Department of Computer Science & Engineering

INSTITUTE VISION

To build centers of excellence, impart high quality education and instill high standards of ethics and professionalism through strategic efforts of our dedicated staff, which allows the college to effectively adapt to the ever-changing aspects of education.

To empower the faculty and students with the knowledge, skills and innovative thinking to facilitate discovery in numerous existing and yet to be discovered fields of engineering, technology and interdisciplinary endeavours.

INSTITUTE MISSION

Our Mission is to impart the quality education at par with global standards to the students from all over India and in particular those from the local and rural areas.

We continuously try to maintain high standards so as to make them technologically competent and ethically strong individuals who shall be able to improve the quality of life and economy of our country.

PROGRAM OUTCOMES

PO1-Engineering knowledge: Apply the knowledge of mathematics, science, engineering fundamentals, and an engineering specialization to the solution of complex engineering problems.

PO2-Problem analysis: Identify, formulate, review research literature, and analyze complex engineering problems reaching substantiated conclusions using first principles of mathematics, natural sciences, and engineering sciences.

PO3-Design/development of solutions: Design solutions for complex engineering problems and design system components or processes that meet the specified needs with appropriate consideration for the public health and safety, and the cultural, societal, and environmental considerations.

PO4-Conduct investigations of complex problems: Use research-based knowledge and research methods including design of experiments, analysis and interpretation of data, and synthesis of the information to provide valid conclusions.

PO5-Modern tool usage: Create, select, and apply appropriate techniques, resources, and modern engineering and IT tools including prediction and modeling to complex engineering activities with an understanding of the limitations.

PO6-The engineer and society: Apply reasoning informed by the contextual knowledge to assess societal, health, safety, legal and cultural issues and the consequent responsibilities relevant to the professional engineering practice.

PO7-Ethics: Apply ethical principles and commit to professional ethics and responsibilities and norms of the engineering practice.

PO8-Individual and team work: Function effectively as an individual, and as a member or leader in diverse teams, and in multidisciplinary settings.

PO9-Communication: Communicate effectively on complex engineering activities with the engineering community and with society at large, such as, being able to comprehend and write effective reports and design documentation, make effective presentations, and give and receive clear instructions.

PO10-Project management and finance: Demonstrate knowledge and understanding of the engineering and management principles and apply these to one's own work, as a member and leader in a team, to manage projects and in multidisciplinary environments.

PO11-Life-long learning: Recognize the need for, and have the preparation and ability to engage in independent and life-long learning in the broadest context of technological change.

Department of Computer Science & Engineering

Academic Rules & Regulations

(R24 Regulations)

Regulations for Four Year Bachelor of Technology (B.Tech)

Degree Program for the Students Admitted from the Academic Year 2024-25

1. Admissions

The sanctioned intake in a particular B.Tech program comprises of Category-A (presently 70%) and Category-B (30%) seats which is supplemented with supernumerary (10%) EWS seats. Admissions for the Category-A seats and the supernumerary seats shall be made by the Andhra Pradesh (A.P.) State Government based on the merit rank obtained by the student in the common entrance examination conducted. Admissions for the remaining Category-B seats shall be made by the college in accordance with the guidelines issued by the A.P. State Government.

2. Medium of Instruction and Examination:

The medium of instruction of the entire B.Tech undergraduate program in Engineering and Technology and the examinations will be in English only.

3. Minimum Instruction Days:

A semester comprises of 90 working days and the year is divided into two semesters.

4. Award of B.Tech. Degree:

A student will be declared eligible for the award of the B.Tech degree if he / she fulfills the following academic regulations:

- a. The student pursues a program of study in B.Tech for four academic years and in not more than eight academic years. A lateral entry student pursues a program of study for three academic years and not more than six academic years. However, for the students availing Gap year facility, this period shall be extended by two years at the most and these two years would not be counted in the maximum time permitted for graduation.
- b. The student registers for 160 credits and secures all 160 credits. However, a lateral entry student registers for 121 credits and secures all the 121 credits from III semester to VIII semester of regular B. Tech program.

c. Award of B. Tech degree with Minor:

The student secures an additional 16 credits from minor stream chosen and fulfills all the requisites of a B.Tech program i.e. secures 160 (Regular program) / 121 (Lateral Entry program) credits.

