4	Scheme of Instruction and Examination	7-18
5	List of Abbreviations	19
6	Semester – I Syllabus	21-40
7	Semester – II Syllabus	41-59
8	Semester – III Syllabus	60-79
9	Semester – IV Syllabus	80-97
10	Semester – V Syllabus	98-127
11	Semester – VI Syllabus	128-158
12	Semester – VII Syllabus	159-188
13	Honors	189-205
14	Minors	206-220

VISION

• To produce Computer Science Engineers with Global Standards who can handle the challenges of the society and industry with their innovations and services.

MISSION

- To impart high quality education with effective teaching and learning process.
- To provide an environment where the students can handle research problems confidently.
- To prepare the students with latest technologies with fidelity towards industry.
- To inculcate professional ethics and human values in handling the engineering challenges.

PROGRAM EDUCATIONAL OBJECTIVES

PEO1: Choose diverse professional careers in software industry, research, academia, engineering, and administrative services.

PEO2: Apply the principles of basic sciences, mathematics and computer science to solve real world problems using digital computing systems.

PEO3: Analyze, design, implement and evaluate robust, scalable and cost-effective computer-based systems and processes in the industry with sustained self learning. **PEO4:** Be aware of professional and ethical practices in the context of social impacts of computing.

Transitory Regulations - R18 to R20 - Equivalence Subjects

R-20	1-1 SEM		R-18 1-1 SEM	SEM
20CS101/MA01	Linear algebra and differential equations	18MA001	Linear Algebra and ODE	1.1
20CS102/CY01	Engineering Chemistry	18CY001	Engineering Chemistry	1.1
20CS103/EL01	Communicative English	18EL001	Communicative English	1.1
20CSL101/MEL01	Engineering Graphics	18MEL01	Engineering Graphics	1.1
20CSL102/CYL01	Chemistry Lab	18CYL01	Chemistry Lab	1.1
20CSL103/ELL01	English Communication skills Lab	18ELL01	English Communication Lab	1.1

4-1, 4-2 SEM The students have to continue with R18 regulation only			

Course Structure Summary

S. No.	Category	BEC Breakup of Credits
1	Humanities & Social Science including Management Courses	12.5
2	Basic Science courses	18
3	Engineering Science courses including workshop, drawing, basics of electrical/mechanical/computer etc.	22.5
4	Professional core courses	48
5	Professional Elective courses relevant to chosen specialization/branch	12
6	Open subjects – Electives from other technical and /or emerging subjects	16.5
7	Project work, seminar, and internship in industry or elsewhere	16.5
8	Mandatory Courses [Professional Ethics & Human Values, Indian Constitution, Essence of Indian Knowledge Tradition]	(non-credit)
9	Skill Oriented Subjects	14
	Total	160

Semester Wise Credits Summary

Semester	Credits	With Honor Credits
Semester-I	16.5	16.5
Semester-II	22.5	22.5
Semester-III	21.5	21.5
Semester-IV	21.5	25.5
Semester-V	21.5	25.5
Semester-VI	21.5	25.5
Semester-VII	23	27
Semester-VIII	12	16
Total	160	180

List of Subjects offered under Honors in CSE

Note: - Students must acquire 20 credits for the award of Honors in CSE.

- i. 16 credits (04 courses@ 4 credits each) should be earned through the following list of courses.
- ii. 4 credits (02 courses@ 2 credits each) must be acquired through two MOOCs from the following list of courses with a minimum duration of 8/12weeks.
- iii. Before choosing those courses, students must complete prerequisites.

Code	List of HONOR Courses	Mode
А	Advanced Data Structures	Class Room
В	Advanced Computer Architecture	Class Room
С	Prompt Engineering & AI Tools	Class Room
D	Advanced Database Systems	Class Room

UNIT-2 12 Hours															

Differential Equations of first order: Definitions; Formation of a Differential equation; Solution of a Differential equation; Equations of the first order and first degree; variables separable; Linear Equations; Bernoulli's equation; Exact Differential equations.

Equations reducible to Exact equations: I.F found by inspection, I.F of a Homogeneous equation, In the equation M dx+N dy=0.

Applications of a first order Differential equations: Newton's law of cooling; Rate of decay of Radio-active materials.

[Sections: 11.1; 11.3; 11.4; 11.5; 11.6; 11.9; 11.10; 11.11; 11.12.1; 11.12.2; 11.12.4; 12.6; 12.8] UNIT-3 12 Hours

Linear Differential Equations: Definitions; Theorem; Operator D; Rules for finding the complementary function; Inverse operator; Rules for finding the Particular Integral; Working procedure to solve the equation; Method of Variation of Parameters;

Applications of Linear Differential Equations: Oscillatory Electrical Circuits.

[Sections: 13.1; 13.2.1; 13.3; 13.4; 13.5; 13.6; 13.7;13.8.1;14.1;14.5]

Publications, 2010.

	UNIT-4 12 Hours								
Laplace Transforms: Definition; conditions for the existence; Transforms of elementary functions; properties of Laplace Transforms; Transforms of derivatives; Transforms of integrals; Multiplication by t ⁿ ; Division by t; Inverse transforms- Method of partial fractions; Other methods of finding inverse transforms; Convolution theorem(without proof); Application to differential equations : Solution of ODE with constant coefficients using Laplace transforms.

Engineering Chemistry										
	I B. Tech. – II Semester (Code: 20CS102/CY01)									
Lectures	:	3 Hours/Week	Continuous Assessme	ent :	30					
Final Exam	:	3 Hours	Final Exam Marks	:	70					
Pre-Requisite: None.										
Course Objectives: Students will be able to										
With the principles of water characterization and treatment of water for industrial purposes and methods of producing water for potable purposes.										
	To understand the thermodynamic concepts, energy changes, concept of corrosion & its control.									
	With the conventional energy sources, solid, liquid and gaseous Fuels & knowledge of knocking and anti-knocking characteristics									
	With aim to gain good knowledge of organic reactions, plastics, conducting polymers & biodegradable polymers.									
Course Outcom	es: S	tudents will be able to								
		op innovative methods to produce at cheaper cost	soft water for industria	l use and	potable					
		their knowledge in converting va tion of different metals from corros		erent syste	ems and					
		the capacity of applying energy s is needs.	ources efficiently and	economic	ally for					
		aim to gain good knowledge of ers & biodegradable polymers	organic reactions, pla	stics, cor	ducting

UNIT-1

12 Hours

Introduction: water quality parameters

Characteristics: Alkalinity, Hardness - Estimation & simple numerical problems,

Boiler Troubles - Sludges, Scales, Caustic embrittlement, boiler corrosion, Priming and foaming; **Internal conditioning**- phosphate, calgon and carbonate methods.

External conditioning - Ion exchange process & Zeolite process WHO Guidelines, Potable water, Sedimentation, Coagulation, Filtration.

Disinfection methods: Chlorination, ozonization and UV treatment.

Salinity – Treatment of Brackish water by Reverse Osmosis and Electrodialysis. UNIT-2

12 Hours

Thermodynamic functions: energy, entropy and free energy. Estimations of entropy and free energies. Free energy and emf. Cell potentials, the Nernst equation and applications.

Corrosion: Types of corrosion - Chemical or dry corrosion, Electrochemical or wet corrosion; Galvanic, stress, pitting and differential aeration corrosion; Factors effecting corrosion, **Corrosion control** – Cathodic protection, and electro plating (Au) & electrodes Ni plating.

	UNIT-3 12 Hours
Fuels: Classific	ation of fuels; Calorific value of fuels (lower, higher)
Solid fuels: Det	termination of calorific value (Bomb Calorimeter) & related problems, Coal ranking.
Liquid Fuels: F	Petroleum refining and fractions, composition and uses. Knocking and anti- knocking
Agents, Octane	number and Cetane number; Bio fuels- Biodiesel, general methods of preparation
and advantages	
Gaseous fuels:	CNG and LPG,
Flue gas analys	sis – Orsat apparatus.
	UNIT-4 12 Hours
Organic reacti	ons and synthesis of a drug molecule
	reactions involving substitution (SN1, SN2), addition (Markownikoff's and anti-
	rules), elimination (E ₁ & E ₂), Synthesis of a commonly used drug molecule.(Aspirin
and Paracetamo	
Polymers: Con	ducting polymers: Classification, Intrinsic and Extrinsic conducting polymers and
their application	ns. Plastics: Thermoplasts and thermosetting plastics, Bskelite and PVC.
* *	polymers: types, examples-Polyhydroxybuterate (PHB), Polyhydroxybuterate-co-β-
hydroxyvalerate	e (PHBV), applications.

LIST OF EXPERIMENTS

Experiment 1: Computer Hardware Basics: PC Hardware introduces the students to a personal computer and its basic peripherals, the process of assembling a personal computer, installation of system software like MS Windows, Linux and the required device drivers. In addition, hardware and software level troubleshooting process, tips and tricks would be covered.

Every student should identify the peripherals of a computer, components in a CPU and its functions. Draw the block diagram of the CPU along with the configuration of each peripheral and submit to your instructor. Every student should disassemble and assemble the PC back to working condition.

Experiment 2: Installation of Software: Every student should individually install operating system like Linux or MS windows on the personal computer. The system should be configured as dual boot with both windows and Linux.

Experiment 3: Hardware Troubleshooting: Students have to be given a PC which does not boot due to improper assembly or defective peripherals. They should identify the problem and fix it to get the computer back to working condition.

Experiment 4: Software Troubleshooting: Students have to be given a malfunctioning CPU due to system software problems. They should identify the problem and fix it to get the computer back to working condition.

Experiment 5: Orientation & Connectivity Boot Camp: Students should get connected to their Local Area Network and access the Internet. In the process they configure the TCP/IP setting. Finally students should demonstrate how to access the websites and email.

Experiment 6: Web Browsers, Surfing the Web: Students customize their web browsers with the LAN proxy settings, bookmarks, search toolbars and pop up blockers. Also, plug-ins like Macromedia Flash and JRE for applets should be configured. Search Engines & Netiquette: Students should know what search engines are and how to use the search engines. Usage of search engines like Google, Yahoo, ask.com and others should be demonstrated by student.

Experiment 7: Cyber Hygiene: Students should learn about viruses on the internet and install antivirus software. Student should learn to customize the browsers to block pop ups, block active x downloads to avoid viruses and/or worms.

Experiment 8: Drawing flowcharts (Raptor Tool): Students should draw flowcharts for the problems validating an email id entered by user, printing first fifty numbers and preparing electricity bill.

