	1 0	•	•	C

Course Ou	tcomes: Students will be able to
CO1	Identify the basic python constructs with a view of using them in problem solving.
CO2	Explore the usability of functions and strings in modular programming
CO3	Apply lists, dictionaries, tuples and file operations to organize the data in real world problems.
CO4	Implement the problems in terms of real world objects using object oriented and database concepts.

Mapping of Course Outcomes with Program Outcomes & Program Specific Outcomes

Introduction: Overview, History of Python, Python Features, Environment Setup. Variables, expressions, and statements: values and types, variables, names and keywords, statements, operators and operands, expressions, order of operations, modulus operator, string operations, asking the user for input, comments, choosing mnemonic variable names.

Conditional execution: Boolean expressions, logical operators, conditional execution,

Alternative execution, chained conditionals, nested conditionals, catching exceptions using try and except, short-circuit evaluation of logical expressions.

Functions: function calls, built-in functions, type conversion functions, random numbers, math functions, adding new functions, definitions and uses, flow of execution, parameters and arguments, fruitful functions and void functions.

Iteration: updating variables, the while statement, infinite loops and break, finishing iterations with continue, definite loops using for, loop patterns.

Strings: string is a sequence, getting the length of a string using len, traversal through a string with a loop, string slices, strings are immutable, looping and counting, the in operator, string comparison, string methods, parsing strings, format operator.

Files I/O: persistence, opening files, text files and lines, reading files, searching through a file, letting the user choose the file name, using try except and open, writing files.

Section 1

BAPATLA ENGINEERING COLLEGE:: BAPATLA

(Autonomous)

DEPARTMENT OF COMPUTER SCIENCE AND ENGINEERING

Lists: a list is a sequence, lists are mutable, traversing, operations, slices, methods, deleting elements, functions, strings, parsing lines, objects and values, aliasing, arguments.

Dictionaries: dictionary as a set of counters, dictionaries and files, looping and dictionaries, advanced text parsing.

Tuples: tuples are immutable, comparing tuples, tuple assignment, dictionaries and tuples, multiple assignment with dictionaries, the most common words, using tuples as keys in dictionaries, sequences.

Object-Oriented Programming: Managing Larger Programs, Using Objects, starting with Programs, Subdividing a Problem–Encapsulation, First Python Object, Classes as Types, Object Lifecycle, Many Instances, Inheritance.

Using Databases and SQL: Database concepts, Database Browser for SQLite, creating a database table, Structured Query Language summary, Basic data modeling, Programming with multiple tables, three kinds of keys, Using JOIN to retrieve data.

LIST OF EXPERIMENTS

- 1. Write a python program to check if the number is positive or negative or zero and display an appropriate message.
- 2. Write a python program to take a string from user and count number of vowels present and percentage of vowels in it.
- 3. Write a python program to find the most frequent words in a text file.
- 4. Write a Python Program to Find the Sum of first n Natural Numbers.
- 5. Write a python program to find the numbers which are divisible by 7 and multiple of 5 between 1500 and 2700.
- 6. Write a Python Program to solve Quadratic Equation.
- 7. Create a program that ask the user for a number and then prints out a list of all the divisors of that number.
- 8. Write a Python Program to Find HCF or GCD.
- 9. Write a Python Program to Find LCM.
- 10. Write a Python program to construct the following pattern, using a nested loop number.

- 11. Write a Python Program to sort the given words in Alphabetic Order.
- 12. Write a Python function to create the HTML string with tags around the word(s).
- 13. Write a Python program to reverse words in a string.
- 14. Write a Python program to strip a set of characters from a string.
- 15. Write a python function to find the maximum and minimum of a list of numbers.
- 16. Write a Python Program to Find the Square Root.
- 17. Write a Python Program to Convert Decimal to Binary Using Recursion.
- 18. Write a python recursive function to a find the factorial of a given number.
- 19. Write a python program to find the longest word in each line of given file.
- 20. Write a Python program to combine each line from first file with the corresponding line in second file.
- 21. Write a Python program to read a random line from a file.
- 23. Write a Python program to split a list every Nth element.

Sample list: ['a', 'b', 'c', 'd', 'e', 'f', 'g', 'h', 'i', 'j', 'k', 'l', 'm', 'n']

Expected Output: [['a', 'd', 'g', 'j', 'm'], ['b', 'e', 'h', 'k', 'n'], ['c', 'f', 'i', 'l']]

24. Write a Python program to compute the similarity between two lists.

(Autonomous)

DEPARTMENT OF COMPUTER SCIENCE AND ENGINEERING

```
["red", "orange", "green",
                                                          "blue", "white"], ["black",
           Sample data:
           "green", "blue"]
          Expected Output:
          Color1-Color2: ['white', 'orange', 'red'] Color2-Color1: ['black', 'yellow']
25. Write a Python program to replace the last element in a list with another list.
          Sample data: [1, 3, 5, 7, 9, 10], [2, 4, 6,8] Expected Output: [1, 3, 5, 7, 9, 2, 4, 6, 8]
26. Write a Python program to find the repeated items of a tuple.
27. Write a Python program to convert a list with duplicates to a tuple without duplicates.
28. Write a Python program to reverse the elements of a tuple.
29. Write a Python program to replace last value of tuples in a list.
           Sample list: [(10, 20, 40), (40, 50, 60), (70, 80, 90)]
           Expected Output: [(10, 20, 100), (40, 50, 100), (70, 80, 100)]
31. Write a Python program to combine two dictionaries by adding values for common keys.
          d1 = \{'a': 100, 'b': 200, 'c': 300\}
          d2 = \{'a': 300, 'b': 200, 'd': 400\}
          Sample output: Counter({'a': 400, 'b': 400, 'd': 400, 'c': 300})
33. Write a Python program to create and display all combinations of letters, selecting each letter
from a different key in a dictionary.
          Sample data: {'1':['a','b'], '2':['c','d']} Expected Output:
          ac ad bc bd
34. Write a Python program to get the top three items in a shop.
           Sample data: {'item1': 45.50, 'item2':35, 'item3': 41.30, 'item4':55, 'item5': 24} Expected
          Output:
           item4 55 item1 45.5
          item3 41.3
35. Write a Python program to match both key values in two dictionaries.
           Sample dictionary: {'key1': 1, 'key2': 3, 'key3': 2}, {'key1': 1, 'key2': 2}
          Expected output: key1: 1 is present in both x and y
36. Write a Python class named Rectangle constructed by a length and width and a method which
will compute the area of a rectangle.
37. Write a Python class named Circle constructed by a radius and two methods which will compute
the area and the perimeter of a circle.
38. Write a Python program to create a Single Linked List using classes.
39. Write a Python program to create a FIFO queue using classes.
40. Predict the output of following Python programs and write the justification. class X(object):
            def init (self.a):
               self.num = a
            def doubleup(self):
               self.num *= 2
          class Y(X):
             def init (self,a): X. init (self, a)
            def tripleup(self):
               self.num *= 3
          obj = Y(4)
          print(obj.num)
          obj.doubleup()
```

print(obj.num)

(Autonomous)