Minor is to be completed simultaneously with B.Tech program. Registering for a Minor degree is optional.

d. Award of B.Tech degree with Honors:

The student secures an additional 16 credits fulfilling all the requisites of B.Tech program i.e. secures 160 (Regular program) / 121 (Lateral Entry program) credits. Registering for Honors is optional and is to be completed simultaneously with B.Tech program.

Students can register either for Honors stream or Minor stream.

4.1 Guidelines for offering a Minor in a discipline:

Minor in a discipline concept is introduced in the curriculum for all conventional B. Tech programs in which it offers a Major Program (B.Tech degree). The main objective of Minor in a discipline is to provide additional learning opportunities for academically motivated students, and it is an optional added feature of the B. Tech. program.

- a. Students who are desirous of pursuing their special interest areas other than the chosen discipline of Engineering may opt for additional courses in Minor specialization groups offered by a department other than their parent department.
- b. The BOS concerned shall identify as many tracks as possible in the areas of emerging technologies and industrial relevance / demand. For example, the Minor tracks can be the fundamental courses in CSE, ECE, EEE, CE, ME etc or industry tracks such as Artificial Intelligence (AI), Machine Learning (ML), Data Science (DS), Robotics, Electric vehicles, VLSI etc.
- c. The list of disciplines / branches eligible to opt for a particular industry relevant minor specialization shall be clearly mentioned by the respective BOS.
- d. There shall be no limit on the number of programs offered under Minor. The Institution can offer Minor programs in emerging technologies based on expertise in the respective departments or can explore the possibility of collaborating with the relevant industries/agencies in offering the program.
- e. The concerned BOS shall decide on the minimum enrolments for offering Minor program by the department. If a minimum enrolments criterion is not met, then the students may be permitted to register for the equivalent MOOC courses as approved by the concerned Head of the department in consultation with BOS.
- f. A student shall be permitted to register for Minor program at the beginning of 4th semester provided that the student must have acquired a minimum of **7.0 CGPA** up to the end of 3rd semester without any backlogs. A CGPA of 7.0 must be maintained in the subsequent semesters without any backlog to keep the Minor registration active.
- g. A student must earn an additional 16 credits in the specified area to be eligible for the award of B. Tech degree with Minor. This is in addition to the credits essential for obtaining the Undergraduate degree in Major discipline (i.e. 160 credits for regular students and 121 credits for Lateral Entry students). The concerned BOS shall finalize the modalities to earn the above credits.
- h. For securing the above additional 16 credits, the students must register and complete three courses of 4 credits each offered by the department concerned. These 3 courses must contain a laboratory component also (i.e. Embedded course having three lecture hours and two practical hours). The balance of 4 credits may be secured through two MOOCs courses of 2 credits each or an embedded course

offered by the department.

- i. Courses that are used to fulfil the student's primary Major may not be double counted towards the Minor. Courses with content substantially equivalent to courses in the student's primary Major may not be counted towards the Minor.
- j. The student registered for Minor shall pass in all subjects that constitute the requirement for the Minor program. No class / division (i.e., second class, first class, distinction, etc.) shall be awarded for Minor degree programme
- k. If a student drops (or terminated) from the Minor program, they cannot convert the earned credits into free or core electives; they will remain extra.
- l. In case a student fails to meet the CGPA requirement for B.Tech degree as per clause 15.f or drops (or terminated) from the Minor program, he/she will be dropped from the list of students eligible for Minors degree and they will receive B.Tech degree only. However, such students will receive a separate grade sheet mentioning the additional courses completed by them.
- m. The Minor will be mentioned in the Major degree certificate only. No additional degree certificate will be given for Minor degree.
- n. Transfer of credits from Minor to regular B. Tech degree and vice-versa shall not be permitted
- o. Minor must be completed simultaneously with a Major degree program. A student cannot earn the Minor degree after he / she has already earned bachelor's degree.
- p. The documents for registration of Minor courses are available from the departments and college website.