Experiment 9: Productivity tool: Microsoft (MS) office: Importance of MS office, Details of the three tasks and features that should be covered in each, MS word – Accessing, overview of toolbars,

saving files, Using help and resources, rulers, format painter. Formatting Styles, Inserting table, Bullets and Numbering, Changing Text Direction, Cell alignment, Footnote, Hyperlink, Symbols, Spell Check, Track Changes.

Experiment 10: Practice with MS Word to create project certificate: Features to be covered: -Formatting Fonts in word, Drop Cap in word, Applying Text effects, Using Character Spacing, Borders and Colours, Inserting Header and Footer, Using Date and Time option in Word.

Experiment 11: Orientation on Spread sheet: Accessing, overview of toolbars, saving spreadsheet files, Using help and resources. Creating a Scheduler: - Gridlines, Format Cells, Summation, auto fill, Formatting Text

Experiment 12: Creating Power Point: Student should work on basic power point utilities and tools in Ms Office which help them create basic power point presentation. PPT Orientation, Slide Layouts, Inserting Text, Formatting Text, Bullets and Numbering, Auto Shapes, Lines and Arrows, Hyperlinks, Inserting Images, Tables and Charts.

Text Books :	1. Introduction to Information Technology, ITL Education Solutions limited, Pearson Education.

LIST OF EXPERIMENTS

1. Introduction to Chemistry Lab (the teachers are expected to teach fundamentals like Calibration of Volumetric Apparatus, Primary, Secondary Solutions, Normality, Molarity, Molality etc. and error, accuracy, precision, theory of indicators, use of volumetric titrations).

2. Volumetric Analysis:

- a. Estimation of Washing Soda.
- b. Estimation of Active Chlorine Content in Bleaching Powder
- c. Estimation of Mohr's salt by permanganometry.
- b. Estimation of given salt by using Ion-exchange resin using Dowex-50.

3. Analysis of Water:

- a. Determination of Alkalinity of Tap water.
- b. Determination of Total Hardness of ground water sample by EDTA method
- c. Determination of Salinity of water sample.
- 4. Estimation of properties of oil:
 - a. Estimation of Acid Value

b. Estimation	n of Saponification value.
5. Preparations	s:
a. Preparatio	on of Soap
b. Preparatio	on of Urea-formaldehyde resin
-	on of Phenyl benzoate.
Text Books :	1. Practical Engineering Chemistry by K.Mukkanti, Etal, B.S. Publicaitons,
	Hyderabad, 2009.
	2. Inorganic quantitative analysis, Vogel, 5th edition, Longman group Ltd.
	London, 1979.

DEPARTMENT OF COMPUTER SCIENCE AND ENGINEERING

Natural resources: Land: Land as a resource, Causes and effects of land degradation - Soil erosion, Desertification. **Forest**: Use of forests, Causes and effects of deforestation, Afforestation, Mining - benefits and problems. **Water**: Uses, floods and drought, Dams - benefits and problems.

Energy: Importance of energy, Environmental Impacts of Renewable and Non-renewable energy resources. Silent Valley Project and Narmada BachaoAndolan case studies

Sustainability: Definition, Concept and Equitable use of resources for sustainable development; Rain water harvesting and Watershed management. Fieldwork on Rain water harvesting and Watershed management.

UNIT-3	

8 Hours

Pollution: Definition; Causes, effects and control of air, water and nuclear pollution; Chernobyl Nuclear Disaster case study; Solid Waste: urban, Industrial and hazardous wastes; Integrated waste management - 3R approach, composting and vermicomposting.

Environmental acts: Water and air (Prevention and Control of pollution) acts, Environmental protection act, Forest Conservation act.

8 Hours

Environmental issues: Green House effect & Global warming, Ozone layer depletion, Acid rains, Green Revolution, Population Growth and environmental quality, Environmental Impact Assessment. Environmental Standards (ISO 14000, etc.)

UNIT-4

Case Studies: Bhopal Tragedy, Mathura Refinery and TajMahal, and Ralegan Siddhi (Anna Hazare).

Field work: Visit to a local area to document environmental assets – Pond/Forest/Grassland. Visit to a local polluted site- Urban and industry/ Rural and Agriculture.

Text Books :	1. "Environmental Studies" by Benny Joseph, Tata McGraw-Hill Publishing
	Company Limited, New Delhi.
	2. "Comprehensive environmental studies"- JP Sharma, Laxmi Publications.
	3. Text Book of environmental Studies – ErachBharucha
References :	1. "Environmental studies", R.Rajagopalan, Oxford University Press.
	2. "Introduction to Environmental Science", Anjaneyulu Y, B S Publications
	3. "Environmental Science", 11th Edition – Thomson Series – By Jr. G. Tyler
	Miller.

DEPARTMENT OF COMPUTER SCIENCE AND ENGINEERING

Natural resources: Land: Land as a resource, Causes and effects of land degradation - Soil erosion, Desertification. **Forest**: Use of forests, Causes and effects of deforestation, Afforestation, Mining - benefits and problems. **Water**: Uses, floods and drought, Dams - benefits and problems.

Energy: Importance of energy, Environmental Impacts of Renewable and Non-renewable energy resources. Silent Valley Project and Narmada BachaoAndolan case studies

Sustainability: Definition, Concept and Equitable use of resources for sustainable development; Rain water harvesting and Watershed management. Fieldwork on Rain water harvesting and Watershed management.

1	UNIT-3	

UNIT-4

8 Hours

Pollution: Definition; Causes, effects and control of air, water and nuclear pollution; Chernobyl Nuclear Disaster case study; Solid Waste: urban, Industrial and hazardous wastes; Integrated waste management - 3R approach, composting and vermicomposting.

Environmental acts: Water and air (Prevention and Control of pollution) acts, Environmental protection act, Forest Conservation act.

8 Hours

Environmental issues: Green House effect & Global warming, Ozone layer depletion, Acid rains, Green Revolution, Population Growth and environmental quality, Environmental Impact Assessment. Environmental Standards (ISO 14000, etc.)

Case Studies: Bhopal Tragedy, Mathura Refinery and TajMahal, and Ralegan Siddhi (Anna Hazare).

Field work: Visit to a local area to document environmental assets – Pond/Forest/Grassland. Visit to a local polluted site- Urban and industry/ Rural and Agriculture.

SEMICONDUCTORS:

Introduction to semiconductors, intrinsic and extrinsic semiconductors, carrier concentrations, Fermi level and temperature dependence, Continuity equation, Diffusion and drift, P-N junction (V-I characteristics), Metal – Semiconductor junction (Ohmic and Schottky), Semiconductor materials of interest for opto- electronic devices.

UNIT-2

UNIT-3 12 Hours

12 Hours

DEPARTMENT OF COMPUTER SCIENCE AND ENGINEERING

OPTO-ELECTRONIC DEVICES AND DISPLAY DEVICES:

UNIT-4

Photo voltaic effect, principle and working of LED, Applications of Photo diode, Solar cell, PIN & APD Diode, Liquid crystal display, Opto electric effect: Faraday Effect and Kerr effect.

NANO-MATERIALS:

12 Hours

Introduction to nano technology, quantum confinement, surface to volume ratio, properties of nano materials, synthesis of nano-materials: CVD, sol-gel methods, laser ablation.

Carbon nano tubes: types, properties, applications. Characterization of nano materials: XRD, SEM, applications of nano materials.

Text Books :	1. A text book of engineering physics by Avadhanulu and

Electrical Circuits

Electrical circuit elements (R, L and C), voltage and current sources, Kirchhoff current and voltage laws, analysis of simple circuits with dc excitation. Superposition, Thevenin and Norton Theorems. Representation of sinusoidal waveforms, peak and rms values, phasor representation, real power, reactive power, apparent power, power factor. Analysis of single-phase AC circuits consisting of R, L, C, RL, RC, RLC combinations (series and parallel), resonance. Three-phase balanced circuits, voltage and current relations in star and delta connections.

Overview of C, Constants, Variables and Data Types, Operators and Expressions, Managing I/O																	

Overview of C, Constants, Variables and Data Types, Operators and Expressions, Managing I/O Operations. Decision Making and Branching.

Programming Exercises for Unit I: C-expressions for algebraic expressions, evaluation of arithmetic and Boolean expressions. Syntactic and logical errors in a given program, output of a given program, values of variables at the end of execution of a program fragment, Programs using Scientific and Engineering formulae. Finding the largest of the three given numbers. Computation of discount amount on different types of products with different discount percentages. Finding the class of an input character, finding the type of triangle formed with the given sides, computation of income-tax, finding given year is leap year or not, and conversion of lower case character to its uppercase.

	UNIT-2	12 Hours							
Decision Making	and Looping, Arrays, Character Arrays and Strings.	12 110 010							
-	Exercises for UnitII: To print the sum of the digits of a gi	ven number and to							
0 0	e of a given number. To find whether a given number is prime								
	find prime factors of a given number. To print graphic patte								
-	the length of a string, compare strings, reverse a string, copy	•							
	n string is palindrome or not with and without using String F	-							
e e	atrix and sorting of names using arrays.	fandning i unetions.							
	autix and solving of hames using arrays.								
	UNIT-3	12 Hours							
User-defined Fur	actions, Structures and Unions, Pointers	12 110415							
	Exercises for Unit -III: Functions. Recursive functions to fin	d factorial & GCD							
	on Divisor), string operations using pointers and pointer ari								
,	les. Sorting a list of student records on register number using	••••

**BOOLEAN ALGEBRA & LOGIC GATES**: Introduction, Basic definitions, Axiomatic definition of Boolean algebra, Basic theorems and properties of Boolean algebra, Boolean functions, Canonical and Standard Forms, Other Logic Operations, Digital logic gates.

**GATE** –**LEVEL MINIMIZATION**: Introduction, The map method, Four-variable K-Map, Product-of-Sums Simplification, Don't –Care Conditions, NAND and NOR implementation, Other Two level Implementations.

MINIMIZATION: The Tabulation method, Determination of prime implicants, Selection of prime-

implicants. **COMBINATIONAL LOGIC:** Introduction, Combinational Circuits, Analysis Procedure, Design Procedure, Binary Adders - Subtractor, Decimal Adder, Magnitude Comparator, Decoders, Encoders, Multiplexers.

UNIT-3

12 Hours

**SYNCHRONOUS SEQUENTIAL LOGIC:** Introduction, Sequential Circuits, Storage Elements -Latches, Storage Elements -Flip Flops, Analysis of Clocked Sequential Circuits: State Equations, State Table, State Diagram, Flip Flop Input Equations, Analysis with D, JK and T Flip Flops; State reduction and Assignment, Design Procedure.

