Pre-Req	uisite:	Nor	le													
Course (	Object	ives	: Stud	dents	will l	earn	how	to								
$\triangleright$	Solve a system of linear homogeneous and non-homogeneous equations, finding the inverse of a given square matrix and also its Eigen values and Eigen vectors															
	Identify the type of a given differential equation and select and apply the appropriate analyticaltechnique for finding the solution of first order ordinary differential equations.															
$\triangleright$	Crea	te ar	nd an									orde	r diffe	erential	equation	ons t
$\triangleright$	solve application problems that arise in engineering. Solve a linear differential equation with constant coefficients with the given initial conditions using Laplace Transforms.															
Course (																
CO-1	Find the eigen values and eigen vectors of a given matrix and its inverse.															
CO-2	Apply the appropriate analytical technique to find the solution of a first order ordinar differential equation.															
CO-3	Solve higher order linear differential equations with constant coefficients arise in engineering applications.															
CO-4							solve	diffe	rentia	l equ	ations	arisi	ng in o	engine	ering.