4.2 Guidelines for offering a Honors in a Discipline:

The objective of introducing B.Tech (Honors) is to facilitate the students to choose additional specialized courses of their choice and build their competence in a specialized area in the UG level. The programme is a best choice for academically excellent students having good academic record and interest towards higher studies and research.

Honors is introduced in the curriculum of all B. Tech. programs offering a Major degree and is applicable to all B. Tech (Regular and Lateral Entry) students admitted in Engineering & Technology. Students are eligible to opt for Honors program offered by the same Department / Discipline.

- a. Students who are desirous of pursuing special interest / advanced areas of their discipline of Engineering may opt for additional courses as part of Honors programs offered by the parent department.
- b. The BOS concerned shall identify as many tracks as possible in the areas of emerging technologies and industrial relevance / demand.
- c. A student shall be permitted to register for Honors program at the beginning of 4th semester provided that the student must have acquired a minimum of **7.5 CGPA** up to the end of 3rd semester without any backlogs. A CGPA of 7.5 must be maintained in the subsequent semesters without any backlog to keep the Honors registration active.
- d. A student must earn additional 16 credits for award of B.Tech. (Honors) degree from the same branch / department / discipline registered for Major degree. This is in addition to the credits essential for obtaining the Undergraduate degree in Major discipline (i.e., 160 credits for regular students and 121 credits for Lateral Entry

- students). The concerned BOS shall finalize the modalities to earn the above credits.
- e. For securing the above additional 16 credits, the students must register and complete three courses of 4 credits each offered by the department concerned. These 3 courses must contain a laboratory component also (i.e. Embedded course having three lecture hours and two practical hours). The balance of 4 credits may be secured through two MOOCs courses of 2 credits each or an embedded course offered by the department.
 - f. Courses that are used to fulfil the student's primary Major may not be counted towards the Honors.
 - g. The student registered for Honors shall pass in all subjects that constitute the requirement for the Honors program. No class / division (i.e., second class, first class and distinction, etc.) shall be awarded for Honors program.
 - h. If a student drops or is terminated from the Honors program, the additional credits earned so far cannot be converted into open or core electives; they will remain extra.
 - i. In case a student fails to meet the CGPA requirement for B.Tech degree as per clause 16.c or drops (or terminated) from the Honors program, he/she will be dropped from the list of students eligible for degree with Honors and they will receive B.Tech degree only. However, such students will receive a separate grade sheet mentioning the additional courses completed by them
 - j. The Honors will be mentioned in the Major degree certificate only as Bachelor of Technology (Honors). No additional degree certificate will be given for Honors.
 - k. Transfer of credits from Honors to regular B. Tech degree and vice-versa shall not be permitted.
 - l. Honors is to be completed simultaneously with a Major degree. A student cannot earn the Honors after he / she has already earned bachelor's degree
 - m. The documents for registration of Honors are available from the departments and college website.

4.3 Course Evaluation Process:

The performance of the students in each semester shall be assessed course wise. All assessments will be done on an absolute mark basis. However, for the purpose of reporting the performance of a candidate, letter grades and grade points will be awarded.

The performance of a student in each course is assessed with term examinations during the semester called Continuous Internal Evaluation (CIE) and a Semester End Examination (SEE) conducted at the end of the semester. For each course, there shall be a comprehensive SEE of three hours duration at the end of each semester.

4.3.1 Weightage for Course Evaluation:

The distribution of marks between CIE and SEE will be as follows:

Nature of the Course	CIE	SEE
Embedded Courses (Theory + Practical)	50	50

4.3.2 CIE in Embedded Course:

In each embedded course 25 marks is allotted for theory part and 25 marks for practical part. Theory part is evaluated in terms of two term examinations and practical part is evaluated in terms of day-to-day work and one term examination.