UNIT-4

12 Hours

**REGISTERS and COUNTERS**: Registers, Shift registers, Ripple Counters, Synchronous Counters.

**MEMORY and PROGRAMMABLE LOGIC:** Introduction, Random Access Memory: Read and Write Operations, Types of Memories; Read Only Memory, Programmable Logic Devices: PROM, PLA, PAL.

#### LIST OF EXPERIMENTS

- 1. Determination of acceleration due to gravity at a place using compound pendulum.
- 2. Study the variation of intensity of magnetic field along the axis of a circular coil usingStewart-Gee's apparatus.
- 3. Determination of thickness of thin wire using air wedge interference bands
- 4. Determination of radius of curvature of a Plano convex lens by forming Newton's rings..
- 5. Determination of wavelengths of mercury spectrum using grating normal incidencemethod.
- 6. Determination of dispersive power of a given material of prism using prism minimum eviation method.
- 7. Draw the resonant characteristic curves of L.C.R. series circuit and calculate the resonant frequency.
- 8. Draw the characteristic curves of a photocell and calculate the maximum velocity of electron.
- 9. Verify the laws of transverse vibration of stretched string using sonometer.
- 10. Determine the rigidity modulus of the given material of the wire using Torsionalpendulum.
- 11. Draw the load characteristic curves of a solar cell.
- 12. Determination of Hall coefficient of a semiconductor.

- 13. Determination of voltage and frequency of an A.C. signal using C.R.O.
- 14. Determination of Forbidden energy gap of Si &Ge.
- 15. Determination of wavelength of laser source using Diode laser.

Any three experiments are virtual

#### LIST OF EXPERIMENTS

- 1. Verification of KCL and KVL
- 2. Verification of Superposition theorem
- 3. Verification of Thevenin's theorem
- 4. Verification of Norton's theorem
- 5. Parameters of choke coil
- 6. Measurement of low and medium resistance using volt ampere method
- 7. OC & SC test of single phase transformer
- 8. Load test on single phase transformer
- 9. V-I characteristics of PN junction Diode
- 10. V-I characteristics of Zener Diode

- 11. Characteristics of CE Configuration
- 12. Transfer and Drain Characteristics of JFET
- 13. Calculation of Ripple factor using Half wave rectifier
- 14. Calculation of Ripple factor using Full wave rectifier
- 15. Non linear wave shaping clippers/clampers

Note: Minimum 10 experiments should be carried.

201 - 300	100 plus	0.70 per unit
301 and above	200 plus	1.0 per unit

2. Write a C program to evaluate the following (using loops):

- a)  $1 + x^2/2! + x^4/4! + \dots$  up to ten terms
- b)  $x + x^{3}/3! + x^{5}/5! + ...$  upto 7 digit accuracy
- 3. Write a C program to check whether the given number is
  - a) Prime or not.
  - b) Perfect or Abundant or Deficient.
- 4. Write a C program to display statistical parameters (using one dimensional array).
  - a) Mean
  - b) Mode
  - c) Median
  - d) Variance.
- 5. Write a C program to read a list of numbers and perform the following operations
  - a) Print the list.
  - b) Delete duplicates from the list.
  - c) Reverse the list.
- 6. Write a C program to read a list of numbers and search for a given number using Binary search algorithm and if found display its index otherwise display the message "Element not found in the List".
- 7. Write a C program to read two matrices and compute their sum and product.
- 8. A menu driven program with options (using array of character pointers).
  - a) To insert a student name
  - b) To delete astudent name
  - c) To print the names of students
- 9. Write a C program to read list of student names and perform the following operations
  - a) To print the list of names.
  - b) To sort them in ascending order.
  - c) To print the list after sorting.
- 10. Write a C program that consists of recursive functions to
  - a) Find factorial of a given number
  - b) Solve towers of Hanoi with three towers (A, B & C) and three disks initially on tower A.
- 11. A Bookshop maintains the inventory of books that are being sold at the shop. The list includes details such as author, title, price, publisher and stock position. Whenever a customer wants a book the sales person inputs the title and the author, and the system searches the list and displays whether it is available or not. If it is not, an appropriate message is displayed, if it is, then the system displays the book details and request for the

number of copies required, if the requested copies are available the total cost of the requested copies is displayed otherwise the message "required copies not in stock" is displayed. Write a program for the above in structures with suitable functions.

12. Write a C program to read a data file of students' records with fields ( Regno, Name, M1,M2,M3,M4,M5) and write the successful students data (percentage > 40%) to a data file.

Point estimation, Interval estimation, Tests of Hypotheses, Null Hypothesis and Tests of Hypotheses, Hypothesis concerning one mean, Comparisons-Two independent Large samples, Comparisons-Two independent small samples, Paired sample t test.

(Sections 7.1,7.2, 7.4, 7.5, 7.6, 8.2, 8.3, 8.4 of Text Book [1]) UNIT-3

12 Hours

The Estimation of variances, Hypotheses concerning one variance, Hypotheses Concerning two variances, Estimation of proportions, Hypotheses concerning one proportion, Hypotheses concerning several proportions, Procedure for Analysis of Variance (ANOVA) for comparing the means of k (>2) groups- one way classification (Completely randomized designs), Procedure

for Analysis of Variance (ANOVA) for comparing the means of k (>2) groups- two way classification (Randomized block designs). (Sections 9.1, 9.2, 9.3, 10.1, 10.2, 10.3, 12.2, 12.3 of Text Book [1]) UNIT-4 12 Hours

**Multivariate Analysis:** The concept of bivariate relationship, scatter diagram, Pearson"s correlation and correlation matrix. Simple linear regression model and assumptions, Least Squares Estimation of the parameters of the model, Testing the significance of the model. Regression versus Correlation, Multiple linear regression model with k explanatory variables and assumptions of the model. Test for significance of the regression model and individual regression coefficients. Applications of multiple regression analysis.

(1st and 2nd Chapters of Text Book [2])1

#### DEPARTMENT OF COMPUTER SCIENCE AND ENGINEERING

#### Exception Handling

#### **Multithreaded Programming**

**I/O:** I/O Basics, Reading Console Input, Writing Console Output, The Print Writer class, Reading and Writing Files, Automatically Closing a File.

UNIT-4

**The Applet Class:** Applet Architecture, An Applet Skeleton, Applet program to draw shapes, setting Color, Font using Graphics class

#### **Event Handling:**

Introducing the AWT: Window Fundamentals, AWT components: Label, Text Field, Text Area, Checkbox, Checkbox Group, Button, Layout Managers: Flow Layout, Grid Layout, and Border Layout.

**GUI Programming with Swing:** The Origins of Swing, Advantages of Swing over AWT, The MVC Connection, **Swing Components:** JLabel, JText Field, JText Area, JCheck box, JButton, JTabbed Pane, JTable, JTree, JCombo Box

3. Display the calendar for (i) Jan 2000 (ii) Feb 1999 (iii) 9th month of the year 7

A.D (iv) For the current month (v) Current Date Day Abbreviation, Month

Abbreviation along with year

- 4. Display the time in 12-Hour and 24 Hour Notations.
- 5. Display the Current Date and Current Time.
- 6. Display the message "GOOD MORNING" in enlarged characters.
- 7. Display the name of your home directory.
- 8. Create a directory SAMPLE under your home directory.
- 9. Create a subdirectory by name TRIAL under SAMPLE.
- 10. Change to SAMPLE.
- 11. Change to your home directory.
- 12. Change from home directory to TRIAL by using absolute and relative pathname.
- 13. Remove directory TRIAL.
- 14. Create a directory TEST using absolute pathname.
- 15. Using a single command change from current directory to home directory.
- 16. Remove a directory using absolute pathname.
- 17. Create files my file and your file under Present Working Directory.
- 18. Display the files my file and your file.
- 19. Append more lines in the my file and your file files.
- 20. How will you create a hidden file?.
- 21. Copy myfile file to emp.
- 22. Write the command to create alias name for a file.
- 23. Move yourfile file to dept.
- 24. Copy emp file and dept file to TRIAL directory
- 25. Compare a file with itself.
- 26. Compare myfile file and emp file.

### UNIT-2

4 Hours

The Stream editor(sed):Line addressing, multiple instructions, context addressing, writing selected lines to a file, text editing ,substitution, basic regular expressions.

File Handling and Text Processing utilities: grep, egrep, fgrep.

AWK: sample awk filtering, splitting a line into fields, formatting output, variables and expressions, comparison operators, number processing, storing awk programs in a file, the BEGIN and END sections, Built in variables and arrays, control structures.

### LIST OF EXPERIMENTS

# 1. A. Create the following file as sed.lab: unix is great os. unix is open source. unix is free os. learn operating system. Unix linux which one you choose. (*Each sentence in a line*)

- 1. Replace 'unix' with 'linux'.
- 2. Replace only the third (3rd) instance of 'unix' with 'linux'.
- 3. Try sed 's/unix/linux/g' sed.lab.
- 4. Replace 'unix' with 'linux' but only on line 3.
- 5. Add a new line, 'Actually Windows is best' after the second line.
- В.
- 1. Viewing a range of lines of a document
- 2. Viewing the entire file except a given range
- 3. Viewing non-consecutive lines and ranges
- 4. Replacing words or characters inside a range
- 5. Using regular expressions
- 6. Viewing lines containing with a given pattern
- 7. Inserting spaces in files
- 8. Performing two or more substitutions at once
- C.

- 1. Design a command **"wishme"** that will great you "good morning","good Afternoon", according to current time.
- 2. Design a command "fags" thats will list the files and their ages, to date.
- 3. Design a command "word-freq" that will print the words and number of Occurrences of that word in the given text.