DEPARTMENT OF COMPUTER SCIENCE AND ENGINEERING

```
obj.tripleup()
          print(obj.num)
41. Predict the output of following Python programs and write the justification.
          # Base or Super class class Person(object):
            def init (self, name):
              self.name = name
            def getName(self):
              return self.name
            def isEmployee(self):
              return False
          # Inherited or Subclass (Note Person in bracket)
          class Employee(Person):
           def init (self, name, eid):
           "In Python 3.0+, "super().__init__(name)" also works"
              super(Employee, self).__init__(name)
              self.empID = eid
            def isEmployee(self):
              return True
            def getID(self):
              return self.empID
          # Driver code
          emp = Employee("Geek1", "E101")
          print(emp.getName(), emp.isEmployee(), emp.getID())
42. Create a employees database with the following attributes and insert rows. employee id,
first name, last name, email, phone number, hire date, job id, salary, commission pct,
manager id, department id
43. Write a query to get the highest, lowest, sum, and average salary of all employees.
44. Write a query to get the average salary for all departments employing more than 10 employees.
45. Write a query to find the names (first name, last name), the salary of the employees
whose salary is greater than the average salary.
46. Write a query to get nth max salaries of employees.

- 6. Demonstrate browser objects.
- 7. Demonstrate Document Object Model for an HTML document.
- 8. Write well-formed and valid XML documents.
- 9. Write code for converting XML document to HTML using XSLT.
- 10. Build a webpage using JQuery and its components.

Text Books:	Kogent Learning Solutions Inc.,HTML5 BlackBook: Covers CSS3, Javascript, XML, XHTML, Ajax, PHP and Jquery.
References:	1. Harvey M. Deitel and Paul J.Deitel, "Internet &World Wide Web How to
	Program", 4/e, Pearson Education.

RDBMS Lab									
		II B.Tech – IV Semester (Code: 2	20CSL403/CC13)						
Practicals	:	3 Hours/Week	Continuous Assessment	:	30				
Final Exam	:	3 hours	Final Exam Marks	:	70				

Pre-Requisite: None.

Course Objectives: Students will be able to

- Analyze the student on database languages.
- Interpret the Knowledge on database design.
- Determine the knowledge on key constraints and Normalization.
- Determine the knowledge on procedures and functions.

Course Outcomes: Students will be able to:

CO1	Design database by using ER Diagrams
CO2	Implement DDL, DML, DCL Commands using SQL.
CO3	Apply key constrains to get a normalized database.
CO4	Implement procedures and functions using PL/SQL

Mapping of Course Outcomes with Program Outcomes & Program Specific Outcomes

		POs											PSOs		
CO	1	2	3	4	5	6	7	8	9	10	11	12	1	2	3
CO1	3	3	3	3	3	-	-	2	-	2	-	3	3	3	3
CO2	3	3	3	3	3	-	-	2	-	2	-	3	3	3	3
CO3	3	3	3	3	3	-	-	2	-	2	-	3	3	3	3
CO4	3	3	3	3	3	-	-	2	-	2	-	3	3	3	3

LIST OF EXPERIMENTS

Experiment 1: Working with ER Diagram

Example: ER Diagram for Sailors Database

Entities:

- 4. Sailor
- 5. Boat Relationship:

Reserves

Primary Key Atributes:

- 1. SID (Sailor Entity)
- 2. BID (Boat Entity)

Experiment 2: Working with DDL, DML, DCL and Key Constraints

Creation, Altering and Dropping of Tables and Inserting Rows into a Table (Use Constraints While Creating Tables) Examples Using Select Command.

Experiment 3: Working with Queries and Nested QUERIES

(Autonomous)

DEPARTMENT OF COMPUTER SCIENCE AND ENGINEERING

Queries (along with sub Queries) using ANY, ALL, IN, EXISTS, NOTEXISTS, UNION, INTERSET, Constraints

Expriment 4: Working with Queries USING Aggregate Operators & views

Queries using Aggregate Functions (COUNT, SUM, AVG, MAX and MIN), GROUP BY, HAVING and Creation and Dropping of Views

Experiment 5: Working with Conversion Functions & String Functions

Queries using Conversion Functions (TO_CHAR, TO_NUMBER AND TO_DATE), String Functions (CONCATENATION, LPAD, RPAD, LTRIM, RTRIM, LOWER, UPPER, INITCAP, LENGTH, SUBSTR AND INSTR), Date Functions (SYSDATE, NEXT_DAY, ADD_MONTHS, LAST_DAY, MONTHS_BETWEEN), LEAST, GREATEST, TRUNC, ROUND, TO_CHAR, TO DATE

Experiment 6: Working with LOOPS using PL/SQL

Program Development using WHILE LOOPS, FOR LOOPS, Nested Loops using ERROR Handling.

Experiment 7: Working with Functions Using PL/SQL

Program Development using Creation of Stored Functions, Invoke Functions in SQL Statements and Write Complex Functions.

Experiment 8: Working with Stored Procedures

Programs Development using Creation of Procedures, Passing Parameters IN and OUT of

PROCEDURES

Experiment 9: Working with CURSORS

Develop Programs using Features Parameters in a CURSOR, FOR UPDATE CURSOR, WHERE CURRENT of Clause and CURSOR Variables.

Experiment 10: Working with Triggers using PL/SQL

Develop Programs using BEFORE and AFTER Triggers, Row and Statement Triggers and INSTEAD OF Triggers

Text Books:	1. Oracle PL/SQL by Example, Benjamin Rosenzweig, Elena Silvestrova,
	Pearson Education 3rdEd
	2. Oracle Database Logic PL/SQL Programming, ScottUrman, TataMc-Graw
	Hill.
	3. SQL and PL/SQL for Oracle 10g, Black Book, Dr.P.S.Deshpande

Automata: Why Study Automata Theory, The central concepts of automata theory - Alphabets, Strings, Languages, Problems.

Finite Automata: An Informal picture of finite automata, Deterministic finite automata (DFA) - Definition of DFA, DFA processing strings, Notations for DFA, Extended transition function, the language of DFA, Non deterministic finite automata (NFA) – Definition of NFA, Extended transition function, the language of NFA, Equivalence of DFA and NFA.

Automata with \epsilon transitions: Use of ϵ - transition, notation for an ϵ - NFA, Epsilon closures, extended transitions and languages, Eliminating ϵ - transitions.

UNIT-2	12 Hours

(Autonomous)

DEPARTMENT OF COMPUTER SCIENCE AND ENGINEERING

Regular Expressions and Languages: Regular expressions, finite automata and regular expressions, Algebraic laws of regular expressions.

Properties of Regular Languages: Proving languages are not regular – Pumping lemma for regular languages, Applications of the pumping lemma, Closure Properties of Regular Languages, Equivalence and minimization of automata – Minimization of DFA.

UNIT-3 12 Hours

(Construction based treatment & proofs are excluded)

Context Free Grammars: Context Free Grammars, Parse Trees, ambiguous grammars. **Pushdown Automata:** Definition of the Pushdown automata, the languages of PDA, Equivalences of PDA's and CFG's.

Context free languages: Normal form's for context- Free grammars, the pumping lemma for context free languages.

UNIT-4 12 Hours

Properties of Context free languages: closure properties for context free languages, Decision properties for CFL's.

Introduction to Turing Machines: The Turing Machine, programming techniques for Turing machines.

Undecidability: a language that is not recursively enumerable, an undecidable problem that is RE, Undecidability problems about TM, Post's Correspondence problem.

Computer Networks								
		III B. Tech. – V Semeste	er (Code: 20CS502/CC15)					
Lectures	:	3 Hours/Week	Continuous Assessment	:	30			
Final Exam	:	3 hours	Final Exam Marks	:	70			

Pre-Requisite: Operating Systems (20CS304)

Course Objectives: Students will be able to

- Understand the basic concepts of data communication, layered model, protocols and OSI&TCP layers
- Understand the basic concepts of Data Link control, Network Layer Design Issues, Routing Algorithms & Congestion.
- Understand the basic concepts of Quality of service, Network Layer & Transport Layer
- Understand the basic concepts of TCP, UDP & Application Layer

Course	Course Outcomes: Students will be able to							
CO1	Understand the fundamentals of networks,network reference models and various							
COI	error coeerection and detection techniques in data communication.							
CO2	Analyze error control, flow control mechanisms used at data link layer and various							
CO2	routing and congestion control protocols in network design.							
CO3	Understand the basic principles of OPV4 and its addressing mechanisms, elements							
COS	of transport protocols in transport layer.							
CO4	Analyze the underlying protocols in transport layer and application layer.							

Mapping of Course Outcomes with Program Outcomes & Program Specific Outcomes

						P	Os							PSO s	S
CO	1	2	3	4	5	6	7	8	9	10	11	12	1	2	3
CO1	3	3	3	-	-	-	-	-	-	-	-	-	3	-	3

CO3	3	3	3	-	-	-	1	•	-	-	-	-	3	ı	3
CO4	3	3	3	-	-	-	-	-	-	-	-	-	3	-	3

UNIT-1 12 Hours

Data Communications & Networking Overview: A Communications Model, Data Communications, Data Communication Networking.

Protocol Architecture: The Need for a Protocol Architecture, A Simple Protocol Architecture, OSI, The TCP/IP Protocol Architecture.

Digital Data Communication Techniques: Asynchronous & Synchronous Transmission, Types of Errors, Error Detection, Error Correction.

UNIT-2 12 Hours

DATA Link Control: Flow Control, Error Control.

Network Layer: Network Layer Design Issues: Store-and-Forward Packet Switching, Services Provided to the Transport Layer, Implementation of Connectionless Service, Implementation of Connection-Oriented Service, Comparison of Virtual-Circuit & Datagram Subnets.

(Autonomous)

DEPARTMENT OF COMPUTER SCIENCE AND ENGINEERING

Routing Algorithms: The Optimality Principle, Shortest Path Routing, Flooding, Distance Vector Routing, Link State Routing, Hierarchical Routing.

Congestion Control Algorithms: General Principles of Congestion Control, Congestion Prevention Policies, Congestion Control in Virtual-Circuit Subnets, Congestion Control in Datagram Subnets, Load Shedding, Jitter Control.

UNIT-3 12 Hours

Quality of Service: Requirements, Techniques for Achieving Good Quality of Service The Network Layer in the Internet: The IP Protocol, IP Addresses, Internet Control Protocols. The **Transport Layer, The Transport Service:** Services Provided to the Upper Layers, Transport Service Primitives, Berkeley sockets

Elements of Transport Protocols: Addressing, Connection Establishment, Connection Release, Flow Control and Buffering, Multiplexing, Crash Recovery.

UNIT-4 12 Hours

The Internet Transport Protocol (UDP): Introduction to UDP, Remote Procedure Call, The Real-Time Transport Protocol.

The Internet Transport Protocols (TCP): Introduction to TCP, The TCP Service Model, The TCP Protocol, The TCP Segment Header, TCP Connection Establishment, TCP Connection Release, Modeling TCP Connection Management, TCP Transmission Policy, TCP Congestion Control, TCP Timer Management.

Application Layer: The Domain Name System (DNS): The DNS Name Space, Resource Records, Name Servers.

INTRODUCTION TO SOFTWARE ENGINEERING: The Evolving Role of Software, Software, the Changing Nature of Software, Legacy Software, Software Myths.