- a. **Theory Part – 25 marks:** For theory part the term examination is conducted in the regular mode according to a schedule given for Honors / Minor courses which will be common for a particular semester of study. The weightage for Term Examinations and the calculation of marks for CIE in theory part is given in the following Table.

Term Exams in Theory Part (Max. 25 marks)
15 marks from the best performed term exam + 10 marks from the other term exam

- b. **Practical part – 25 marks:** The practical part comprises of 10 marks for day-to-day laboratory work, 5 marks for record submission and 10 marks for a practical examination at the end of the practical course work. In any semester, a minimum of 90% of prescribed number of experiments / exercises specified in the syllabi for laboratory course shall be completed by the students. They shall complete these experiments / exercises in all respects and get the record certified by the internal lab teacher concerned and the Head of the Department.

4.3.3 SEE in Embedded Course:

For each course, SEE shall be conducted for theory part only. A comprehensive SEE will be conducted of three hours duration at the end of each semester course for 50 marks.

4.3.4 MOOCs Course:

If a student opts for two MOOC's, the courses must be of a minimum of 12 weeks in duration and shall contain proctored examinations. As per MOOCs guidelines the Internal Department Committee comprising Head of Department and two senior faculty members shall evaluate the certificate / grades / marks awarded for a course by external agencies and convert the same to equivalent marks / grades.

4.4 Pass Criteria in Embedded Course:

a. In CIE

A minimum of 25 (50%) marks are to be secured exclusively in the CIE with a minimum of 65% attendance in that course to be declared as qualified (Q) in that course and be eligible to appear for the SEE of that course. If a student fails to obtain 25 marks in CIE or a minimum of 65% attendance in that course, then the student will be regarded as not qualified (NQ) and such a student will be discontinued from the Honors / Minor degree program.

b. In SEE

A minimum of 20 (40%) marks of theory part is to be secured exclusively in the SEE of each course. A student eligible to appear for the SEE in a course but is absent or failed in the examination will be discontinued from the Honors / Minor degree program.

List of Courses for Honors in.....

1. The student can opt for any three courses from the following table.
2. The fourth course is optional; the student may either take two MOOC courses of 2 credits each or choose one course from the following table.
3. Concerned BOS can add or delete the subjects as per their decision.
4. Prerequisites if any, to be defined by the BOS for each course.
5. The list of MOOC courses will be specified every year at the beginning of the odd and even semesters by the Department MOOC Committee.

List of Honors Courses:

S.No	Code	Course Title	L	T	P	C
1	A	Advanced Data Structures & Algorithms	3	0	2	4
2	B	Advanced Database Management Systems	3	0	2	4
3	C	Realtime Operating Systems	3	0	2	4
4	D	Quantum Computing	3	0	2	4

Note: The course will be specified in the “Scheme of Instruction & Examination” pertaining to that semester. The course code format is 24XXHYZ

XX – Department code

H – Honors

Y – Semester

Z – Code in the above table

5 Courses of study:

At present the following B.Tech programs of study are offered.

S. No.	Title of the UG Program	Abbreviation
1.	Civil Engineering	CE
2.	Computer Science & Engineering	CS
3.	Computer Science & Engineering (Cyber Security)	CB
4.	Computer Science & Engineering (Data Science)	DS
5.	Computer Science & Engineering (Artificial Intelligence & Machine Learning)	CM
6.	Electronics & Communication Engineering	EC
7.	Electrical & Electronics Engineering	EE
8.	Information Technology	IT
9.	Mechanical Engineering	ME

6 Credits:

- 6.1 **Credit:** A unit by which the course work is measured. It determines the number of hours (60 minutes) of instruction required per week. One credit is equivalent to one hour of teaching (Lecture/Tutorial) or two hours of practical work/field work per week.
- 6.2 **Academic Year:** Two consecutive (one odd & one even) semesters constitute one academic year.
- 6.3 **Choice Based Credit System (CBCS):** The CBCS provides a choice for students to select courses (Professional, Job Oriented & Open Electives) from the prescribed set of courses.
- 6.4 Each course in a semester is assigned certain number of credits based on the following