	1
UNIT-3	4 Hours
Shell programming: shell, functions of shell, metacharacters, input redirections redirections, pipes, shell as a programming language, shell variables, predefined low predefined environment variables, arithmetic and conditional expressions, contripositional parameters, passing command line arguments, built in shell commands, she functions and arrays.	cal variables, col structures,
LIST OF EXPERIMENTS	
1.	
<ul> <li>A. Design a command "which" that prints the path of the command given as Argu</li> <li>B. Design a command "filelist[-c <char>]" which prints all file names beginning we charter specified as argument to the command , if the position is not specified It all the file names.</char></li> </ul>	with The should print
C. Design a command getline[-f <filename> -n <line number="">] which prints the lineno in the file specified with -f option. If the line number is not specified it sh the lines in the given file Design a command monthly file m <monthly a="" file="" in="" list="" spec<="" specified="" td="" the=""><td>ould list all</td></monthly></line></filename>	ould list all
D. Design a command <b>monthly-file[-m <month>]</month></b> which list the files created in a where month is argument to be command. If the options is not specified it list th the months.	
<ul> <li>2.</li> <li>A. Design a command list lines[-f <file name=""> -v <varname>] which prints the lingiven file file name, which containing the variable varname.if arname Is not should list, all the lines.</varname></file></li> <li>B. Design a command avg[-n <colon> -f <file name="">] which prints the average of</file></colon></li> </ul>	specified it
column in a file where <b>colon</b> and <b>file name</b> are arguments to the commands	the given
UNIT-4	4 Hours
File management System calls: Regular File management system calls: open(), real lseek(), close(), unlink(), stat(), getdents().	d(), write(),
LIST OF EXPERIMENTS	
1. Write a C program to copy data from source file to destination file, where the fip provided as command-line arguments.	ile names are
<ol> <li>Write a C program that reads every 100th byte from the file, where the file nam command-line argument.</li> </ol>	ne is given as
3. Write a C program to display information of a given file which determines the ty inode information, where the file name is given as command-line arguments.	pe of file and

### LIST OF EXPERIMENTS

- 1. Write a program to perform the following operations on Array List a). Creation, b). Insertion, c). Deletion, d). Search, e). Display.
- 2. Write a program that reads two lists of elements, prints them, reverses them, prints the reverse list, sort the lists, print the sorted lists, merges the list, prints merge list using array list.
- Write a program to perform the following operations on Single Linked List.
   a). Creation, b). Insertion, c). Deletion, d). Search, e). Display.
- 4. Write a program to perform the following operations on Doubly Linked List. a). Creation, b). Insertion, c). Deletion, d). Search, e). Display.
- 5. Write a program to perform addition and multiplication of two polynomials using single Linked List.
- 6. Write a program to convert the given infix expression into postfix expression using stack.
- 7. Write a program to evaluate the postfix expression using stack.
- 8. Write a program that performs Radix sort on a given set of elements using queue.

- 9. Write a program to read n numbers in an array. Redisplay the array list with elements being sorted in ascending order using the following techniquesa). Bubble Sort, b). Selection Sort, c). Insertion Sort, d).Shell Sort.
- 10. Write a program to perform Binary Search tree operations and traversals.
- 11. Write a program to implement AVL tree that interactively allows
- a). Insertion, b). Deletion, c). Find_min, d). Find_max.
- 12. Write a program to read n numbers in an array. Redisplay the arraylist with elements being sorted in ascending order using Heap Sort.

### DEPARTMENT OF COMPUTER SCIENCE AND ENGINEERING

II B. Tech. – III Semester (Code:	: 20CS306/MC02)										
II B. Tech. – III Semester (Code: 20CS306/MC02)											
Hours/Week	Continuous Assessment	:	30								
	Final Exam Marks	:									

Pre-Requisite: None.

Course Objectives: Students will be able to

	Comprehend a specific set of behavior and values any professional must know and
$\succ$	must abide by, including confidentiality, honesty and integrity. Understand
	engineering as social experimentation.

- Know, what are safety and Risk and understand the responsibilities and rights of an engineer such as collegiality, loyalty, bribes/gifts.
- Recognize global issues visualizing globalization, cross-cultural issues, computer ethics and also know about ethical audit
- Discuss case studies on Bhopal gas tragedy, Chernobyl and about codes of Institute of Engineers, ACM

Course Outcomes: Students will be able to

CO1	Acquires the basic concepts of Professional ethics and human values & Students
COI	also gain the connotations of ethical theories.
CO2	Knows the duties and rights towards the society in an engineering profession
CO3	Would realize the importance and necessity of intellectual property rights.
CO4	Debate on Ethical Theories like Kohlberg's Theory, Gilligan's Argument.

mapp	ing of (	g of Course Outcomes with Program Outcomes & Program Speci PO's										PSO's

UNIT-1

8 hours

**Human Values**: Morals, Values and Ethics, Integrity, Work Ethics, Service and Learning, Civic Virtue, Respect for Others, Living Peacefully, Caring and Sharing, Honesty, Courage, Value Time, Cooperation, Commitment and Empathy, Spirituality, Character.

**Engineering Ethics**: History of Ethics, Engineering Ethics, Consensus and Controversy, Profession and Professionalism, Professional Roles of Engineers, Self Interest, Customs and Religion, Uses of Ethical Theories, Professional Ethics, Types of Inquiry, Kohlberg's Theory, Gilligan's Argument, Heinz's Dilemma.

**Engineering as Social Experimentation**: Comparison with Standard Experiments, Knowledge Gained, Conscientiousness, Relevant Information, Learning from the Past, Engineers as Managers, Consultants, and Leaders, Accountability, Roles of Codes, Codes and Experimental Nature of Engineering.

UNI1-2	8 hours
Engineers' Responsibility for Safety and Risk: Safety and Risk, Types of Risk	s, Safety and the
Engineer, Designing for Safety, Risk-Benefit Analysis, Accidents.	

 Responsibilities and Rights: Collegiality, Two Senses of Loyalty, Obligations of Loyalty, Misguided Loyalty, Professionalism and Loyalty, Professional Rights, Professional Responsibilities, Conflict of Interest, Self-interest, Customs and Religion, Collective Bargaining, Confidentiality, Acceptance of Bribes/Gifts, Occupational Crimes, Whistle Blowing.

 UNIT-3

 8 hours

 Global Issues: Globalization, Cross-cultural Issues, Environmental Ethics, Computer Ethics, Weapons Development, Ethics and Research, Analyzing Ethical Problems in Research, Intellectual Property Rights (IPRs).

 Ethical Andite Development, Ethics of Device Problems

**Ethical Audit:** Aspects of Project Realization, Ethical Audit Procedure, The Decision Makers, Variety of Interests, Formulation of the Brief, The Audit Statement, The Audit Reviews.

UNIT-4 8 hours											
Case Studies: Bhopal Gas Tragedy, The Chernobyl Disaster.											
	Appendix 1: Institution of Engineers (India): Sample Codes of Ethics. Appendix 2: ACM Code of Ethics and Professional Conduct.

Databases Approach, Approach.																
Database S	-			-												

**Database System Concepts and Architecture :** DataModels, Schemas and Instances ,Three-SchemaArchitecture and Data Independence, Database Languages and Interfaces, The Database System Environment, Centralized and Client/Server Architectures for DBMSs.

**Data Modeling Using the Entity-Relationship (ER) Model :** Using High-Level Conceptual Data Models forDatabase Design, An Example Database Application, Entity Types, Entity Sets, Attributes, and Keys - Relationship Types, Relationship Sets, Roles, and Structural Constraints, Weak Entity Types, Refining the ER Design for the COMPANY Database - ER Diagrams, Naming Conventions, and Design Issues

UNIT-2 12 hours
-----------------

**The Relational Algebra and Relational Calculus** : Unary Relational Operations: SELECT and PROJECT, Relational Algebra Operations from Set Theory, Binary Relational Operations: JOIN and DIVISION, The Tuple Relational Calculus, The Domain Relational Calculus.

**Schema Definition, Constraints, Queries, and Views** : SQL Data Definition and Data Types, Specifying Constraints in SQL, Schema Change Statements in SQL, Basic Queries in SQL, INSERT, DELETE, and UPDATE Statements in SQL, Views (Virtual Tables) in SQL

UNIT-3	12 hours
Indexing Structures for Files: Types of Single-Level Ordered Indexes, Multi	level Indexes -
Dynamic Multilevel Indexes Using B+-Trees.	

**Functional Dependencies and Normalization for Relational Databases:** Informal Design Guidelines for Relation Schemas, Functional Dependencies, Normal Forms Based on Primary Keys - General Definitions of Second and Third Normal Forms, Boyce-Codd Normal Form.

**Relational Database Design Algorithms and Further Dependencies:**Properties of Relational Decompositions -Lossless Join Decomposition and Dependency Preserving Decomposition, Multi-valued Dependencies and Fourth Normal Form, Join Dependencies and Fifth Normal Form.

UNIT-412 hoursIntroduction to Transaction Processing Concepts and Theory: Introduction to TransactionProcessing, Transaction and System Concepts, Desirable Properties of Transactions, CharacterizingSchedules Based on Recoverability, Characterizing Schedules Based on Serializability

**Concurrency Control Techniques:** Two-Phase Locking Techniques for Concurrency Control, Concurrency Control Based on Timestamp Ordering, Validation (Optimistic) Concurrency Control Techniques, Multiple Granularity.

**Database Recovery Techniques :**Recovery Techniques Based on Deferred Update, Recovery Techniques Based on Immediate Update, Shadow Paging.

**Dynamic Programming:** General method, applications-0/1 knapsack problem, Travelling salesperson problem, Longest common sequence algorithm, Multi stage graphs using Forward& Backward approach, Reliability design.

**Graph** Applications: Graph traversals – Depth first, Breadth first, Bio Connected Components, Strongly Connected Components.

	UNIT-4	12 hours
Backtracking: Ge	eneral method, applications-n-queen problem, sum of subsets problem	lem. Branch and
Bound: General m	ethod, applications- 0/1 knapsack problem-LC Branch and Bound	l solution.
NP-Hard and NP	-Complete problems: Basic concepts, non-deterministic algorithm	ns, NP-Hardand
NP Complete class	ses, Cook's theorem.

**Files I/O:**persistence, opening files, text files and lines, reading files, searching through a file, letting the user choose the file name, using try except and open, writing files.

Lists: a list is a sequence, lists are mutable, traversing, operations, slices, methods, deleting elements, functions, strings, parsing lines, objects and values, aliasing, arguments.

**Dictionaries:** dictionary as a set of counters, dictionaries and files, looping and dictionaries, advanced text parsing.

**Tuples**: tuples are immutable, comparing tuples, tuple assignment, dictionaries and tuples, multiple assignment with dictionaries, the most common words, using tuples as keys in dictionaries, sequences.

**Object-Oriented Programming:** Managing Larger Programs, Using Objects, starting with Programs, Subdividing a Problem–Encapsulation, First Python Object, Classes as Types, Object Lifecycle, Many Instances, Inheritance.

**Using Databases and SQL:** Database concepts, Database Browser for SQLite, creating a database table, Structured Query Language summary, Basic data modeling, Programming with multiple tables, three kinds of keys, Using JOIN to retrieve data.