A GENERIC VIEW OF PROCESS: Software Engineering - A Layered Technology, a Process Framework, the CMMI, Process Patterns, Process Assessment, Personal and Team Process Models, Product and Process.

PROCESS MODELS: Prescriptive Models, the Waterfall Model, Incremental Process Models, Evolutionary Models, the Unified Process.

UNIT-2 12 Hours

AN AGILE VIEW OF PROCESS: What Is Agility? , What Is an Agile Process? , Agile Process Models.

REQUIREMENTS ENGINEERING: A Bridge To Design and Construction, Requirements Engineering Tasks, Initiating the Requirements Engineering Process, Eliciting Requirements, Developing Use-cases, Building the Analysis Model, Negotiating Requirements, Validating Requirements.

(Autonomous)

DEPARTMENT OF COMPUTER SCIENCE AND ENGINEERING

BUILDING THE ANALYSIS MODEL: Requirements Analysis, Analysis Modeling Approaches, Data Modeling Concepts, Flow-Oriented Modeling, Class Based Modeling Creating a Behavioral Model.

UNIT-3 12 Hours

DESIGN ENGINEERING: Design within the Context of Software Engineering, Design Process and Design Quality, Design Concepts The Design Model, Pattern Based Software Design.

CREATING AN ARCHITECTURAL DESIGN: Software Architecture, Data Design, Architectural Styles and Patterns, Architectural Design, Assessing Alternative Architectural Designs.

MODELING COMPONENT-LEVEL DESIGN: What Is a Component? , Designing Class-Based Components, Conducting Component-Level Design, Designing Conventional Components.

PERFORMING USER INTERFACE DESIGN: The Golden Rules, User Interface Analysis and Design, Interface Analysis, Interface Design Steps, Design Evaluation.

UNIT-4 12 Hours

SOFTWARE PROCESS AND PROJECT METRICS: Introduction: Metrics Process and Project Domains, Software Measurement, Metrics for Software Quality, Integrating Metrics with Process.

SOFTWARE QUALITY ASSURANCE: Quality Concepts, Quality Movement, SQA, Software Reviews, Formal Technical Reviews, Formal Approaches to SQA, Software Reliability, ISO 9000 Quality Standards, SQA Plan.

SOFTWARE TESTING STRATEGIES: Strategic Approach, Strategic Issues, Test strategies for Conventional Software, White box testing, Black Box testing, Test strategies for Object Oriented Software, Validation Testing, System Testing, The Art of Debugging.

UNIT-1 12 Hours

Introduction to AI: What is AI?, Foundations of AI, History of AI, State of the Art. Intelligent Agents: Agents and Environments, Good Behavior: Concept of Rationality, The Nature of Environments And The Structure of Agents. Solving Problems by Searching: Problem Solving Agents, Searching for Solutions, Uninformed Search Strategies: Breadth First Search, Uniform Cost Search, Depth First Search, Iterative Deepening DFS and Bi-directional Search. Informed (Heuristics) Search Strategies: Greedy BFS, A* Algorithm, AND-OR Search trees, Constraint Satisfaction Problems: Defining Constraint Satisfaction Problems, Local Search in CSP.

> **UNIT-2** 12 Hours

Logical Agents: Knowledge Based Agents, The Wumpus World, Logic and Propositional Logic, Propositional Theorem Proving: Inference and proofs, Proof by resolution, Horn clauses and definite clauses, Forward and Backward chaining. First Order Logic: Representation, Revisited Syntax and Semantics of First Order Logic, Using First Order Logic, Knowledge Engineering in First Order Logic. Inferences in First Order Logic: Propositional vs. First Order Inference, Unification and Lifting, Forward Chaining, Backward Chaining, Resolution.

	UNIT-3	12 Hours
Knowledge R	Representation: Ontological Engineering, Categories and	Objects, Events,
Mental Events	and Mental Objects, Reasoning Systems for Categories, Reasoning Systems	oning with Default
Information.		
Slot and Fille	er Structures: Semantic Nets, Conceptual Dependency, S	cripts. Planning:
Overview - An	Example Domain, The Blocks World, Component of Planni	ng Systems, Goal
Stack Planning	, Hierarchical planning, Reactive systems.	
	UNIT-4	12 Hours
Learning: Into	roduction to learning, Rote learning, Learning by taking ad	vice, Learning in
problem solvin	g, Learning from examples, Induction Learning, Explanation	n Based Learning.
Expert Syste	ms: Representing and using domain knowledge, Exper	rt system shells,
Explanation, K	nowledge Acquisition.	
Text Books:	1. Stuart Russel and Peter Norvig, Artificial Intelliger	nce – A Modern

DEPARTMENT OF COMPUTER SCIENCE AND ENGINEERING

Dynamic Web Pages - JSP: JSP Runtime Architecture, JSP Syntax, The Java Environment for JSPs, JSP Standard Tags, Custom Tag Libraries, Expression Language.

Assembling Dynamic Web Pages - JavaServer Faces: Architecture of a JSF Application, JavaServer Faces Tags, Java EE Managed Beans, f: Core Tags, JSTL Core Tags, Extensibility and Modularity.

UNIT-3 12 Hours

Web Sites for Non-browsers - JAX-RS: What Are RESTful Web Services, The Java API for RESTful Web Services, Deploying JAX-RS Resources, Content Production, Content Consumption, Accessing Web Service Context, Exception Mapping, Number of Instances of Resource Classes, Path Mapping.

JSON Processing: Streaming API: Consuming JSON Using the Streaming API, Producing JSON Using the Streaming API; **Object Model API:** Consuming JSON Using the Object Model API, Producing JSON Using the Object Model API.

Adding Sparkle - Java WebSockets: Introduction to the WebSocket Protocol, The WebSocket Lifecycle, Overview of the Java WebSocket API, Java WebSocket Encoders and Decoders, Message Processing Modes, Path Mapping, Deployment of Server Endpoints.

UNIT-4 12 Hours

The Fundamentals of Enterprise Beans: Introduction to Enterprise Beans, Hello Enterprise Beans, Flavors of Enterprise Beans, Exposing Enterprise Beans, Finding Enterprise Beans, EJB Lifecycle, Packaging Enterprise Beans.

Advanced Thinking with Enterprise Beans: Multi-threading and Enterprise Beans, Asynchronous Enterprise Beans, Enterprise Bean Contexts, The Timer Service, Transactions and Enterprise Beans, Interceptors.

Modern Memories - The Java Persistence API: Persistence Entities, The Entity Manager, Java Persistence Query Language, Configuring JPA Applications.

Text Books :	 Dr. Danny Coward, "Java EE 7: The Big Picture", oracle press. Arun Gupta "Java EE 7 Essentials" O'Reilly.

The .NET Framework: C#, VB, and the .NET Languages, Intermediate languages, Common language runtime, the .NET class library.

Web Form Fundamentals: Understanding the anatomy of an ASP.NET application, Introducing server controls, improving the currency converter, taking a deeper Look at HTML control classes, using the page class, using Application events.

Web Controls: Stepping up to web controls, web control classes, List controls, Table controls, Web control events and AutoPostBack, An interactive web page.

Tracing: Enabling Tracing, Writing Trace Information, Performing Application-Level Tracing.

UNIT-II 12 Hours

State Management: Understanding the problem of the state, using View State, Transferring information between pages, using cookies, managing session state Configuring session state, using application state

Validation: understanding the validation, using the validation controls.

Rich Controls: The calendar, The Ad Rotator, pages with multiple views: Multiview, Wizard Control

Styles, Themes, and Master Pages: Styles, Themes, master page basics, advanced master pages.

(Autonomous)

DEPARTMENT OF COMPUTER SCIENCE AND ENGINEERING

UNIT-III 12 Hours

ADO.NET Fundamentals: Understanding databases, configuring your database, Understanding SQL basics, Understanding the data provider model, using direct data Access, using disconnected data access.

Data Binding: Introducing data binding, using single valued data binding, using repeated value data binding, working with data source controls.

The Data Controls: The grid view, formatting the gridview, selecting a grid view row, Editing with a grid view row, sorting and paging in gridview, using grid view templates The details view and form view.

UNIT-IV 12 Hours

LINQ and the Entity Framework: understanding LINQ, LINQ basics, using entity framework, Getting more advanced with entity framework, using the entity data source.

Working with Services: What is WCF Web Service, Application for Creating and Consuming a WCF Web Service?

Putting ASP.NET MVC in Context: Understanding the history of ASP.NET, Key Benefits of ASP.NET MVC.

Your First MVC Application: Preparing Visual Studio, Creating a new ASP.NET MVC Project, Rendering Web Page, Creating a simple Data Entry Application.

Project, Render	ring web Page, Creating a simple Data Entry Application.

	Software Engineering Lab												
	III B.Tech – V Semester(Code: 20CSL502)												
Practicals	:	3 Hours/Week	Continuous Assessment	:	30								
Final Exam	:	3 Hours	Final Exam Marks	:	70								
		<u> </u>	·										

Pre-Requisite: None.

Course Objectives: Students will be able to

- Able to prepare problem statement and SRS (software requirements specification) document.
- Able to develop various analysis modeling diagrams.(use-case, activity, class etc.)
- Able to develop various design representations (component diagrams and deployment diagrams)
- Able to perform various testing techniques (black box and white box)

Course Ou	tcomes: Students will be able to
CO1	Prepare SRS document.
CO2	Develop various analysis modeling representations using StarUML tool.
CO3	Develop various design representations using StarUML tool.
CO4	Perform various testing strategies on code.

Mapping of	Mapping of Course Outcomes with Program Outcomes & Program Specific Outcomes

Lab	Lab : 3 Hours/Week Continuous Assessment : 30												
Final Exam	:	3 Hours	Final Exam Marks	:	70								

Pre-Requisite: None.

Course Objectives: The student will be able to

- Comprehend the prevalence of data and evolution of data visualization
- ► Handle data from various sources.
- Process data and missing values
- ➤ Plot various types of charts, graphs for data visualization

Course (Outcomes: Students will be able to
CO1	Understand eras of data evolution and GESTALT's principles of visual perception.
CO2	Reading data from different data file formats using Python, Pandas package.
CO3	Perform filtering, reshaping, merging, sub-setting and filling null values using Pandas.
CO4	Draw scatter plot, pie charts, bar charts, bubble charts, distplots, swamplots, using matplotlib, plotly and Seaborn.

LIST OF EXPERIMENTS

Tool Required: Python with Pandas, Matplotlib, Plotly and Seaborn

LIST OF EXPERIMENTS

- 1. Write code to read data from text file, CSV file, Excel file and JSON file into a dataframe. Print the overview of data and slice data using different indexing/slicing methods.
- 2. Write code to read data with null values from a source file and process null values in various ways of filling and dropping null values.
- 3. a) Create multiple series objects and create a dataframe with column names and indexing from series objects. Use different parameters of DataFrame method.