1 Hr. Lecture (L) per week	1 Credit
1 Hr. Tutorial (T) per week	1 Credit

Bapatla Engineering College: Bapatla -522102 (Autonomous)

Approved by AICTE :: Affiliated to ACHARYA NAGARJUNA UNIVERSITY

Department of Computer Science & Engineering

1 Hr. Practical (P) per week	0.5 Credit
Internship of 4 – 6 weeks	2 Credits
Project Work of 16 weeks	12 Credits

7 Course Structure:

Every course of the B.Tech program will be placed in one of the 7 categories with suggested credits as listed below.

S. No.	Category	AICTE Recommended Credits (%)	Breakup of Credits (Total 160)
1.	Humanities and Social Sciences including Management (HM)	5 – 8 %	8 – 13
2.	Basic Science Courses (BS)	12 – 16 %	19 – 26
3.	Engineering Science Courses (ES)	10 – 18 %	16 – 29
4.	Professional Core Courses (PC)	30 – 36 %	48 – 58
5.	Electives – Professional Electives (PE); Job Oriented Electives (JOE); Open Electives (OE); Skill Enhancement Courses (SEC)	19 – 25 %	31 - 40
6.	Internships & Project Work (PR)	8 – 11 %	16
7.	Mandatory Courses (MC)	-	Non-credit

8 Course Evaluation Process:

The performance of the students in each semester shall be assessed course wise. All assessments will be done on an absolute mark basis. However, for the purpose of reporting the performance of a candidate, letter grades and grade points will be awarded.

The performance of a student in each course is assessed with alternate assessment methods, term examinations on a continuous basis during the semester called Continuous Internal Evaluation (CIE) and a Semester End Examination (SEE) conducted at the end of the semester. For each course, there shall be a comprehensive SEE of three hours duration at the end of each semester, except Mandatory courses.

The performance of a student in Internships, NSS/NCC/Scouts & Guides/Community Service and Health & Wellness/Yoga/Sports will be evaluated after completion of the course at the end of that semester.

8.1 Weightage for Course Evaluation:

The distribution of marks between CIE and SEE to be conducted at the end of the semester will be as follows:

Nature of the Course	CIE	SEE
Theory Courses	40	60
Practical Courses	40	60
Mandatory Courses	40	-
NSS/NCC/Scouts & Guides/Community Service and Health & Wellness/Yoga/Sports	-	100
Summer Internship	-	100
Project Work	40	60

8.2 CIE in Theory/Mandatory Courses:

In each Semester there shall be two Term Examinations and *Alternate Assessment Tools (AAT)* like Home Assignment, Class Test, Problem Solving, Group Discussion, Quiz, Seminar and Field Study in every theory course. The AAT with detailed modality of evaluation for each course shall be finalized by the teacher concerned before beginning of the course. It will be reviewed and approved by the Department Committee.

The Term Examination is conducted in the regular mode according to a schedule which will be common for a particular semester of study. The maximum weightage for Term Examinations, AATs and the calculation of marks for CIE in a theory course is given in the following Table.

Term Exams (Max. 20 marks*)	AAT (Max. 15 marks**)	Attendance (Max. 5 marks)
75% of marks obtained in the best performed term exam + 25% of marks obtained in the other term exam	Continuous assessment by teacher as per the predetermined course delivery & assessment plan. (Minimum two & maximum four assessments). AAT marks shall be considered based on average of all tests conducted.	Attendance secured & marks awarded will be as under: ≥75% and <80% - 2 marks ≥80% and <85% - 3 marks ≥85% and <90% - 4 marks ≥90% - 5 marks

*Term Examination will be conducted for 30 marks and reduced to 20 marks.