### LIST OF EXPERIMENTS

1. Write a python program to check if the number is positive or negative or zero and display an appropriate message.

2. Write a python program to take a string from user and count number of vowels present and percentage of vowels in it.

- 3. Write a python program to find the most frequent words in a text file.
- 4. Write a Python Program to Find the Sum of first n Natural Numbers.
- 5. Write a python program to find the numbers which are divisible by 7 and multiple of 5 between 1500 and 2700.
- 6. Write a Python Program to solve Quadratic Equation.
- 7. Create a program that ask the user for a number and then prints out a list of all the divisors of that number.
- 8. Write a Python Program to Find HCF or GCD.
- 9. Write a Python Program to Find LCM.
- 10. Write a Python program to construct the following pattern, using a nested loop number.
  - 1 22 333 4444 55555 666666
- 11. Write a Python Program to sort the given words in Alphabetic Order.
- 12. Write a Python function to create the HTML string with tags around the word(s).
- 13. Write a Python program to reverse words in a string.
- 14. Write a Python program to strip a set of characters from a string.
- 15. Write a python function to find the maximum and minimum of a list of numbers.
- 16. Write a Python Program to Find the Square Root.
- 17. Write a Python Program to Convert Decimal to Binary Using Recursion.
- 18. Write a python recursive function to a find the factorial of a given number.
- 19. Write a python program to find the longest word in each line of given file.

20. Write a Python program to combine each line from first file with the corresponding line in second file.

21. Write a Python program to read a random line from a file.

- 23. Write a Python program to split a list every Nth element.
  - Sample list: ['a', 'b', 'c', 'd', 'e', 'f, 'g', 'h', 'i', 'j', 'k', 'l', 'm', 'n']

Expected Output: [['a', 'd', 'g', 'j', 'm'], ['b', 'e', 'h', 'k', 'n'], ['c', 'f', 'i', 'l']] 24. Write a Python program to compute the similarity between two lists. Sample data: ["red", "orange", "green", "blue", "white"], ["black", "yellow", "green", "blue"] Expected Output: Color1-Color2: ['white', 'orange', 'red'] Color2-Color1: ['black', 'yellow'] 25. Write a Python program to replace the last element in a list with another list. Sample data: [1, 3, 5, 7, 9, 10], [2, 4, 6,8] Expected Output: [1, 3, 5, 7, 9, 2, 4, 6, 8] 26. Write a Python program to find the repeated items of a tuple. 27. Write a Python program to convert a list with duplicates to a tuple without duplicates. 28. Write a Python program to reverse the elements of a tuple. 29. Write a Python program to replace last value of tuples in a list. Sample list: [(10, 20, 40), (40, 50, 60), (70, 80, 90)] Expected Output: [(10, 20, 100), (40, 50, 100), (70, 80, 100)] 31. Write a Python program to combine two dictionaries by adding values for common keys.  $d1 = \{$ 'a': 100, 'b': 200, 'c': 300 $\}$  $d2 = \{ 'a': 300, 'b': 200, 'd': 400 \}$ Sample output: Counter({'a': 400, 'b': 400, 'd': 400, 'c': 300}) 33. Write a Python program to create and display all combinations of letters, selecting each letter from a different key in a dictionary. Sample data : {'1':['a','b'], '2':['c','d']} Expected Output: ac ad bc bd 34. Write a Python program to get the top three items in a shop. Sample data: {'item1': 45.50, 'item2':35, 'item3': 41.30, 'item4':55, 'item5': 24} Expected Output: item4 55 item1 45.5 item3 41.3 35. Write a Python program to match both key values in two dictionaries. Sample dictionary: {'key1': 1, 'key2': 3, 'key3': 2}, {'key1': 1, 'key2': 2} Expected output: key1: 1 is present in both x and y 36. Write a Python class named Rectangle constructed by a length and width and a method which will compute the area of a rectangle. 37. Write a Python class named Circle constructed by a radius and two methods which will compute the area and the perimeter of a circle. 38. Write a Python program to create a Single Linked List using classes. 39. Write a Python program to create a FIFO queue using classes. 40. Predict the output of following Python programs and write the justification. class X(object): def init (self,a): self.num = adef doubleup(self): self.num *= 2class Y(X): def init (self,a): X. init (self, a) def tripleup(self): self.num *= 3obj = Y(4)print(obj.num)

obj.dou print(ol

## DEPARTMENT OF COMPUTER SCIENCE AND ENGINEERING

RDBMS Lab										
		II B.Tech – IV Semester (Code:	20CSL403/CC13)							
Practicals	:	3 Hours/Week	Continuous Assessment	:	30					
Final Exam	:	3 hours	Final Exam Marks	:	70					

### Pre-Requisite: None.

### **Course Objectives:** Students will be able to

- > Analyze the student on database languages.
- > Interpret the Knowledge on database design.
- > Determine the knowledge on key constraints and Normalization.
- > Determine the knowledge on procedures and functions.

### **Course Outcomes**: Students will be able to:

CO1	Design database by using ER Diagrams
CO2	Implement DDL, DML, DCL Commands using SQL.

- CO3 Apply key constrains to get a normalized database.
- CO4 Implement procedures and functions using PL/SQL
- CO4 Implement procedures and functions using PL/SQL

		PO's												PSO's	
CO	1	2	3	4	5	6	7	8	9	10	11	12	1	2	3
CO1	3	3	3	3	3	-	-	2	-	2	-	3	3	3	3

CO3	3	3	3	3	3	-	-	2	-	2	-	3	3	3	3
CO4	3	3	3	3	3	-	-	2	-	2	-	3	3	3	3

### LIST OF EXPERIMENTS

### Experiment 1: Working with ER Diagram

Example: ER Diagram for Sailors Database

Entities:

- 1. Sailor
- 2. Boat Relationship: Reserves Primary Key Atributes:
- 1. SID (Sailor Entity)
- 2. BID (Boat Entity)

### Experiment 2: Working with DDL, DML, DCL and Key Constraints

Creation, Altering and Dropping of Tables and Inserting Rows into a Table (Use Constraints While Creating Tables) Examples Using Select Command.

### **Experiment 3: Working with Queries and Nested QUERIES**

Queries (along with sub Queries) using ANY, ALL, IN, EXISTS, NOTEXISTS, UNION, INTERSET, Constraints

### Expriment 4: Working with Queries USING Aggregate Operators & views

Queries using Aggregate Functions (COUNT, SUM, AVG, MAX and MIN), GROUP BY, HAVING and Creation and Dropping of Views

**Experiment 5: Working with Conversion Functions & String Functions** 

Queries using Conversion Functions (TO_CHAR, TO_NUMBER AND TO_DATE), String Functions (CONCATENATION, LPAD, RPAD, LTRIM, RTRIM, LOWER, UPPER, INITCAP, LENGTH, SUBSTR AND INSTR), Date Functions (SYSDATE, NEXT_DAY, ADD_MONTHS, LAST_DAY, MONTHS_BETWEEN), LEAST, GREATEST, TRUNC, ROUND, TO_CHAR, TO_DATE

### Experiment 6: Working with LOOPS using PL/SQL

Program Development using WHILE LOOPS, FOR LOOPS, Nested Loops using ERROR Handling.

### Experiment 7: Working with Functions Using PL/SQL

Program Development using Creation of Stored Functions, Invoke Functions in SQL Statements and Write Complex Functions.

### **Experiment 8: Working with Stored Procedures**

Programs Development using Creation of Procedures, Passing Parameters IN and OUT of

### PROCEDURES

### **Experiment 9: Working with CURSORS**

Develop Programs using Features Parameters in a CURSOR, FOR UPDATE CURSOR, WHERE CURRENT of Clause and CURSOR Variables.

Experiment 10: Working with Triggers using PL/SQL

Develop Programs using BEFORE and AFTER Triggers, Row and Statement Triggers and INSTEAD OF Triggers

<b>Text Books :</b>	1. Oracle PL/SQL by Example, Benjamin Rosenzweig, Elena Silvestrova,
	Pearson Education 3rdEd
	2. Oracle Database Logic PL/SQL Programming, ScottUrman, TataMc-Graw
	Hill.
	3. SQL and PL/SQL for Oracle 10g, Black Book, Dr.P.S.Deshpande

UNIT-I

15 Periods

Automata: Why Study Automata Theory, The central concepts of automata theory - Alphabets, Strings, Languages, Problems.

**Finite Automata:** An Informal picture of finite automata, Deterministic finite automata (DFA) - Definition of DFA, DFA processing strings, Notations for DFA, Extended transition function, the language of DFA, Non deterministic finite automata (NFA) – Definition of NFA, Extended transition function, the language of NFA, Equivalence of DFA and NFA.

Automata with  $\epsilon$  transitions: Use of  $\epsilon$  - transition, notation for an  $\epsilon$  - NFA, Epsilon closures, extended transitions and languages, Eliminating  $\epsilon$  - transitions.

DEPARTMENT OF COMPUTER SCIENCE AND ENGINEERING

**Regular Expressions and Languages:** Regular expressions, finite automata and regular expressions, Algebraic laws of regular expressions.

**Properties of Regular Languages:** Proving languages are not regular – Pumping lemma for regular languages, Applications of the pumping lemma, Closure Properties of Regular Languages, Equivalence and minimization of automata – Minimization of DFA.

UNIT-3
--------

15 Periods

(Construction based treatment & proofs are excluded)

**Context Free Grammars:** Context Free Grammars, Parse Trees, ambiguous grammars. **Pushdown Automata:** Definition of the Pushdown automata, the languages of PDA, Equivalences of PDA's and CFG's.

**Context free languages:** Normal form's for context- Free grammars, the pumping lemma for context free languages.

UNIT-4

15 Periods

**Properties of Context free languages:** closure properties for context free languages, Decision properties for CFL's.

**Introduction to Turing Machines:** The Turing Machine, programming techniques forTuring machines.

**Undecidability:** a language that is not recursively enumerable, an undecidable problem that is RE, Undecidability problems about TM, Post's Correspondence problem.

**Digital Data Communication Techniques:** Asynchronous & Synchronous Transmission, Types of Errors, Error Detection, Error Correction.

### UNIT-2

16 Hours

DATA Link Control: Flow Control, Error Control.

**Network Layer:** Network Layer Design Issues: Store-and-Forward Packet Switching, Services Provided to the Transport Layer, Implementation of Connectionless Service, Implementation of Connection-Oriented Service, Comparison of Virtual-Circuit & Datagram Subnets.

**Routing Algorithms:** The Optimality Principle, Shortest Path Routing, Flooding, Distance Vector Routing, Link State Routing, Hierarchical Routing.

**Congestion Control Algorithms:** General Principles of Congestion Control, Congestion Prevention Policies, Congestion Control in Virtual-Circuit Subnets, Congestion Control in Datagram Subnets, Load Shedding, Jitter Control.