 - b) Write code to read data from a XML file and Microsoft Access Database.
- 4. Read data into a dataframe and apply Groupby, aggragation, nested groups, looping over groups operations.
- 5. Using Matplotlib package, draw the following.

(Autonomous)

DEPARTMENT OF COMPUTER SCIENCE AND ENGINEERING

- a) Scatter Plot b) Bar Plot c) Pie Chart d) Histogram e) Box Plot
- 6. Using Matplotlib package, draw the following.
 - a) Treemap b) Heat Map c) Waterfall Chart d) Bubble Chart
- 7. Using plotly package, draw the following.
 - a) Scatter Plot b) Bar Plot c) Pie Chart d) Histogram e) Box Plot
- 8. Using plotly package, draw the following.
 - a) Word Cloud b) Treemap c) Choropleth Chart d) Area Chart e) Bubble chart f) Violin Plot
- 9. Using Seaborn package, draw the following.
 - a) Scatter Plot b) Strip Plot c) Swarm Plot d) Count Plot e) Box Plot.
- 10. Using Seaborn package, draw the following.
 - a) Pair Plot b) Cat Plot c) Count Plot d) Implot Plot e) DistPlot.

Case Study: Perform Exploratory Data Analysis on a dataset of your choice.

	Compiler Design									
		III B. Tech. – VI Semester (Code	e: 20CS601/CC18)							
Lectures	:	3 Hours/Week	Continuous Assessment	:	30					
Final Exam	:	3 hours	Final Exam Marks	:	70					

Pre-Requisite: Automata Theory & Formal Languages (20CS501)

Course Objectives: Students will be able to

- To comprehend the principles involved in the design and construction of compilers, the algorithms involved in the design and construction of compilers, Understand the design of lexical analyzer.
- To practice Various Bottom up parsing techniques.
- To apply Various Intermediate languages. To understand Code generation algorithm
- Various storage allocation strategies, Various Symbol table data structures.

Course	Course Outcomes: Students will be able to								
CO1	Comprehend the ideas of compiler design and construction, as well as the algorithms								
COI	underlying these processes, Recognize the lexical analyzer's layout.								
CO2	Practice different Bottom-up parsing methods.								
СОЗ	Implement a number of intermediate languages. in order to comprehend the code generating algorithm.								
CO4	Illustrate the Various storage allocation strategies and Symbol table data structures.								

Mapping of Course Outcomes with Program Outcomes & Program Specific Outcomes

>	Apply	an	Unsupervised Learning Model.	_					
Course	Outcon	nes	Students will be able to						
CO1	1		nd a very broad collection of machin tregression model for the given pro	0 0 1	ns and	l apply			
CO2	Analyze the supervised discriminative and generate models for the given problem and implement it.								
CO3	Identif	fy tl	ne supervised strong learning model	for the given problem and im	pleme	nt it.			
CO4	Learn the basics of the learning problem with hypothesis, version spaces and choose the correct clustering algorithm for the given problem and implement it.

CO4	3	3	3	3	3	-	-	-	-	-	-	2	3	3	3	

UNIT-1 12 Hours

Machine learning basics: What is machine learning? Key terminology, Types of Machine Learning Systems, how to choose the right algorithm, Steps in developing a machine learning application, Main Challenges of Machine Learning Essential Python Libraries: Scikit-learn, NumPy, matplotlib, Pandas. A First Application: Classifying iris species using Sci-kit learn.

Linear Regression: Simple linear regression. Optimization of model parameters using Batch gradient decent algorithm, Mini batch gradient decent algorithm and Stochastic gradient descent algorithm, Multiple linear regression, locally weighted linear regression, Polynomial Regression. Regularized Linear Models- Ridge Regression and Lasso Regression

Regularization: Bios Variance tradeoff, L1 and L2 regularization.

UNIT-2 12 Hours

Generative Classifiers: Classifying with Bayesian decision theory, Bayes' rule, Naïve Bayes classifier.

Discriminative Classifiers: Logistic Regression, Decision Trees: Training and Visualizing a Decision Tree, Making Predictions, Estimating Class Probabilities, The CART Training Algorithm,

(Autonomous)

DEPARTMENT OF COMPUTER SCIENCE AND ENGINEERING

Attribute selection measures- Gini impurity; Entropy, Regularization Hyperparameters, Regression Trees, Linear Support vector machines. UNIT-3 12 Hours Evaluation of a Classifier: Measuring Accuracy Using Cross-Validation, Confusion Matrix, Precision and Recall, Precision/Recall Trade-off, The ROC Curve. Ensemble Learning: Voting Classifiers, Bagging and Pasting, Random Forests, Boosting-AdaBoost and Gradient Boosting. UNIT-4 12 Hours Computational Learning Theory: Introduction, probably learning an approximately correct hypothesis, sample complexity for finite hypothesis spaces. **Instance-based Learning:** Introduction, K-nearest neighbors. Unsupervised Learning: K-means clustering algorithm, Hierarchical clustering algorithm, Gaussian mixture model. Text Books: 1. Hands-On Machine Learning with Scikit-Learn, Keras, and TensorFlow, Second Edition, Aurelien Geron, O'Reilly publishers, ISBN: 781492032649. 2. Andreas C. Muller and Sarah Guido. DEPARTMENT OF COMPUTER SCIENCE AND ENGINEERING

Machine Learning Lab									
III B. Tech. –VI Semester (Code: 20CSL602/CC21)									
Practicals	:	3 Hours/Week	Continuous Assessment	:	30				
Final Exam	:	3 hours	Final Exam Marks	:	70				

Pre-Requisite: Basic Calculus and Probability

Course Objectives: Students will be able to

- Learn a Regression Model
- Comprehend a Supervised Learning Model
- Apply Ensemble methods for improving the performance of a Learning Model
- Apply an Unsupervised Learning Model

Course Outcomes: Students will be able to CO1 Apply the correct regressions models for the given problems and implement it. CO2 Analyze the suitable supervised learning model for the given problem and implement it. CO3 Identify the suitable probabilistic learning model for the given problem and implement it. CO4 Choose the correct clustering algorithm for the given problem and implement it.

Mapping of Course Outcomes with Program Outcomes & Program Specific Outcomes

		POs											PSOs		
CO	1	2	3	4	5	6	7	8	9	10	11	12	1	2	3
CO1	3	3	3	3	3	-	-	2	-	2	-	3	3	3	3
CO2	3	3	3	3	3	-	-	2	-	2	-	3	3	3	3

CO4	3	3	3	3	3	-	-	2	-	2	-	3	3	3	3

LIST OF EXPERIMENTS

- 1. Write sample programs using
 - a) NumPy b) Pandas
- 2. Write sample programs using
 - a) Matplotlib b) Scikit Learn
- 3. Write a program to implement the linear regression using
 - a) Stochastic gradient descent approach of training for a sample training data set.
 - b) Batch gradient descent approach of training for a sample training data set
- 4. Write a program to implement the naïve Bayesian classifier for a sample training data set. Compute the performance of the classifier.
- 5. Write a program to implement the Logistic regression for a sample training data set and test the same using appropriate data sets.
- 6. Write a program to demonstrate the working of the decision tree based on ID3 algorithm. Use an appropriate data set for building the decision tree and apply this knowledge to classify a new sample. Compute the performance of the classifier, considering few test data sets.

(Autonomous)

DEPARTMENT OF COMPUTER SCIENCE AND ENGINEERING

- 7. Write a program to implement the Random Forest classifier for a sample training data set stored as a .CSV file. Compare the performance of the classifier with any weak classifier, considering few test data sets.
- 8. Write a program to implement the AdaBoost classifier for a sample training data set. Compare the performance of the classifier with Random Forest classifier, considering few test data sets.
- 9. Apply k-Means algorithm to cluster a dataset.
- 10. Apply Hierarchical clustering algorithm to cluster a dataset.

Mobile Application Development Lab										
(Job Oriented Elective Lab – II)										
III B.Tech – VI Semester (Code: 20CSL603/JOL2A)										
Practicals	:	3 Hours/Week	Continuous Assessment	:	30					
Final Exam	Exam : 3 hours Final Exam Marks : 70									

Pre-Requisite: Object Oriented Programming (20CS303)

Course Objectives: Students will be able to

- Understand the Android Application Architecture and Working.
- > Understand how to develop android applications and internal working of applications
- > Understand Intents, Broadcast Receivers, Preferences.
- Understand to develop android applications using Databases, Content Providers, Services & Menus.

Course Out	tcomes: Students will be able to
CO1	Create an Environment to develop Android applications.
CO2	Design user Interfaces using Activities, Layouts & Fragments.
CO3	Develop Android apps using intents and shared preferences.
CO4	Develop android apps using SQLite database

Pre-Requisite: Object Oriented Programming (20CS303)

Course Objectives: Students will be able to

- Describe the creation of 3D models and their animation along a path with maya.
- Understand the creation of 3D model creation using Z-Brush
- Illustrate the creation of 2D game development in unity and the application of wander algorithm.
- Understand the creation of 3D game, monitoring lives and score Keeping

Course Ou	tcomes: Students will be able to
CO1	Illustrate creation of 3D models and their animation along a path with maya.
CO2	Dramatize the creation of 3D model creation using Z-Brush.
CO3	Devise the creation of 2D game development in unity and the application of wander algorithm.
CO4	Organize the creation of 3D game, monitoring lives and score Keeping.

LIST OF EXPERIMENTS

- > Build a spaceship with polygons in maya.
- ➤ Build a spaceship with NURBS surfaces in maya.
- > Application of texture to the spaceship.
- Animate poly spaceship and NURBS spaceaship along various path.
- > Build a 3D model of human, add IK chains for controlling the movement of hands and legs.
- Animate the walk cycle of primitive man in maya.
- Export a 3D model from maya (.fbx file).
- > Export a model from Z-Brush to maya.
- Create a video game character in Z-Brush.
- > Create a Hyper real character in Z-Brush.
- > Create a Photo real character in Z-Brush.
- > Create a sprite sheet and its animation in unity.
- > Creation of basic transformation in unity using c script.
- > Building health bar and control values on it with c script.
- Experiment with canvas object- creation of text box, buttons and control them with c script.
- Experiment with onCollisionEnter2D() and onCollisionExit2D() methods in unity.
- ➤ Controlling transitions in animator based on boolean and float variables.
- implement camera following in unity with c script
- > Creation of animated materials in unity.

> import 3D	model into unity from maya.
_	3D game in unity with multiple states.

Course Obj	ectiv	ves: Students will be able	e	
A	То	understand the importan	ce of the Constitution in a Democrati	c Society.
>			ntal Rights and make the best use of the duties and became a good citizen.	hem and the duties
>		know the judicial supre timate Right through Co	macy and independence of Judiciary ourt of Law.	and fight for his