**Each AAT will be conducted for 10 marks and the average performance shall be scaled up to 15 marks.

8.3 CIE in Laboratory Courses:

The CIE for 40 marks of a laboratory course comprises of 15 marks for day-to-day laboratory work, 5 marks for record submission, 5 marks for attendance and 15 marks for a laboratory examination at the end of the laboratory course work. In any semester, a minimum of 90% of prescribed number of experiments / exercises specified in the syllabi for laboratory course shall be completed by the students. They shall complete these experiments / exercises in all respects and get the record certified by the internal lab teacher concerned and the Head of the Department.

8.4 CIE in Project Work:

The CIE is for 40 marks which consist of 20 marks for reviews at the end of each month as per the process document in the form of seminars / presentations, 5 marks for attendance and 15 marks for the evaluation of project report submitted at the end of the semester.

8.5 Pass criteria for CIE:

A minimum of 20 (50%) marks are to be secured exclusively in the CIE with a minimum of 65% attendance in that course to be declared as qualified (Q) in that course and be eligible to appear for the SEE of that course. If a student fails to obtain 20 marks in CIE or a minimum of 65% attendance in that course, then the student will be regarded as not qualified (NQ) and such a student can register for the course repetition as per the guidelines mentioned in clause 13 to qualify in that course. After securing 20 marks in course repetition, the student can appear for the SEE of that course as a supplementary candidate.

8.6 SEE in Theory Course, Laboratory Course and Project Work:

- a. For each theory course, there shall be a comprehensive SEE of three hours duration at the end of each Semester for 60 marks.
- b. For each laboratory course, the SEE shall be conducted by one internal and one external examiner appointed by the Principal and the duration of the exam shall be for three hours. The SEE is for 60 marks which include 15 marks for write up, 35 marks for lab experiment / exercise and 10 marks for Viva-voce.
- c. Project Work shall be evaluated in the form of a Viva-Voce and demonstration of the thesis work for 60 marks. Viva-voce Examination in project work shall be conducted by one internal examiner appointed by the HOD and one external examiner to be appointed by the Principal.

8.7 Evaluation of Internships:

Summer Internship at the end of IV & VI semesters carried out in industry / organization are to be evaluated in V & VII semesters respectively after the submission of certificate provided by the organization and a concise report submitted by the student to the department committee. The internship will be evaluated by the department committee for a total of 100 marks with 50 marks for the report and 50 marks based on seminars / presentation given to the department committee by the student.

8.8 Evaluation of NSS/NCC/Scouts & Guides/Community Service and Health & Wellness/Yoga/Sports:

The above courses will be evaluated by the department committee for a total of 100 marks with 50 marks for the activities pursued by the student during that semester and 50 marks based on seminars / presentation given to the department committee by the student.

8.9 Pass Criteria for SEE:

a. Theory/Laboratory Courses and Project Work

A minimum of 21 (35%) marks are to be secured exclusively in the SEE of the above courses for the award of the grade and securing the credits for that course.

A student eligible to appear for the SEE in a course but is absent or has failed the examination may appear for SEE of that course in the next supplementary examination when offered.

b. Internship, NSS/ NCC/ Scouts & Guides/ Community Service and Health & Wellness/ Yoga/ Sports

A minimum of 40 (40%) marks are to be secured exclusively in the evaluation of the above courses for the award of the grade and securing the credits for that course.

A student eligible to appear for the evaluation in the above courses but is absent or has failed in the examination may appear for evaluation of that course in the next supplementary examination when offered.

9 Choice Based Courses:

Students can select a course from a prescribed set of courses offered by the department in the following categories.

- a. **Professional Elective Courses:** There shall be five Professional Elective Courses from V Semester to VII. For each elective course there shall be a choice such that the student can choose a course from the list of courses offered by the department for that elective.
- b. **Job Oriented Elective Courses:** There shall be three Job Oriented Elective Courses in all programs from V to VII semester. For each elective course there shall be a choice such that the student can choose a course from the list of courses offered by the department for that elective.
- c. **Open Elective Courses:** One Open Elective Course in VII semester will be offered by various departments. A student can choose and register for an open elective course which is offered by other departments only and he / she has not studied the same course in any form during the Program.
- d. **Massive Open Online Courses (MOOCs):** A Student must pursue and complete one course compulsorily through MOOCs from approved organizations for awarding the degree. A student can pursue MOOCs courses from Professional Elective / Job Oriented Elective / Open Elective Courses only. The student must

inform and take prior permission / approval from the Internal Department Committee. The courses must be of a minimum of 12 weeks in duration and shall contain proctored examinations. The student must acquire a certificate for the concerned course from the agency to earn the credits for that course. For further details and guidelines, the students can visit the college website.