Dutugrum Duo	neis, Eoud Shedding, Shter Control.	1
	UNIT-3	16 Hours
- •	rvice: Requirements, Techniques for Achieving Good Quality	
Network Laye	r in the Internet: The IP Protocol, IP Addresses, Internet Control	Protocols. The
Transport La	yer, The Transport Service: Services Provided to the Upper La	yers, Transport
Service Primit	ives, Berkeley sockets	
Elements of	Transport Protocols: Addressing, Connection Establishmet	nt, Connection
Release, Flow	Control and Buffering, Multiplexing, Crash Recovery.	
	UNIT-4	14 Hours
The Internet	Transport Protocol (UDP): Introduction to UDP, Remote Proc	edure Call, The
Real-Time Tra	ansport Protocol.	
The Internet	Transport Protocols (TCP): Introduction to TCP, The TCP	Service Model,
The TCP Pro	otocol, The TCP Segment Header, TCP Connection Estab	lishment, TCP
Connection R	elease, Modeling TCP Connection Management, TCP Transr	nission Policy,
TCP Congesti	on Control, TCP Timer Management.	
Application I	Layer: The Domain Name System (DNS): The DNS Name S	pace, Resource
Records, Nam	e Servers.	-

**REQUIREMENTS ENGINEERING**: A Bridge To Design and Construction, Requirements Engineering Tasks, Initiating the Requirements Engineering Process, Eliciting Requirements, Developing Use-cases, Building the Analysis Model, Negotiating Requirements, Validating Requirements.

DEPARTMENT OF COMPUTER SCIENCE AND ENGINEERING

**BUILDING THE ANALYSIS MODEL**: Requirements Analysis, Analysis Modeling Approaches, Data Modeling Concepts, Flow-Oriented Modeling, Class Based Modeling Creating a Behavioral Model.

UNIT-3 15 Periods

**DESIGN ENGINEERING**: Design within the Context of Software Engineering, Design Process and Design Quality, Design Concepts The Design Model, Pattern Based Software Design.

**CREATING AN ARCHITECTURAL DESIGN**: Software Architecture, Data Design, Architectural Styles and Patterns, Architectural Design, Assessing Alternative Architectural Designs.

**MODELING COMPONENT-LEVEL DESIGN**: What Is a Component?, Designing Class-Based Components, Conducting Component-Level Design, Designing Conventional Components.

**PERFORMING USER INTERFACE DESIGN**: The Golden Rules, User Interface Analysis and Design, Interface Analysis, Interface Design Steps, Design Evaluation.

UNIT-4

15 Periods

**SOFTWARE PROCESS AND PROJECT METRICS**: Introduction: Metrics Process and Project Domains, Software Measurement, Metrics for Software Quality, Integrating Metrics with Process.

**SOFTWARE QUALITY ASSURANCE**: Quality Concepts, Quality Movement, SQA, Software Reviews, Formal Technical Reviews, Formal Approaches to SQA, Software Reliability, ISO 9000 Quality Standards, SQA Plan.

**SOFTWARE TESTING STRATEGIES**: Strategic Approach, Strategic Issues, Test strategies for Conventional Software, White box testing, Black Box testing, Test strategies for Object Oriented Software, Validation Testing, System Testing, The Art of Debugging.

<b>Data Warehousing and Data Mining</b> (Professional Elective – I)															
III B.Tech – V Semester (Code: 20CS504/PE1B)															
Lectures	: 3 Hours /week								Continuous Assessmen				nt	:	30
Final Exam	: 3 Hours								Final Exam Marks					:	70
Pre-Requisite: Database Management Systems (20CS403) and basic mathematics															
Course Objectives: Students will be able to															
>	Identify the scope and necessity of Data Warehousing & Mining for the society.														
►	Understand importance of data, data preprocessing techniques to solve the real time problems.														
< <	Understand and implement classical models and algorithms in data warehouses and data mining.														
~	Develop skill in selecting the appropriate data mining algorithm for solving practical problems.														
Course Outcomes: Students will be able to															
CO1	Understand scope and necessity of Data Warehousing & Mining for the society.														
CO2	Understand, implement preprocessing techniques and classification models and develop skills in selecting appropriate preprocessing and classification algorithms.														
CO3	Understand, implement classical models and develop skills in selecting appropriate association rule mining algorithms.														
CO4	Understand, implement clustering models and develop skills in analyzing appropriate clustering algorithms to solve real time problems.

#### LIST OF EXPERIMENTS

- 16. Write down the problem statement for a suggested system of relevance.
- 17. Do requirement analysis and develop Software Requirement Specification Sheet(SRS) for suggested system.

3

3

1

1

- 18. To perform the function oriented diagram: Data Flow Diagram (DFD) and Structured chart.
- 19. To perform the user's view analysis for the suggested system: Use case diagram.
- 20. To draw the structural view diagram for the system: Class diagram, object diagram.
- 21. To draw the behavioral view diagram : State-chart diagram, Activity diagram
- 22. To perform the behavioral view diagram for the suggested system : Sequence diagram,Collaboration diagram
- 23. To perform the implementation view diagram: Component diagram for the system.
- 24. To perform the environmental view diagram: Deployment diagram for the system.
- 25. To perform various testing using the testing tool unit testing, integration testing

for a samplecode of the suggested system.

Note: Minimum 8 experiments should be carried.

### List of Practical's

Choose any one project and do the above exercises for that project

- 1. Student Result Management System
- 2. Library management system
- 3. Inventory control system
- 4. Accounting system
- **5.** Fast food billing system
- 6. Bank loan system
- 7. Blood bank system
- **8.** Railway reservation system
- 9. Automatic teller machine
- **10.** Video library management system
- **11.** Hotel management system
- 12. Hostel management system
- 13. E-ticking
- **14.** Share online trading
- **15.** Hostel management system
- **16.** Resource management system
- **17.** Court case management system

Origin of Mathematics: The Decimal System in Harappa, Panini and Formal Scientific Notation,

The Indian Numeral System, Emergence of Calculus, The Spread of Indian Mathematics, The Concept of Zero.

#### Astronomy and Astrology

**TKS and the Indian Union:** Protection and the Legislative Frameworks in India, Comment, Sui Generis System, Trade Secrets and Know-how, Geographical Indications Bill, Protection of Plan varieties and Farmers Rights Bill, Rights of Communities, Monitoring Information on Patent Applications World-wide.

NIT-4	8 Hours

**Common Yoga Protocol:** Introduction, What is Yoga? Brief History and Development of Yoga, The fundamentals of Yoga,

**General Guidelines for Yoga Practice:** Before the practice, During the Practice, After the Practice, Food for Thought, How Yoga can Help.

Invocation, 2. Sadilaja/Cālana Kriyās /Loosening Practices,

UN

Yogāsanas:

Standing Postures: Tāḍāsana (Palm Tree Posture), Vṛkṣāsana (The Tree Posture), Pāda-Hastāsana (The Hands to Feet Posture), Ardha Cakrāsana (The Half Wheel Posture), Trikonāsana (The Triangle Posture)

Sitting Postures: Bhadrāsana (The Firm/Auspicious Posture), Vajrāsana (Thunderbolt Posture), Usţrāsana (Camel Posture), Śaśakāsana (The Hare Posture), Vakrāsana (The Spinal Twist Posture),

Kapālabhāti 5. Prānāyāma: nadīśodhana or anuloma viloma prānāyāma (Alternate Nostril Breathing), Śītalī Prāņāyāma, Bhrāmarī Prāņāyāma (Bhrāmarī Recaka) 6. Dhyāna 7. Sankalpa 8. Śantih pātha

#### DEPARTMENT OF COMPUTER SCIENCE AND ENGINEERING

Machine Learning						
		III B. Tech. – VI Semester (Cod	e: 20CS602/CC19)			
Lectures	:	2 Hours/Week, 1 Tutorial/Week	Continuous Assessment	:	30	
Final Exam	:	3 hours	Final Exam Marks	:	70	

**Pre-Requisite**: Basic Calculus and Probability

#### Course Objectives: Students will be able to

- Learn a Regression Model.
- Comprehend a Supervised Learning Model.
- Apply Ensemble methods for improving the performance of a Learning Model.
- > Apply an Unsupervised Learning Model.

Course Outcomes: Students will be able to

CO1	Understand a very broad collection of machine learning algorithms, problems and apply
	the correct regression model for the given problem and implement it.
CO2	Analyze the supervised discriminative and generate models for the given problem and
	implement it.
CO3	Identify the supervised strong learning model for the given problem and implement it.
CO4	Learn the basics of the learning problem with hypothesis, version spaces and choose the
C04	correct clustering algorithm for the given problem and implement it.

UNIT-115 HoursMachine learning basics: What is machine learning? Key terminology, Types of Machine<br/>Learning Systems, how to choose the right algorithm, Steps in developing a machine learning<br/>application, Main Challenges of Machine Learning Essential Python Libraries: Scikit-learn,<br/>NumPy, matplotlib, Pandas. A First Application: Classifying iris species using Sci-kit learn.<br/>Linear Regression: Simple linear regression. Optimization of model parameters using Batch<br/>gradient decent algorithm, Mini batch gradient decent algorithm and Stochastic gradient descent<br/>algorithm, Multiple linear regression, locally weighted linear regression, Polynomial Regression.

Regularized Linear Models- Ridge Regression and Lasso Regression

**Regularization:** Bios Variance tradeoff, L1 and L2 regularization.

UNIT-2	8 Hours
Generative Classifiers: Classifying with Bayesian decision theory, Bayes' rule,	Naïve Bayes
classifier.	
Discriminative Classifiers: Logistic Regression, Decision Trees: Training and	Visualizing a
Decision Tree, Making Predictions, Estimating Class Probabilities, The CART Traini	ng Algorithm,

Attribute selection measures- Gini impurity; Entropy, Regularization Hyperparameters, Regression Trees, Linear Support vector machines. UNIT-3 8 Hours Evaluation of a Classifier: Measuring Accuracy Using Cross-Validation, Confusion Matrix, Precision and Recall, Precision/Recall Trade-off, The ROC Curve. Ensemble Learning: Voting Classifiers, Bagging and Pasting, Random Forests, Boosting-AdaBoost and Gradient Boosting. UNIT-4 8 Hours Computational Learning Theory: Introduction, probably learning an approximately correct hypothesis, sample complexity for finite hypothesis spaces. Instance-based Learning: Introduction, K-nearest neighbors. Unsupervised Learning: K-means clustering algorithm, Hierarchical clustering algorithm, Gaussian mixture model. Text Books : 1. Hands-On Machine Learning with Scikit-Learn, Keras, and TensorFlow, Second Edition, Aurelien Geron, O'Reilly publishers, ISBN: 781492032649. 2. Andreas C. Muller and Sarah Guido. # BAPATLA ENGINEERING COLLEGE:: BAPATLA