>		participate in Nation buil	lding activities and be away from design f governance.	tructive outfits and
Course Ou	tcon	nes: Students will be able	e to	
CO1	Abl	e to understand the impo	ortance of the constitution in a Democ	cratic Society.
CO2	ack		ental Rights and effectively apply bilities of a citizen, fulfilling those d	

CO1	Able to understand the importance of the constitution in a Democratic Society.
CO2	Comprehend the Fundamental Rights and effectively apply them, while also acknowledging the responsibilities of a citizen, fulfilling those duties, and aspiring to become a responsible citizen
CO3	Know about Judicial supremacy and Independence of judiciary and fight for his legitimate Rights through court of law.
CO4	Participate in nation building activities and be away from destructive outfits and in the democratic process of governance.

Professional Elective – IV IV B. Tech. – VII Semester (Code: 20CS702/PE4B)

Lectures	:	3 Hours/Week	Continuous Assessment	:	30
Final Exam	:	3 hours	Final Exam Marks	:	70

Pre-Requisite: Compiler Design (20CS601), Machine Learning (20CS602)

Course Objectives: Students will be able to

- Get familiarized with the concepts and techniques of Natural language Processing for analyzing words based on Morphology and CORPUS.
 - Make them understand the concepts of morphology, syntax, semantics and pragmatics
- > of the language and that they are able to give the appropriate examples that will illustrate the above mentioned concepts.
- Recognize the significance of pragmatics for natural language understanding.
- ➤ Be capable to describe the application based on natural language processing and to show the points of syntactic, semantic and pragmatic processing.

Course Outcomes: Students will be able to CO1 Apply the principles and processing of natural language processing using computers and create CORPUS linguistics based on digestive approach CO2 Analyze the syntax, semantics and pragmatics of a statement written in a natural language and perform POS tagging for a given natural language. CO3 Demonstrate the techniques for the text-based processing of natural language with respect to morphology. CO4 Elaborate the feature engineering techniques needed for real time implementation of various natural language applications.

UNIT-1 12 Hours

Basics of NLP: - Evolution of Human Language, Text Mining, Need of Text Mining, Text Mining & Natural Language Processing, Basic Structure of a NLP Application, Understanding basic applications, Advantages of togetherness-NLP and Python.

Corpus Analysis: - What is a corpus? Why do we need a corpus? Understanding corpus analysis, Understanding types of data attributes, Exploring different file formats for corpora.

UNIT-2	12 Hours
--------	----------

(Autonomous)

DEPARTMENT OF COMPUTER SCIENCE AND ENGINEERING

Understanding the Structure of a Sentence: - Understanding components of NLP, Natural language understanding, Defining context-free grammar, Morphological analysis, Syntactic analysis, Semantic Analysis, Ambiguity, Handling Ambiguity, Discourse integration, Pragmatic analysis.

UNIT-3 12 Hours

Preprocessing: - Handling corpus-raw, Handling corpus-raw sentences, Basic preprocessing, Practical and customized preprocessing.

UNIT-4 | 12 Hours

Feature Engineering and NLP Algorithms:- Understanding feature engineering, Basic feature of NLP, Basic statistical feature of NLP, Advantages of features engineering, Challenges of features engineering.

Text BooksPython Natural Language Processing (Packt Publishers) Author: Jalaj ThanakiReferencesNatural Language Processing (Oxford Publishers) Author: Tanvir Siddiqui

	Protocols for Secure Electronic Commerce											
Professional Elective – IV												
	IV B. Tech. – VII Semester (Code: 20CS702/PE4C)											
Lectures	:	3 Hours/Week	Continuous Assessment	:	30							
Final Exam : 3 hours Final Exam Marks : 70												

Pre-Requisite: Cryptography and Network Security (20CS603)

Course Objectives: Students will be able to

- To Comprehend and apply electronic money and payment systems.
- To Plan the architecture for the electronic payments and provide security for the payments.
- To Recognize the concept of security socket layer and the protocols.
- To Comprehend and plan micro payments and support face to face commerce.

CO1 Analyze the impact of E-commerce on business models and strategies. TO develop E-marketing strategies and digital payment. CO2 Comprehend E-marketing tools and E-Business enterpreneurship. To infer insights on business incubators.

- CO3 Analyze SSL,TSL and established protocols.
- CO4 Develop the frame work and anatomy of money and payment systems.

UNIT-1 12 Hours

Overview of Electronic Commerce: What Is Electronic Commerce, Categories of Electronic Commerce, The Influence of the Internet, Infrastructure for Electronic Commerce, Network Access, Consequences of E-Commerce, Summary.

Money and Payment Systems:- The Mechanisms of Classical Money, Instruments of Payment, Types of Dematerialized Monies, Purses and Holders, Transactional Properties of Dematerialized Currencies, Overall Comparison of the Means of Payment, The Practice of Dematerialized Money, Banking Clearance and Settlement, Summary.

UNIT-2 12 Hours

Algorithms and Architectures for Security: Security of Commercial Transactions, Security of Open Financial Networks, Security Objectives, OSI Model for Cryptographic Security, Security Services at the Link Layer, Security Services at the Network Layer, Security Services at the Application Layer, Message Confidentiality, Data Integrity, Identification of the Participants, Authentication of the Participants, Access Control, Denial of Service, Nonrepudiation, Secure Management of Cryptographic Keys, Exchange of Secret Keys: Kerberos, Public Key Kerberos,

(Autonomous)

DEPARTMENT OF COMPUTER SCIENCE AND ENGINEERING

Exchange of Public Keys, ISAKMP (Internet Security Association and Key Management Protocol), SKIP (Simple Key Management for Internet Protocols), Key Exchange Algorithm, Certificate Management, Encryption Cracks, Summary.

Business-to-Business Commerce: Overview of Business-to-Business Commerce, Examples of Business-to-Business Electronic Commerce, Business-to-Business Electronic Commerce Platforms, Obstacles Facing Business-to-Business Electronic Commerce, Business-to-Business Electronic Commerce Systems, Structured Alphanumeric Data, Structured Documents or Forms, EDI Messaging, Security of EDI, Relation of EDI with Electronic Funds Transfer, Electronic Billing, EDI Integration with Business Processes, Standardization of the Exchanges of Business-to-Business Electronic Commerce, Summary.

UNIT-3

12 Hours

SSL (Secure Sockets Layer):- General Presentation of the SSL Protocol, SSL Subprotocols, Example of SSL Processing, Performance Acceleration, Implementations, Summary. TLS (Transport Layer Security) and WTLS (Wireless Transport Layer Security):- From SSL to TLS, WTLS, Summary.

The SET Protocol:- SET Architecture, Security Services of SET, Certification, Purchasing Transaction, Optional Procedures in SET, SET Implementations, Evaluation, Summary.

UNIT-4

12 Hours

Composite Solutions:- C-SET and Cyber-COMM, Hybrid SSL/SET Architecture, 3-D Secure, Payments with CD-ROM, Summary.

Micropayments and Face-to-Face Commerce:- Characteristics of Micropayment Systems, Potential Applications, Chipper, GeldKarte, Mondex, Proton, Harmonization of Electronic Purses, Summary.

Remote Micropayments:- Security without Encryption: First Virtual, NetBill, KLELine, Millicent, PayWord, MicroMint, eCoin, Comparison of the Different First-Generation Remote Micropayment Systems, Second-Generation Systems, Summary.

DEPARTMENT OF COMPUTER SCIENCE AND ENGINEERING

	Cloud Programming									
	Job Oriented Elective – III									
	IV B. Tech. – VII Semester (Code: 20CS703/JO3A)									
Lectures	:	3 Hours/Week	Continuous Assessment	:	30					
Final Exam	:	3 hours Final Exam Marks :								

Pre-Requisite: Problem Solving using Programming (20CS203), Object Oriented Programming (20CS303), Operating Systems (20CS304), Computer Networks (20CS502), Web Technologies (20CS402)

Course Objectives: Students will be able to

- Understand the Cloud Computing environment, Windows Azure platform, and Azure websites service.
 - Configure Visual Studio with Azure SDK, develop applications to demonstrate Azure
- storage services Blob, Table, Queue and Files. Learn the concept of Azure storage Security.
- Demonstrate the concepts of Azure Virtual Machines and Azure Virtual Networks, Azure SQL.
- Learn Service Bus, Azure Active Directory, Azure Key Vault.

Course Outcomes: Students will be able to Configure visual studio with Azure SDK. Understand the basics of cloud computing, design and deploy ASP .NET web forms and MVC web sites to Azure cloud environment using VS. Design cloud service applications to demonstrate Azure storage services-Blob table queue and files. CO3 Create and configure Azure virtual machines, Azure virtual networks and Azure SQL. CO4 Write c# applications to access service bus.

Mapping of Course Outcomes with Program Outcomes & Program Specific Outcomes

		POs												PSOs		
CO	1	2	3	4	5	6	7	8	9	10	11	12	1	2	3	
CO1	3	2	3	-	3	-	-	-	-	-	-	2	3	3	3	
CO2	3	2	3	-	3	-	-	-	-	-	-	2	3	3	3	
CO3	3	2	3	-	3	-	-	-	-	-	-	2	3	3	3	
CO4	3	2	3	-	3	-	-	-	-	-	-	2	3	3	3	

UNIT-1 12 Hours

Introduction to Cloud Computing & Windows Azure Platform – What is Azure?, Overview of Cloud Computing, Comparison of on-premises versus Azure, Service models, Deployment models, Azure services, Azure Resource Manager, Azure subscriptions, Azure registration, Exploring Management portal.

Windows Azure Websites – Visual Studio – Introduction to .NET Framework, Introduction to ASP.NET, Razor syntax, Forms and validation, Working with data, Creating and publishing simple and database driven ASP.NET web sites.

UNIT-2 12 Hours

Cloud Applications - Software Development Kits, Windows Azure Tools for Visual Studio, Cloud Project with a Web Role, Deployment to Windows Azure, Configuration and Upgrading, Service

(Autonomous)

DEPARTMENT OF COMPUTER SCIENCE AND ENGINEERING

Definition File, Service Configuration File and Role Properties. Cloud applications using ASP.NET.

Windows Azure Storage - Local Storage Vs Azure Storage, Windows Azure Storage Account, Windows Azure Management Tool, Blobs, Tables, Queues, Files. Worker Roles - Queue Service. Security and Azure Storage - Securing your storage account, Securing access to your data, Securing your data in transit, Encryption at rest, Using Storage Analytics to audit access, Using Cross-Origin Resource Sharing (CORS).

UNIT-3 12 Hours

Virtual Machines – Introduction to Azure Virtual Machine, Virtual machine models, Virtual machine components, Virtual Machine creation, connecting to a virtual machine, configuring and managing virtual machine, scaling Azure virtual machine, Installing SQL server and J2EE Platform, Connecting to SQL Server on Virtual Machine.

