| <b>GRAPH THEORY</b>  |  |                |             |                       |          |          |          |          |          |           |           |           |              |          |          |
|--|--|----------------|-------------|-----------------------|----------|----------|----------|----------|----------|-----------|-----------|-----------|--------------|----------|----------|
| <b>IV B.Tech VII Semester 18MA006</b>  |  |                |             |                       |          |          |          |          |          |           |           |           |              |          |          |
| Lectures   | :  | 4 Periods/Week | Credits - 3 | Continuous Assessment | :        | 50       |          |          |          |           |           |           |              |          |          |
| Final Exam   | :  | 3 hours        |             | Final Exam Marks      | :        | 50       |          |          |          |           |           |           |              |          |          |
| <b>Pre-Requisite:</b> None   |  |                |             |                       |          |          |          |          |          |           |           |           |              |          |          |
| <b>Course Objectives:</b> Students will learn how to   |  |                |             |                       |          |          |          |          |          |           |           |           |              |          |          |
| ➤  | To apply the fundamental concepts of graph theory for determining Isomorphism of graphs and also solving the real life problems like Konigsberg Bridge Problem and travelling Salesman Problem.  |                |             |                       |          |          |          |          |          |           |           |           |              |          |          |
| ➤  | To analyze the concepts of Trees and Fundamental Circuits with their properties for finding Minimal Spanning Trees in weighted Graphs by using Kruskals and Prim's Algorithms.   |                |             |                       |          |          |          |          |          |           |           |           |              |          |          |
| ➤  | To acquire the ample knowledge of coloring of a graph and Planar graphs with their different representations for detecting the planarity of graphs by using Kurotowski's Theorem and also Computing the Chromatics number for a given graph including four color problem |                |             |                       |          |          |          |          |          |           |           |           |              |          |          |
| ➤  | To get an idea of representation of graphs in matrices such as incidence matrix , Adjacency matrix etc and establishment of the correspondence between graph-theoretic properties and matrix properties.   |                |             |                       |          |          |          |          |          |           |           |           |              |          |          |
| <b>Course Outcomes:</b> After studying this course, the students will be able to                 |  |                |             |                       |          |          |          |          |          |           |           |           |              |          |          |
| CO1  | Discuss the basic concepts of graph theory and able to determine whether a graph is Eulerian and Hamiltonian.  |                |             |                       |          |          |          |          |          |           |           |           |              |          |          |
| CO2  | Apply Kruskal's and Prim's algorithms in order to determine the minimum spanning tree in a connected weighted graph.   |                |             |                       |          |          |          |          |          |           |           |           |              |          |          |
| CO3  | Determine the planarity of a graph using Kuratowski's algorithm and find the chromatic number of a given graph.  |                |             |                       |          |          |          |          |          |           |           |           |              |          |          |
| CO4  | Analyse the properties of graphs through matrix representation and utilize these ideas in the application of switching network.  |                |             |                       |          |          |          |          |          |           |           |           |              |          |          |
| <b>Mapping of Course Learning Outcomes with Program Outcomes &amp; Program Specific Outcomes</b> |  |                |             |                       |          |          |          |          |          |           |           |           |              |          |          |
|  | <b>PO's</b>  |                |             |                       |          |          |          |          |          |           |           |           | <b>PSO's</b> |          |          |
| <b>CO</b>  | <b>1</b>   | <b>2</b>       | <b>3</b>    | <b>4</b>              | <b>5</b> | <b>6</b> | <b>7</b> | <b>8</b> | <b>9</b> | <b>10</b> | <b>11</b> | <b>12</b> | <b>1</b>     | <b>2</b> | <b>3</b> |
| <b>CO1</b>   | 3  | 3              | 3           | -                     | -        | -        | -        | -        | -        | -         | -         | 2         | -            | -        | -        |
| <b>CO2</b>   | 3  | 3              | 3           | -                     | -        | -        | -        | -        | -        | -         | -         | 2         | -            | -        | -        |

(Autonomous)

|  |  |            |
|--|--|------------|
| <b>UNIT-1</b>  |  | (12 Hours) |
| <b>PATHS AND CIRCUITS:</b><br><b>Introduction: Graphs:</b> Graph, Finite and infinite graphs, Incidence and degree, isolated vertex, pendent vertex and null graph; Isomorphism; Subgraphs; walks, paths and circuits; Connected graphs, Disconnected graphs and Components; Euler graphs(Konigsberg Bridge Problem); Hamiltonian Paths and circuits; Travelling salesman problem.<br>[Sections: 1.1; 1.3; 1.4; 1.5; 2.1; 2.2; 2.4; 2.5; 2.6; 2.9; 2.10] |  |            |
| <b>UNIT-2</b>  |  | (12 Hours) |
| <b>TREES AND FUNDAMENTAL CIRCUITS:</b> Trees; Some Properties of Trees; Distance and centers in a Tree; Rooted and Binary Trees; Spanning Trees; Fundamental circuits; Spanning Trees in a Weighted graphs( Kruskal's Algorithm and Prim's Algorithm).<br>[Sections:3.1; 3.2; 3.4; 3.5; 3.7; 3.8; 3.10]  |  |            |
| <b>UNIT-3</b>  |  | (12 Hours) |
| <b>PLANAR AND DUAL GRAPHS:</b> Planar graphs; Kuratowski's two graphs; Different Representations of a Planar graph: Euler's formula, Theorem-5.6 and Corollary; Detection of planarity(Kuratowski's theorem); Geometric Dual; Coloring of a Graph, Chromatic number, The four Color problem.<br>[Sections: 5.2; 5.3; 5.4; 5.5; 5.6; 8.1, 8.6]  |  |            |
| <b>UNIT-4</b>  |  | (12 Hours) |
| <b>MATRIX REPRESENTATION OF GRAPHS:</b> Incidence Matrix; Submatrices of $A(G)$ ; Circuit Matrix; Fundamental Circuit Matrix and Rank of $B$ ; Application to a switching network; Cut-set Matrix; Relationship among $A_f$ , $B_f$ and $C_f$ ; Path Matrix; Adjacency Matrix.<br>[Sections:7.1; 7.2; 7.3; 7.4; 7.5; 7.6; 7.7; 7.8; 7.9]   |  |            |
| <b>Text Books :</b>  | NarsinghDeo, 'Graph Theory with Applications to Engineering and Computer Science' Prentice-Hall of India Private Limited, New Delhi. |            |