### (Autonomous) DEPARTMENT OF COMPUTER SCIENCE AND ENGINEERING

		s <b>trial IOT</b> ed Elective – II)		
		ster (Code: 20CS605/JO2B)		
Lectures	: 3 Hours/Week	Continuous Assessment	:	30
Final Exam	: 3 hours	Final Exam Marks	:	70
Pre-Requisite	: Basic Knowledge of Hardwar	e and Programming		
Course Objec	tives: Students will be able to			
	ke the students to know the IoT of	challenges and architectures.		
Pro		technologies and the standards relation	ating to	the
	rnet of Things.	8	0	
> Uno	lerstanding the concept of M2M	(machine to machine) with necessar	y protoc	ols.
> Des	ign and develop skills on IoT ap	plications.		
	mes: Students will be able to			
	lerstand the basics of physical ar			
	uire skills required for developm			
	ate the IoT applications for real	d on M2M and design methodology		
	ate the for applications for rear			
	UNIT-1		(12 H	ours)
Introduction	to IoT:			
		IoT, characteristics of IoT, physical es, IoT levels & deployment templat		of IoT,
	UNIT-2		(10 H	ours)
Elements of I	oT:			
Communicatio		Raspberry Pi), Sensors, Actuators, h, 6LoPAN, and MQTT), Software		
	UNIT-3		(10 H	ours)
M2M and Io	Γ Design Methodology:		(1011	oursj
		2M and IoT, IoT Design Methodol	ogy.	
~	UNIT-4		<u>(14 H</u>	· · · · ·
Service Provid Aspects, <b>Case Studies</b>	ler for IoT Applications, Introduc	n, IoT with Cloud – Challenges, Selection to Fog Computing, Cloud Comp on Detection, Smart Parking, Weatl	outing: S	ecurity

### DEPARTMENT OF COMPUTER SCIENCE AND ENGINEERING

- b. Controller operations
- 6. Code Angular applications to demonstrate
  - a. Data binding.
  - b. Directives
  - c. Data sharing between parent/child components.

7. Create an Angular CRUD application that interacts with a REST API.

considering few test data sets.

- 7. Write a program to implement the Random Forest classifier for a sample training data set stored as a .CSV file. Compare the performance of the classifier with any weak classifier, considering few test data sets.
- 8. Write a program to implement the AdaBoost classifier for a sample training data set. Compare the performance of the classifier with Random Forest classifier, considering few test data sets.
- 9. Apply k-Means algorithm to cluster a dataset.
- 10. Apply Hierarchical clustering algorithm to cluster a dataset.

ADVANCED	ALITOMATION CONCEPTS & TECHNIQUES D 1' L ( 1 (' D '
	AUTOMATION CONCEPTS & TECHNIQUES: Recording Introduction - Basic
	Recording - Web Recording - Input/Output Methods - Screen Scraping - Data
	raping advanced techniques - Selectors - Defining and Assessing Selectors -
	- Debugging - Dynamic Selectors - Partial Selectors - RPA Challenge - Image, Text
	Citrix Automation - Introduction to Image & Text Automation - Image based
	Leyboard based automation - Information Retrieval - Advanced Citrix Automation
challenges - Be	est Practices - Using tab for Images - Starting Apps - Excel Data Tables & PDF -
Data Tables in	RPA - Excel and Data Table basics - Data Manipulation in excel - Extracting Data
from PDF - Ext	tracting a single piece of data - Anchors - Using anchors in PDF
	UNIT-4 (16 Hours)
HANDLING U	JSER EVENTS & ASSISTANT BOTS, EXCEPTION HANDLING: What are
assistant bots?	- Monitoring system event triggers - Hotkey trigger - Mouse trigger - System trigger
- Monitoring i	image and element triggers - An example of monitoring email - Example of
monitoring a co	opying event and blocking it - Launching an assistant bot on a keyboard event.
EXCEPTION I	HANDLING: Debugging and Exception Handling - Debugging Tools - Strategies
	les - Catching errors.

Exchange of Public Keys, ISAKMP (Internet Security Association and Key Management Protocol), SKIP (Simple Key Management for Internet Protocols), Key Exchange Algorithm, Certificate Management, Encryption Cracks, Summary.

Business-to-Business Commerce:- Overview of Business-to-Business Commerce, Examples of Business-to-Business Electronic Commerce, Business-to-Business Electronic Commerce Platforms, Obstacles Facing Business-to-Business Electronic Commerce, Business-to-Business Electronic Commerce Systems, Structured Alphanumeric Data, Structured Documents or Forms, EDI Messaging, Security of EDI, Relation of EDI with Electronic Funds Transfer, Electronic Billing, EDI Integration with Business Processes, Standardization of the Exchanges of Businessto-Business Electronic Commerce, Summary.

UNIT-3	16 Hours
SSL (Secure Sockets Layer):- General Presentation of the SSL Protocol, SSL	Subprotocols,
Example of SSL Processing, Performance Acceleration, Implementations, Summa	ry.
TLS (Transport Layer Security) and WTLS (Wireless Transport Layer Security):-	- From SSL to
TLS, WTLS, Summary.	
<b>The SET Protocol</b> :- SET Architecture, Security Services of SET, Certification Transaction, Optional Procedures in SET, SET Implementations, Evaluation, Sum	, U

UNIT-4	16 Hours
Composite Solutions:- C-SET and Cyber-COMM, Hybrid SSL/SET Architectur	re, 3-D Secure,
Payments with CD-ROM, Summary.	

Micropayments and Face-to-Face Commerce:- Characteristics of Micropayment Systems, Potential Applications, Chipper, GeldKarte, Mondex, Proton, Harmonization of Electronic Purses, Summary.

Remote Micropayments:- Security without Encryption: First Virtual, NetBill, KLELine, Millicent, PayWord, MicroMint, eCoin, Comparison of the Different First-Generation Remote Micropayment Systems, Second-Generation Systems, Summary.

DEPARTMENT OF COMPUTER SCIENCE AND ENGINEERING

Definition File, Service Configuration File and Role Properties. Cloud applications using ASP.NET.

Windows Azure Storage - Local Storage Vs Azure Storage, Windows Azure Storage Account, Windows Azure Management Tool, Blobs, Tables, Queues, Files. Worker Roles - Queue Service. Security and Azure Storage - Securing your storage account, Securing access to your data, Securing your data in transit, Encryption at rest, Using Storage Analytics to audit access, Using Cross-Origin Resource Sharing (CORS).

UNIT-3	15 Hours
Virtual Machines - Introduction to Azure Virtual Machine, Virtual machine me	odels, Virtual
machine components, Virtual Machine creation, connecting to a virtual machine, co	nfiguring and
managing virtual machine, scaling Azure virtual machine, Installing SQL serv	er and J2EE
Platform, Connecting to SQL Server on Virtual Machine.	

Azure Virtual Networks – Introduction, Network Security Groups, Cross-premises connection options, Point-to-site network.

**Azure SQL** – Azure SQL Features, Database Server Creation in the Cloud, Azure SQL Relational Engine Features, Azure SQL Access, Existing Database Migration, Applications connecting to SQL Azure.

UNIT-4	

15 Hours

**Service Bus** - Service Bus, Relayed messaging, Brokered Messaging- Queues, Topics. **Azure Active Directory** - Overview of Azure Active Directory, Creating a directory, Users and groups, Multi-Factor Authentication, Application gallery.

Azure Key Vault - Basic concepts, Terminology used in Azure Key Vault, Ways to access Keys and Secrets in a Key Vault, Steps to authenticate an application with the Key Vault, Benefits of using Azure Key Vault.

Scientific Management: Definition, Principles of Scientific Management.

**Forms of Business Organization:** Choice of form of organization, Salient features of Sole Proprietorship, Partnership, Joint Stock Company: Private Limited and Public Limited companies; Merits and demerits.

**Organization:** Definition, Line, line and staff, functional and matrix organization, Introduction to Strategic Management: Definition and scope

UNIT-2		

13 Hours

**Human Resource Management:** Functions of HR management, human resource planning, recruitment, selection, placement, training & development and performance appraisal, Motivation theories, leadership styles.

**Marketing Management:** Concepts of Selling and Marketing, Functions of Marketing, Marketing mix (4 Ps); Advertising and sales promotion; Product life cycle; distribution channels

13 Hours

**Materials Management:** Inventory Control, objectives of inventory control, Inventory costs, Basic EOQ model, Model with Price breaks, ABC analysis, FSN Analysis, VED Analysis.

**Total Quality Management:** Definition of, Importance of quality, Phases of quality management, quality control, Difference between Inspection and Quality control, Components of total quality, Quality Function Deployment

Introduction to Supply Chain Management: Definition, scope of SCM, Drivers of SCM, Advantages, limitations

UNIT-4

UNIT-3

13 Hours

**Financial Management:** Functions of finance, Types of Capital-Fixed and Working Capital, Break Even Analysis.

**Entrepreneurship Development:** Introduction, Entrepreneurial characteristics, Functions of an Entrepreneur; Factors affecting entrepreneurship; Role of communication in entrepreneurship; Entrepreneurial Development-Objectives, Need of Training for enterprises; Finance for the enterprises.

UNIT-I 12 Periods															
<b>DevOps Basics &amp; Version Control</b> : Definition of DevOps, DevOps Stakeholders, DevOps goals, DevOps life cycle. Version Control, Continuous Integration, Continuous Delivery, Continuous Deployment,															

DEPARTMENT OF COMPUTER SCIENCE AND ENGINEERING

Continuous Monitoring.

Git basics, Git features, installing Git, Git essentials, common commands in Git, working with remote repositories using GitHub.

List of Experiments

- 1. Demonstrate Deploying an Application to GitHub.
- 2. Demonstrate working with Git Shell commands.
- 3. Demonstrate working with remote repositories.

	UNIT-II	12 Periods								
<ul> <li>Continuous Integration using Jenkins: Introduction-Understanding Continuous Integration, introduction about Jenkins, Build Cycle, Jenkins Architecture, installation, Jenkin management. Adding a slave node to Jenkins, Building Delivery Pipeline, Pipeline as a Code.</li> <li>List of Experiments <ol> <li>Demonstrate creation of maven application.</li> <li>Demonstrate Building Delivery Pipeline (Continuous Integration) using Jenkins.</li> </ol> </li> </ul>										
	UNIT-III	12 Periods								
Continuous Delivery: Containerization with Docker. List of Experiments 1. Demonstrate Containerization with Docker.										
	UNIT-IV	12 Periods								
Continuous Delivery: Configuration management, and application deployment functionality using Ansible, Containerization using Kubernetes. List of Experiments 1. Demonstrate CI/CD job to build code on ansible and deploy it on container. 2. Demonstrate Containerization with Kubernetes.