Azure Virtual Networks – Introduction, Network Security Groups, Cross-premises connection options, Point-to-site network.

Azure SQL – Azure SQL Features, Database Server Creation in the Cloud, Azure SQL Relational Engine Features, Azure SQL Access, Existing Database Migration, Applications connecting to SQL Azure.

UNIT-4 12 Hours

Service Bus - Service Bus, Relayed messaging, Brokered Messaging- Queues, Topics.

Azure Active Directory - Overview of Azure Active Directory, Creating a directory, Users and groups, Multi-Factor Authentication, Application gallery.

Azure Key Vault - Basic concepts, Terminology used in Azure Key Vault, Ways to access Keys and Secrets in a Key Vault, Steps to authenticate an application with the Key Vault, Benefits of using Azure Key Vault.

DEPARTMENT OF COMPUTER SCIENCE AND ENGINEERING

	Big Data Analytics									
	Job Oriented Elective – III									
	IV B. Tech. – VII Semester (Code: 20CS703/JO3C)									
Lectures	:	3 Hours/Week	Continuous Assessment	:	30					
Final Exam	:	3 hours	Final Exam Marks	:	70					

Pre-Requisite: Problem Solving using Programming (20CS203), Object Oriented Programming (20CS303), Database Management System(20CS403)

Course Objectives: Students will be able to

- Understanding Big data, Hadoop and Hadoop Distributed File System.
- Understanding YARN(Yet Another Resource Node), Map Reduce mechanism.
- Understanding PIG, HIVE.
- ➤ Understanding SQOOP, SPARK.

Course	Outcomes: Students will be able to
CO1	Identify Hadoop, the distributed file system in Hadoop, and big data.
CO2	Recognize the Map Reduce and YARN (Yet Another Resource Node) mechanisms.
CO3	Integrate PIG and HIVE.
CO4	Recognize SQOOP and SPARK.

Mapping of Course Outcomes with Program Outcomes & Program Specific Outcomes

		POs											PSOs			
CO	1	2	3	4	5	6	7	8	9	10	11	12	1	2	3	
CO1	3	3	3	3	3	-	-	-	-	-	-	-	3	3	3	
CO2	3	3	3	3	3	-	-	-	-	-	-	-	3	3	3	
CO3	3	3	3	3	3	-	-	-	-	-	-	-	3	3	3	
CO4	3	3	3	3	3	-	-	-	-	-	-	-	3	3	3	

UNIT-1 12 Hours

Big Data Analytics: Introduction to Big Data Analytics, Characteristics of Big Data, Sources of Big Data, Applications of Big Data.

HADOOP: Introduction to Hadoop, Hadoop components, Configuration of Hadoop.

The Hadoop Distributed File System: The design of HDFS, HDFS concepts, The command line interpreter, Basic File system operations, Hadoop File System, Interfaces Data flow, parallel copying with distep.

UNIT-2 12 Hours

YARN: Anatomy of YARN application run, YARN compared to Map Reduce 1, Scheduling in YARN.

How Map Reduce Works: Anatomy of Map Reduce job run, Failures, Shuffle and sort, Task execution.

Map Reduce Features-Counters, sorting, joins side data distribution, Writing map reduce programs, deploying map reduce programs on Hadoop Cluster.

UNIT-3 12 Hours

Installing and Running Pig-Execution Types, Running Pig Programs, Grunt, Pig Latin Editors, An Example, Comparison with Databases, Pig Latin-Structure, Statements, Expressions, Types, Schemas, Functions, Macros, User-Defined Functions-A Filter UDF, An Eval UDF, Data Processing Operators- Loading and Storing Data, Filtering Data, Grouping and Joining Data,

(Autonomous)

DEPARTMENT OF COMPUTER SCIENCE AND ENGINEERING

Sorting Data, Combining and Splitting Data, Pig in Practice-Parallelism, Anonymous Relations, Parameter Substitution.

Installing Hive, The Hive Shell, An example, Running Hive, Configuring Hive, Hive Services, The Metastore, Comparison with traditional databases, Schema on Read versus Schema on Write, Update, transactions and Indexes, SQL on Hadoop alternatives, HiveQL, Data types, Operators and functions, Tables, Querying Data-sorting and aggregating, MapReduce Script, joins, Sub queries, Views.

UNIT-4	12 Hours

Spark: Installing spark, an example spark application, jobs, stages, tasks, a scalastand alone application, anatomy of spark job run, job submission, DAG construction, task scheduling, task execution, execution cluster managers, spark on YARN.

Sqoop: Getting Sqoop, Sqoop Connectors, A Sample Import, Text and Binary File Formats, Generated Code, Additional Serialization Systems, Imports: A Deeper Look, Controlling the Import, Imports and Consistency.

UNIT-1 12 Hours

General Management: Management definition, Functions of Management and Principles of Management.

Scientific Management: Definition, Principles of Scientific Management.

Forms of Business Organization: Choice of form of organization, Salient features of Sole Proprietorship, Partnership, Joint Stock Company: Private Limited and Public Limited companies; Merits and demerits.

Organization: Definition, Line, line and staff, functional and matrix organization, Introduction to Strategic Management: Definition and scope

UNIT-2 12 Hours

(Autonomous)

DEPARTMENT OF COMPUTER SCIENCE AND ENGINEERING

Human Resource Management: Functions of HR management, human resource planning, recruitment, selection, placement, training & development and performance appraisal, Motivation theories, leadership styles.

Marketing Management: Concepts of Selling and Marketing, Functions of Marketing, Marketing mix (4 Ps); Advertising and sales promotion; Product life cycle; distribution channels

UNIT-3 12 Hours

Materials Management: Inventory Control, objectives of inventory control, Inventory costs, Basic EOQ model, Model with Price breaks, ABC analysis, FSN Analysis, VED Analysis.

Total Quality Management: Definition of, Importance of quality, Phases of quality management, quality control, Difference between Inspection and Quality control, Components of total quality, Quality Function Deployment

Introduction to Supply Chain Management: Definition, scope of SCM, Drivers of SCM, Advantages, limitations

UNIT-4 12 Hours

Financial Management: Functions of finance, Types of Capital-Fixed and Working Capital, Break Even Analysis.

Entrepreneurship Development: Introduction, Entrepreneurial characteristics, Functions of an Entrepreneur; Factors affecting entrepreneurship; Role of communication in entrepreneurship; Entrepreneurial Development-Objectives, Need of Training for enterprises; Finance for the enterprises.

IV B. Tech. – VII Semester (Code: 20CSL701/SOC5)

Practicals:	5 Hours/Week (2T+3P)	Continuous Internal Assessment:	30 Marks
Final Exam :	3 hours	Semester End Exam:	70 Marks

Pre-Requisite:

Course Objectives: Students will be able to

- Understand the concepts of DevOps and version control.
- Apply Continuous Integration process.
- Apply Continuous delivery process.
- Apply Configuration management Tools.

Course Outcomes: Students will be able to

CO1	Understand Version Control using git and github.											
CO2	Use tools like Jenkins for Continuous Integration.											
CO3	Use tools like Docker for Continuous Delivery.											
CO4	Use tools like Ansible & Kubernetes for Configuration management and Continuous Delivery.											

Mapping of Course Outcomes with Program Outcomes & Program Specific Outcomes

UNIT-I 20 Hours

DevOps Basics & Version Control: Definition of DevOps, DevOps Stakeholders, DevOps goals, DevOps life cycle.

Version Control, Continuous Integration, Continuous Delivery, Continuous Deployment,

(Autonomous)

DEPARTMENT OF COMPUTER SCIENCE AND ENGINEERING

Continuous Monitoring.

Git basics, Git features, installing Git, Git essentials, common commands in Git, working with remote repositories using GitHub.

List of Experiments

- 1. Demonstrate Deploying an Application to GitHub.
- 2. Demonstrate working with Git Shell commands.
- 3. Demonstrate working with remote repositories.

UNIT-II

20 Hours

Continuous Integration using Jenkins: Introduction-Understanding Continuous Integration, introduction about Jenkins, Build Cycle, Jenkins Architecture, installation, Jenkin management. Adding a slave node to Jenkins, Building Delivery Pipeline, Pipeline as a Code.

List of Experiments

- 1. Demonstrate creation of maven application.
- 2. Demonstrate Building Delivery Pipeline (Continuous Integration) using Jenkins.

UNIT-III

20 Hours

Continuous Delivery: Containerization with Docker.

List of Experiments

1. Demonstrate Containerization with Docker.

UNIT-IV

20 Hours

Continuous Delivery: Configuration management, and application deployment functionality using Ansible, Containerization using Kubernetes.

List of Experiments

- 1. Demonstrate CI/CD job to build code on ansible and deploy it on container.
- 2. Demonstrate Containerization with Kubernetes.

Practicals	:	3 Hours/Week	Continuous Assessment	:	30					
Final Exam	:	3 hours	Final Exam Marks	:	70					

Pre-Requisite: Problem Solving using Programming Lab (20CSL203), Object Oriented Programming Lab (20CSL303)

Course Objectives: Students will be able to

- Understand the Cloud Computing environment, Windows Azure platform, and Azure websites service.
- Configure Visual Studio with Azure SDK, develop applications to demonstrate Azure
- storage services Blob, Table, Queue and Files. Learn the concept of Azure storage Security.
- Demonstrate the concepts of Azure Virtual Machines and Azure Virtual Networks, Azure SQL.
- Learn Service Bus, Azure Active Directory, Azure Key Vault.

Course Outcomes: Students will be able to Configure Visual Studio with Azure SDK. Understand the basics of Cloud computing, design and deploy ASP.NET Razor Pages websites to Azure Cloud Environment using Visual Studio. CO2 Design Cloud Service applications to demonstrate Azure storage services – Blob, Table, Queue and Files. CO3 Create and configure Azure Virtual Machines, Azure Virtual Networks, and Azure SQL. CO4 Write C# applications to access Service Bus.

Mapping of Course Outcomes with Program Outcomes & Program Specific Outcomes

CO4	3	3	3	-	3	-	-	2	-	2	-	3	3	3	3

LIST OF EXPERIMENTS

- 1. Create Azure Student subscription and explore the Azure management portal.
- 2. Design an ASP.NET MVC website to perform CRUD operations on a SQL Server database with search option and validation.
- 3. Design Cloud Service with WebRole to demonstrate Windows Azure Blob Storage.
- 4. Design Cloud Service with WebRole to demonstrate Windows Azure Table Storage.
- 5. Design Cloud Service with WebRole and WorkerRole to demonstrate Windows Azure Queue Storage.
- 6. Design Cloud Service to demonstrate Windows Azure Files Storage.

(Autonomous)

DEPARTMENT OF COMPUTER SCIENCE AND ENGINEERING

- 7. Create Azure Virtual Machine and configure with Microsoft SQL Server, and J2EE platform to host web applications.
- 8. Design a Cloud service (or) C# Console Application to access Virtual Machine SQL Server database.
- 9. Design Cloud Service (or) C# Console Application to access Azure SQL.
- 10. Write C# Console Application to implement Service Bus Relayed Messaging.

11. Write C# Co	onsole Application to implement Service Bus Brokered Messaging using Queues.
12. Write C# Co	onsole Application to implement Service Bus Brokered Messaging using Topics.