1 ~		a .				OF E									
1. Create Azure Student subscription and explore the Azure management portal.															
	2. Design an ASP.NET MVC website to perform CRUD operations on a SQL Server database with search option and validation.														
		<u> </u>													
	gn Clou														
4. Desig															

- 5. Design Cloud Service with WebRole and WorkerRole to demonstrate Windows Azure Queue Storage.
- 6. Design Cloud Service to demonstrate Windows Azure Files Storage.

- 7. Create Azure Virtual Machine and configure with Microsoft SQL Server, and J2EE platform to host web applications.
- 8. Design a Cloud service (or) C# Console Application to access Virtual Machine SQL Server database.
- 9. Design Cloud Service (or) C# Console Application to access Azure SQL.
- 10. Write C# Console Application to implement Service Bus Relayed Messaging.
- 11. Write C# Console Application to implement Service Bus Brokered Messaging using Queues.

12. Write C# Console Application to implement Service Bus Brokered Messaging using Topics.

The Project work shall be carried out by a batch consisting not more than four students for one semester. It should help the students to comprehend and apply different theories and technologies that they have learnt through and are learning. It should lead to a substantial result as a comparative study, a new application of the technologies available or some extension to the works carried out by some researcher and published in referred journals. Each batch must carry out the analysis, design, implementation and testing of the entire project basing on the Software Engineering principles. There shall be a total of four reviews made by the batch regarding:

- 1. 0th Review: The idea/concept which forms the basis for their project shall be presented to the guide, concerned in charge and classmates and shall get the approval for Continuation.
- 2. 1st Review : The analysis and design carried out.
- 3. 2nd Review : The implementation and the testing done.
- 4. 3rd Review: Over all Presentation of the work carried out and the results found out for the valuation under the internal Assessment.

A comprehensive report on the lines of IEEE Format is to be submitted at the end of the semester, which is certified by the concerned guide and the HOD. There shall be an external guide appointed by the Principal/Controller of Examiner to make an assessment and to carry out the Viva-Voce examination.

CO222CO323CO423CO413UNIT-1(13 Hours)Conventional Software Management: The waterfall model, conventional software Management performance.Evolution of Software Economics: Software Economics, pragmatic software cost estimation.Improving Software Economics: Reducing Software product size, improving software processes, improving team effectiveness, improving automation, Achieving required quality, peer inspections.The old way and the new: The principles of conventional software Engineering, principles of modern software management, transitioning to an iterative process.										
CO2       -       -       -       -       2       -       -       2       -       -       -       -       -       -       -       -       -       -       -       -       -       -       -       -       -       -       -       -       -       -       -       -       -       -       -       -       -       -       -       -       -       -       -       -       -       -       -       -       -       -       -       -       -       -       -       -       -       -       -       -       -       -       -       -       -       -       -       -       -       -       -       -       -       -       -       -       -       -       -       -       -       -       -       -       -       -       -       -       -       -       -       -       -       -       -       -       -       -       -       -       -       -       -       -       -       -       -       -       -       -       -       -       -       -       -       -       -       -										

transition phases. Artifacts of the process: The artifact sets, Management artifacts, Engineering artifacts, programmatic artifacts.

Model based	software architectures: A Management perspective and technica	al nerspective							
Work Flows of the process: Software process workflows, Iteration workflows.									
UNIT-3 (13 Hours)									
	Checkpoints of the process: Major mile stones, Minor Milestones, Periodic status assessments.								
Iterative Proce	ss Planning: Work breakdown structures, planning guidelines, cost	and schedule							
estimating, Ite	eration planning process, Pragmatic planning. Project Organ	izations and							
Responsibilitie	Responsibilities: Line-of-Business Organizations, Project Organizations, evolution of								
Organizations.									
Process Automation: Automation Building blocks, The Project Environment.									
UNIT-4 (13 Hours)									
Project Control and Process instrumentation : The seven core Metrics, Management indicators,									
quality indicate	quality indicators, life cycle expectations, pragmatic Software Metrics, Metrics automation.								
Tailoring the Process : Process discriminants.									
Future Software Project Management : Modern Project Profiles, Next generation Software									
economics, modern process transitions.									
Case Study: The command Center Processing and Display system- Replacement (CCPDS-R)

<b>DEPARTMENT</b> (	<b>OF COMPUTER</b>	SCIENCE AND	ENGINEERING

		merical Optimization onor Course (Code: I)							
Lectures	: 3 Hours /week	Continuous Assessment	: 30						
Final Exam	: 3 Hours	Final Exam Marks	: 70						
T mur Exum	. 5110015	T mur Exum murks	. 70						
Pre-Requisite	: None								
Course Objec	tives: Students will be								
>	description of the rea	op operational research models fr il system.	om the verbal						
Understand the mathematical tools that are needed to solve optimization problems.									
4									
<ul> <li>Develop a report that describes the model and the solving technique, analyze the results and propose recommendations in language understandable to the decision- making processes in Management Engineering.</li> </ul>									
Course Outco	omes: Students will be								
CO1 To derive the best and most economical solution to the given LPP within all of it's limitations in the fields of Engineering, Agricultural and manufacturing etc.									
CO2 To apply these techniques constructively to make effective decisions in various competitive game fields.									
CO3 To impart the knowledge of Operations Research in the concepts of Integer Programming and Dynamic Programming Problems.									
CO4 To understand various mathematical models of Queuing systems used in Operations Research.									
	UNI	T-1	12 Hours						
LINEAR PRO	GRAMMING PROBL	EM:							
Programming Introduction,	Problem; Canonical a Fundamental Propertie	Method; Some exception cases; G nd Standard Forms of L.P.P; The Sir es of Solutions(without Proofs); the ques(Big-M method), Problem of Deger	nplex Method: Computations						
[Sections:2.1;2	2.3;2.4;2.5;2.6;3.1;3.2;3	3.3;3.5;3.6]							
UNIT-2 12 Hours									
Minimax Prin Rectangular G	ciple; Games Withou	luction; Two-person Zero–Sum Games; it Saddle Points-Mixed Strategies; So od; Dominance Property; Algebraic M	olution of 2x2						
[Sections:9.1;9	9.2;9.3;9.4;9.5;9.6;9.7;9	0.8;9.12]							
	UN	IT-3	12 Hours						
INTEGER I Programming	PROGRMMING PR	OBBLEM: Introduction, Gomory's	s All-Integer						
Problem Meth	od; Branch and Bound	Method.							

DYNAMIC PROGRAMMING: Introduction, the Recursive Equation Approach, Characteristics of Dynamic Programming, Dynamic Programming Algorithm, Solution of Discrete Dynamic Programming Problem.

[Sections:11.1;11.2;11.4;12.1;12.2;12.3;12.4;12.5]

12 Hours

QUEUING THEORY: Introduction, Queuing System, Characteristic of Queuing System, Symbols and Notations, Poisson Process and Exponential Distribution, Classification of Queues, Definition of Transient and Steady States, Poisson Queues; The M/M/I Queuing System: Model-I (M/M/I): ( $\infty$ /FIFO), Model-II (M/M/I): ( $\infty$ /SIFO), Model-III (M/M/I): ( $\infty$ /SIFO), Model-IV(Birth-Death Process).

UNIT-4

[Sections:17.1;17.2;17.3;17.4;17.5;17.6;17.7;17.8;17.8.1]

Developing Use-cases, Building the Analysis Model, Negotiating Requirements, Validating

Requirements.

**BUILDING THE ANALYSIS MODEL**: Requirements Analysis, Analysis Modeling Approaches, Data Modeling Concepts, Flow-Oriented Modeling, Class Based Modeling Creating a Behavioral Model.

UNIT-3 1	5 Periods
----------	-----------

**DESIGN ENGINEERING**: Design within the Context of Software Engineering, Design Process and Design Quality, Design Concepts The Design Model, Pattern Based Software Design.

**CREATING AN ARCHITECTURAL DESIGN**: Software Architecture, Data Design, Architectural Styles and Patterns, Architectural Design, Assessing Alternative Architectural Designs.

**MODELING COMPONENT-LEVEL DESIGN**: What Is a Component?, Designing Class-Based Components, Conducting Component-Level Design, Designing Conventional Components.

**PERFORMING USER INTERFACE DESIGN**: The Golden Rules, User Interface Analysis and Design, Interface Analysis, Interface Design Steps, Design Evaluation.

UNIT-4	15 Periods

**SOFTWARE PROCESS AND PROJECT METRICS**: Introduction: Metrics Process and Project Domains, Software Measurement, Metrics for Software Quality, Integrating Metrics with Process.

**SOFTWARE QUALITY ASSURANCE**: Quality Concepts, Quality Movement, SQA, Software Reviews, Formal Technical Reviews, Formal Approaches to SQA, Software Reliability, ISO 9000 Quality Standards, SQA Plan.

**SOFTWARE TESTING STRATEGIES**: Strategic Approach, Strategic Issues, Test strategies for Conventional Software, Test strategies for Object Oriented Software, Validation Testing, System Testing, The Art of Debugging. White box testing. Black box testing.

Network Layer: Network Layer Design Issues: Store-and-Forward Packet Switching,							tching,									

Network Layer: Network Layer Design Issues: Store-and-Forward Packet Switching, Services Provided to the Transport Layer, Implementation of Connectionless Service,

Implementation of Connection-Oriented Service, Comparison of Virtual-Circuit & Datagram Subnets.

**Routing Algorithms:** The Optimality Principle, Shortest Path Routing, Flooding, Distance Vector Routing, Link State Routing, Hierarchical Routing.

**Congestion Control Algorithms:** General Principles of Congestion Control, Congestion Prevention Policies, Congestion Control in Virtual-Circuit Subnets, Congestion Control in Datagram Subnets, Load Shedding, Jitter Control.

UNIT-316 HoursQuality of Service: Requirements, Techniques for Achieving Good Quality of Service The<br/>Network Layer in the Internet: The IP Protocol, IP Addresses, Internet Control Protocols. The<br/>Transport Layer, The Transport Service: Services Provided to the Upper Layers, Transport<br/>Service Primitives, Berkeley sockets

**Elements of Transport Protocols:** Addressing, Connection Establishment, Connection Release, Flow Control and Buffering, Multiplexing, Crash Recovery.

UNIT-4	
--------	--

14 Hours

**The Internet Transport Protocol (UDP):** Introduction to UDP, Remote Procedure Call, The Real-Time Transport Protocol.

**The Internet Transport Protocols (TCP):** Introduction to TCP, The TCP Service Model, The TCP Protocol, The TCP Segment Header, TCP Connection Establishment, TCP Connection Release, Modeling TCP Connection Management, TCP Transmission Policy, TCP Congestion Control, TCP Timer Management.

**Application Layer:** The Domain Name System (DNS): The DNS Name Space, Resource Records, Name Servers.