DEPARTMENT OF COMPUTER SCIENCE AND ENGINEERING

		Cyber Security L	ab		
		(Job Oriented Elective I	Lab – 3)		
		IV B. Tech. – VII Semester (Code:	20CSL702/JOL3B)		
Practicals	:	3 Hours/Week	Continuous Assessment	:	30
Final Exam	:	3 hours	Final Exam Marks	:	70

Pre-Requisite: Operating Systems(20CS304), Computer Networks(20CS502), Cryptography & Network Security(20CS603)

Course Objectives: Students will be able to

- Learn the Installations of different Tools (VMWare, Kali Linux, Windows OS, Metasploitable2, Veil frame work and DVWA).
- Understand the usage of Information Gathering and MITMF tools. Learn how to detect/prevent intrusions in system by using snort and configuring firewall Settings using IPtables.
 - Learn how to hack a system and gathering information of a system using metasploit
- Frame work and meterpreter shell commands, mechanisms for cracking passwords and wireless network attacks.
- Understand the usage of the Web application hijacking tools, DOS, Sql-injection, XSS and Phishing attacks.

Course	Outcomes: Students will be able to
CO1	Install the different Tools (VMWare, Kali Linux, Windows OS, Metasploitable2, Veil
COI	framework and DVWA).
CO2	Test the Information Gathering and MITMF tools, Detect/prevent intrusions in system
CO2	by using snort and configure firewall Settings using IPtables.
CO3	Practice the hacking and gathering information of a system using metasploit frame work
COS	and meterpreter shell commands, password cracking & wireless network attacks.
CO4	Test the Web application hijacking tools, DOS, Sql-injection, XSS and Phishing attacks.

LIST OF EXPERIMENTS

Experiments

- 1. Installations: VM-ware, kali, windows OS, metaspotiable-2, DVWA.
- 2. Information Gathering Tools:- a) Recon-ng b) Nmap c) Dmitry d) Netdiscover
- 3. Session hijacking, Man in The Middle (MTM) Attack.
- 4. Linux Firewall rules configuration by Iptables.
- 5. Snort installation and usage in
 - a) Packet Sniffer mode
 - b) Packet Logger mode
 - c) IDS mode

(Autonomous)

DEPARTMENT OF COMPUTER SCIENCE AND ENGINEERING

- d) IPS mode
- 6. Hacking any windows OS by using Malware.
- 7. Password Attacks:
 - a) Online Password cracking with hydra, xhydra.
 - b) Offline Password Cracking with John the ripper.
- 8. Wireless Network attacks:
 - a) Aircrack-NG.
 - b) Fern Wi-Fi cracker
- 9. Burpsuit, OWASP ZAP tools
- 10. DOS attack, Sql-injection, XSS attack.
- 11. Phishing attacks with Setoolkit.

Big Data Analytics Lab

(Job Oriented Elective Lab – 3)

IV B. Tech. – VII Semester (Code: 20CSL702/JOL3C)

Practicals:	3 Hours / Week	Continuous Internal Assessment:	30
Final Exam :	3 hours	Semester End Exam:	70

Course Outcomes: Students will be able to

- Understand the concepts of Data mining and Big Data Analytics
- Apply machine learning algorithms for data analytics
- Analyze various text categorization algorithms
- Use Technology and tools to solve the Big Data Analytics problems

		POs											PSOs

CO4	3	3	3	3	3	-	-	2	-	2	-	3	3	3	3

LIST OF EXPERIMENTS

- 1. Write the steps for installation of Hadoop.
- 2. Write commands to interact with HDFS interface.
- 3. Write a Map Reduce program for Word Count Example.
- 4. Write a Map Reduce program for Card Count data set.
- 5. Write the steps for installation of Pig.
- 6. Write the word count script using Pig Latin.
- 7. Illustrate the basic Pig Latin concepts with help of any dataset.
- 8. Write the steps for installing Hive.
- 9. Illustrate the creation, loading & complete select statements in Hive.
- 10. Write the script how data will be transfer using Sqoop.

The Project work shall be carried out by a batch consisting not more than four students for one semester. It should help the students to comprehend and apply different theories and technologies that they have learnt through and are learning. It should lead to a substantial result as a comparative study, a new application of the technologies available or some extension to the works carried out by some researcher and published in referred journals. Each batch must carry out the analysis, design, implementation and testing of the entire project basing on the Software Engineering principles. There shall be a total of four reviews made by the batch regarding:

- 1. 0th Review: The idea/concept which forms the basis for their project shall be presented to the guide, concerned in charge and classmates and shall get the approval for Continuation.
- 2. 1st Review: The analysis and design carried out.
- 3. 2nd Review : The implementation and the testing done.
- 4. 3rd Review: Over all Presentation of the work carried out and the results found out for the valuation under the internal Assessment.

A comprehensive report on the lines of IEEE Format is to be submitted at the end of the semester, which is certified by the concerned guide and the HOD.

There shall be an external guide appointed by the Principal/Controller of Examiner to make an assessment and to carry out the Viva-Voce examination.

DEPARTMENT OF COMPUTER SCIENCE AND ENGINEERING

Advanced Computer Architecture									
Honer Course (Code: B)									
Lectures	:	3 Hours/Week	Continuous Assessment	:	30				
Final Exam	:	3 hours	Final Exam Marks	:	70				

Pre-Requisite:

UNIT-1 12 Hours

Parallel Computer Models: The state of computing, Classification of parallel computers, Multiprocessors and Multi computers, Multi-vector and SIMD computers.

Program and network properties: Conditions of parallelism, Data and resource Dependencies, Hardware and Software parallelism, Program partitioning and scheduling, Grain Size and latency, Program flow mechanisms, Control flow versus data flow, Data flow Architecture, Demand driven mechanisms, Comparisons of flow mechanisms.

System Interconnect Architectures: Network properties and routing, Static interconnection Networks, Dynamic interconnection Networks, Hierarchical bus systems, Crossbar switch and multiport memory, Multistage and combining network.

UNIT-2 12 Hours

Principles of Scalable Performance: Performance Metrics and Measures: Parallelism Profile in Programs, Efficiency, Utilization and Quality, Standard Performance Measures, Speedup Performance Laws: Amdahl's law for fixed load, Gustafson's law for scaled problems, Memory Bounded Speedup Model.

Pipelining: Linear pipeline processor, nonlinear pipeline processor, Instruction pipeline Design-Instruction Execution Phases, Mechanisms for instruction pipelining, Dynamic instruction scheduling, Branch Handling techniques, Arithmetic Pipeline Design: Computer Arithmetic principles, Static Arithmetic pipeline, Multifunctional arithmetic pipelines.

UNIT-3 12 Hours

MULTI Processors: Multiprocessor System Interconnect: Hierarchical Bus Systems, Crossbar Switch and Multiport Memory, Multistage and Combining Networks, Cache Coherence and Synchronization Mechanisms: The Cache Coherence problem, Snoopy Bus Protocols, Directory Based Protocols, Hardware Synchronization Mechanisms, Message-passing Mechanism: Message Routing Schemes, Deadlock and Virtual Channels, Flow Control Strategies, Multicast Routing Algorithms.

Scalable, Multithreaded and Dataflow Architectures: Latency-Hiding Techniques, Principles of Multithreading, Scalable and Multithreaded Architectures.

UNIT-4 12 Hours

Thread Based Parallelism: Introduction, Using the python threading model, How to define a Thread, How to determine a current Thread, How to use a thread in subclass, Thread Synchronization with Lock and RLock, Thread Synchronization with RLock, Thread Synchronization with Semaphores, Thread Synchronization with a Condition, Thread Synchronization with an Event, Using a with Statement, Thread Communication with a Queue, Evaluating the performance of Multithreaded applications.

Process Based Parallelism: Introduction, How to spawn a process, How to name a Process, How to run a Process in the background, How to kill a process, How to use a process in subclass, how to exchange objects between processes, How to synchronize the Processes, How to manage a state between Processes, How to use a Process pool, Using the mpi4py python module, Point-to-Point to Communications, Avoiding Dedalock problems, Collective communication using Broadcast, Collective Communication using a Scatter, Collective Communication using Gather, Collective Communication using Alltoall, The reduce operation, How to Optimize an Operation.

Software Project Management										
Honer Course (Code: H)										
Lectures	:	4 Hours/Week	Continuous Assessment	:	30					
Final Exam	:	3 hours	Final Exam Marks	:	70					

Pre-Requisite: None

CO₄

Course Objectives: Students will be able to

- > Understand the fundamentals of modern software management, and difference from traditional software management.
- ➤ Discuss various process workflows, artifacts, and life cycle phases as well as diverse software architectures.
- Recognize the meaning of project milestones, organizational roles, and process automation.
- ➤ Understand the fundamentals of future software project management and various metrics and indicators.

Course Ou	Course Outcomes: Students will be able to							
CO1	Discover the fundamentals of modern software management, how it differs from traditional software management, and how to improve software economics.							
CO2	Recognize various process workflows, artifacts, and life cycle phases as well as diverse software architectures.							
СОЗ	Recognize the meaning of project milestones, organizational roles, and process automation.							
CO4	Discover the fundamentals of future software project management and various metrics and indicators.

1

UNIT-1 12 Hours

3

Conventional Software Management: The waterfall model, conventional software Management performance.

Evolution of Software Economics: Software Economics, pragmatic software cost estimation. **Improving Software Economics:** Reducing Software product size, improving software processes, improving team effectiveness, improving automation, Achieving required quality, peer inspections. **The old way and the new:** The principles of conventional software Engineering, principles of modern software management, transitioning to an iterative process.

UNIT-2 12 Hours

Life cycle phases: Engineering and production stages, inception, Elaboration, construction, transition phases.

Artifacts of the process: The artifact sets, Management artifacts, Engineering artifacts, programmatic artifacts.

(Autonomous)

DEPARTMENT OF COMPUTER SCIENCE AND ENGINEERING

Model based software architectures: A Management perspective and technical perspective. Work Flows of the process: Software process workflows, Iteration workflows.

UNIT-3 12 Hours

Checkpoints of the process: Major mile stones, Minor Milestones, Periodic status assessments. Iterative Process Planning: Work breakdown structures, planning guidelines, cost and schedule estimating, Iteration planning process, Pragmatic planning. Project Organizations and Responsibilities: Line-of-Business Organizations, Project Organizations, evolution of Organizations.

Responsibiliti	es: Line-of-Business Organizations, Project Organizations, evolution of									
Organizations.										
Process Autor	nation: Automation Building blocks, The Project Environment.									
UNIT-4 12 Hours										
Project Control and Process instrumentation : The seven core Metrics, Management indicators,										
quality indicate	ors, life cycle expectations, pragmatic Software Metrics, Metrics automation.									
Tailoring the	Process: Process discriminants.									
Future Softwa	re Project Management : Modern Project Profiles, Next generation Software									
economics, mo	odern process transitions.									
Case Study: T	The command Center Processing and Display system- Replacement (CCPDS-R)

Web Semantics										
Honer Course (Code: J)										
Lectures	:	3 Hours/Week, Tutorial:1 Continuous Assessment :								
Final Exam	:	3 Hours	Final Exam Marks	:	70					

Pre-Requisite: Web Technology

Course Objectives: The student will be able to

- > Understand the advantages of Semantic web and schemas of the semantic web
- Understand and implement the ideas of sematic web and querying in semantic
- Develop and apply logic for inferences in semantic web.
- Develop ontologies for various objects.

Course Outcomes: Students will be able to

CO1	Comprehend the advantages of Semantic web and schemas of the semantic web.
CO2	Develop and implement the ideas of sematic web and querying in semantic web.
CO3	Analyze and apply logic for inferences in semantic web.
CO4	Construct ontologies for various objects.

DEPARTMENT OF COMPUTER SCIENCE AND ENGINEERING

3.1, 3.2, 3.3, 3.4, 4.1, 4.2, 4.3]

UNIT-2 12 Hours

CPU Scheduling: Basic Concepts, Scheduling Criteria, Scheduling Algorithms.

Process Synchronization: Background, The Critical-Section Problem, Peterson's Solution, Synchronization Hardware, Mutex Locks, Semaphores, Classic problems of Synchronization, Monitors.

[Sections : 6.1,6.2,6.3, 5.1,5.2,,5.3,5.4,5.5,5.6,5.7,5.8]

UNIT-3

12 Hours

Deadlocks: System Model, Deadlock Characterization, Methods for Handling Deadlocks, Deadlock Prevention, Avoidance, Detection and Recovery.

Main Memory: Background, Swapping, Contiguous Memory Allocation, Segmentation, Paging, Structure of Page Table.

Virtual-Memory: Background, Demand Paging, Copy-on-Write, Page Replacement, Allocation of Frames, Thrashing, Other Considerations.

[Sections; 7.1,7.2,7.3,7.4,7.5,7.6,7.7,8.1,8.2,8.3,8.4,8.5,8.6,9.1, 9.2,9.3,9.4,9.5,9.6,9.9]

UNIT-4

12 Hours

File System Interface: File concept, Access Methods, Directory and Disk Structure,

File System Implementation: File System Structures, Directory Implementation, Allocation Methods

Protection: Goals of Protection, Principles of Protection, Domain of Protection- Domain Structure, Access Matrix, Implementation of Access Matrix.

Mass Storage Structure: Over View, Disk Structure, Disk Scheduling, Disk Management, RAID levels

[Sections:10.1,10.2,10.4,10.5,10.7,11.1,11.2,11.3,11.5,12.1,12.3,12.4,14.1,14.2,14.3,14.3.1,1 4.4,14.5]

Course Objectives: Students will be able to

- Familiarize with fundamental concepts of database and various database architectures and Design relations for Relational databases using conceptual data modeling.
- Implement formal relational operations in relational algebra and SQL.
- ➤ Identify the Indexing types and normalization process for relational databases
- Use mechanisms for the development of multi user database applications.

Course (Course Outcomes: Students will be able to								
CO1	Ability to apply knowledge of database design methodology which give a good formal foundation in relational data model and Understand and apply the principles of data								
	modeling using ER Model.								
CO2	Familiar with relational DB theory and will able to write relational algebra expressions,								
CO2	Relational Calculus and SQL.for query								
CO3	Design database schema and Identify and solve the redundancy problem in database								
CO3	tables using normalization.								
CO4	Understand transaction processing, concurrency control and recovery techniques.

UNIT-1 12 Hours

Databases and Database Users: Introduction - An Example - Characteristics of the Database Approach - Actors on the Scene - Workers behind the Scene - Advantages of Using the DBMS Approach - A Brief History of Database Applications - When Not to Use a DBMS.

Database System Concepts and Architecture: Data Models, Schemas, and Instances - Three-Schema Architecture and Data Independence - Database Languages and Interfaces - The Database System Environment - Centralized and Client/Server Architectures for DBMSs - Classification of Database Management Systems.

Data Modeling Using the Entity-Relationship (ER) Model: Using High-Level Conceptual Data Models for Database Design - An Example Database Application - Entity Types, Entity Sets, Attributes, and Keys - Relationship Types, Relationship Sets, Roles, and Structural Constraints - Weak Entity Types - Refining the ER Design for the COMPANY Database - ER Diagrams, Naming Conventions, and Design Issues.

UNIT-2 12 Hours

The Relational Data Model and Relational Database Constraints: Relational Model Concepts
- Relational Model Constraints and Relational Database Schemas - Update Operations,

(Autonomous)

DEPARTMENT OF COMPUTER SCIENCE AND ENGINEERING

Transactions, and Dealing with Constraint Violations - Relational Database Design Using ER-to-Relational Mapping.

Basics of SQL: DDL, DML and DCL Commands.

UNIT-3 12 Hours

Functional Dependencies and Normalization for Relational Databases: Informal Design Guidelines for Relation Schemas - Functional Dependencies - Normal Forms Based on Primary Keys - General Definitions of Second and Third Normal Forms, Boyce-Codd Normal Form.

Relational Database Design Algorithms and Further Dependencies: Properties of Relational Decompositions - Algorithms for Relational Database Schema Design – Multivalued Dependencies and Fourth Normal Form - Join Dependencies and Fifth Normal Form.

UNIT-4 12 Hours

Introduction to Transaction Processing Concepts and Theory: Introduction to Transaction Processing - Transaction and System Concepts - Desirable Properties of Transactions - Characterizing Schedules Based on Recoverability - Characterizing Schedules Based on serializability.

Concurrency Control Techniques: Two-Phase Locking Techniques for Concurrency Control - Concurrency Control Based on Timestamp Ordering – Multiversion Concurrency Control Techniques - Validation (Optimistic) Concurrency Control Techniques - Granularity of Data Items and Multiple Granularity Locking.

INTRODUCTION TO SOFTWARE ENGINEERING: The Evolving Role of Software, Software, the Changing Nature of Software, Legacy Software, Software Myths.

A GENERIC VIEW OF PROCESS: Software Engineering - A Layered Technology, a Process Framework, the CMMI, Process Patterns, Process Assessment, Personal and Team Process Models, Product and Process.

PROCESS MODELS: Prescriptive Models, the Waterfall Model, Incremental Process Models, Evolutionary Models, the Unified Process.

UNIT-2 12 Hours

AN AGILE VIEW OF PROCESS: What Is Agility? , What Is an Agile Process? , Agile Process Models.

REQUIREMENTS ENGINEERING: A Bridge To Design and Construction, Requirements Engineering Tasks, Initiating the Requirements Engineering Process, Eliciting Requirements,

(Autonomous)

DEPARTMENT OF COMPUTER SCIENCE AND ENGINEERING

Developing Use-cases, Building the Analysis Model, Negotiating Requirements, Validating Requirements.

BUILDING THE ANALYSIS MODEL: Requirements Analysis, Analysis Modeling Approaches, Data Modeling Concepts, Flow-Oriented Modeling, Class Based Modeling Creating a Behavioral Model.

UNIT-3 12 Hours

DESIGN ENGINEERING: Design within the Context of Software Engineering, Design Process and Design Quality, Design Concepts The Design Model, Pattern Based Software Design.

CREATING AN ARCHITECTURAL DESIGN: Software Architecture, Data Design, Architectural Styles and Patterns, Architectural Design, Assessing Alternative Architectural Designs.

MODELING COMPONENT-LEVEL DESIGN: What Is a Component? , Designing Class-Based Components, Conducting Component-Level Design, Designing Conventional Components.

PERFORMING USER INTERFACE DESIGN: The Golden Rules, User Interface Analysis and Design, Interface Analysis, Interface Design Steps, Design Evaluation.

UNIT-4 12 Hours

SOFTWARE PROCESS AND PROJECT METRICS: Introduction: Metrics Process and Project Domains, Software Measurement, Metrics for Software Quality, Integrating Metrics with Process.

SOFTWARE QUALITY ASSURANCE: Quality Concepts, Quality Movement, SQA, Software Reviews, Formal Technical Reviews, Formal Approaches to SQA, Software Reliability, ISO 9000 Quality Standards, SQA Plan.

SOFTWARE TESTING STRATEGIES: Strategic Approach, Strategic Issues, Test strategies for Conventional Software, Test strategies for Object Oriented Software, Validation Testing, System Testing, The Art of Debugging. White box testing. Black box testing.

UNIT-2

DATA Link Control: Flow Control, Error Control.

Types of Errors, Error Detection, Error Correction.

Network Layer: Network Layer Design Issues: Store-and-Forward Packet Switching, Services Provided to the Transport Layer, Implementation of Connectionless Service,

12 Hours

(Autonomous)

DEPARTMENT OF COMPUTER SCIENCE AND ENGINEERING

Implementation of Connection-Oriented Service, Comparison of Virtual-Circuit & Datagram Subnets.

Routing Algorithms: The Optimality Principle, Shortest Path Routing, Flooding, Distance Vector Routing, Link State Routing, Hierarchical Routing.

Congestion Control Algorithms: General Principles of Congestion Control, Congestion Prevention Policies, Congestion Control in Virtual-Circuit Subnets, Congestion Control in Datagram Subnets, Load Shedding, Jitter Control.

UNIT-3 12 Hours

Quality of Service: Requirements, Techniques for Achieving Good Quality of Service The Network Layer in the Internet: The IP Protocol, IP Addresses, Internet Control Protocols. The **Transport Layer, The Transport Service:** Services Provided to the Upper Layers, Transport Service Primitives, Berkeley sockets

Elements of Transport Protocols: Addressing, Connection Establishment, Connection Release, Flow Control and Buffering, Multiplexing, Crash Recovery.

UNIT-4 12 Hours

The Internet Transport Protocol (UDP): Introduction to UDP, Remote Procedure Call, The Real-Time Transport Protocol.

The Internet Transport Protocols (TCP): Introduction to TCP, The TCP Service Model, The TCP Protocol, The TCP Segment Header, TCP Connection Establishment, TCP Connection Release, Modeling TCP Connection Management, TCP Transmission Policy, TCP Congestion Control, TCP Timer Management.

Application Layer: The Domain Name System (DNS): The DNS Name Space, Resource Records, Name Servers.