The Internal Department Committee comprising Head of Department and two senior faculty members shall evaluate the certificate / grades / marks awarded for a course by external agencies and convert the same to equivalent marks / grades.

10 Induction Program:

There shall be a mandatory induction program for three weeks before the commencement of the first semester with no credits.

11 There shall be credit programs like NSS/NCC/Scouts & Guides/Community Service and Health & Wellness/Yoga/Sports. Also Design Thinking & Innovation and Tinkering lab are made compulsory credit courses for all branches.

12 Make-up Test:

- a. A student can appear for a Make-up Test for a maximum of two theory courses of a semester to improve marks in the Continuous Internal Evaluation (CIE).
- b. A student is eligible for the Make-up test which is conducted after the second Mid Term examination and before SEE examination if the student satisfies the following conditions.
 - i) Unable to secure 50% internal marks (CIE) and has more than or equal to 65% attendance in a particular theory course (After finalizing the internal marks).
 - ii) Attendance in Remedial classes is more than or equal to 65% (if Remedial classes are conducted) or secured greater than 50% marks in the I Mid Term Examination and AAT-1 together.
 - iii) Attended 50% of CIE tests (at least one AAT & one Mid Term Examinations).

The make-up test will be conducted for 40 marks (8 questions of 1 mark each, 2 questions of 16 marks each) in Mid Examination format covering the entire syllabus and the marks obtained in this test are final. However, the maximum marks awarded will be 20 only.

The students must apply to the principal through the respective HOD by paying prescribed fees.

The documents for registration of the Make-up test are available from the departments and college website.

13 Course Repetition:

The students not qualified to write SEE in a course may register for the repeater courses through Course Repetition. The students must apply to the principal through the respective HOD by paying prescribed fees.

A student can take up a maximum of two theory courses and one laboratory course in a semester immediately after the semester end examinations of that semester. The students who are not taking regular semester courses may additionally register for one more theory course.

The documents for registration of course and monitoring the candidates registered for course repetition are available from the departments and college website.

14 Minimum Academic Requirements for Promotion:

a. Semester Promotion

A student is eligible to register for SEE if he/she satisfies the following conditions. However, the student can appear only for the SEE of those courses in which the student is qualified (Q).

i) Attendance Requirements

A student shall be eligible to register for SEE, if he / she acquires a minimum of 75% of attendance in aggregate of all the courses in a semester.

Condonation of shortage of attendance in aggregate up to 10% (65% and above and below 75%) in each semester may be granted on genuine medical grounds with a doctor certificate and duly approved by the principal.

A shortage of attendance below 65% in aggregate shall in NO case be condoned. Students whose shortage of attendance is not condoned in any semester are not eligible to take their SEE of that semester and will be considered as detained in that semester.

If a student does not satisfy the attendance requirements of the present semester, he / she will not be promoted to the next semester (considered as detained in the present semester). They may seek readmission for that semester when offered next.

A stipulated fee shall be payable towards condonation of shortage of attendance to the college.

ii) Qualification in CIE

A student must qualify in a minimum of three courses in each semester (as per Clause 8.2.4) in CIE to register for the SEE of that semester.

If a student does not satisfy the above conditions, he / she will not be promoted to the next semester (considered as detained in that semester). They may seek readmission for the detained semester when offered next.

b. Promotion / Detention Conditions based on the minimum credits to be secured by the student:

A student shall be promoted from I to II, III to IV, V to VI and VII to VIII semesters if he / she fulfills the academic requirement as specified in 14.a). For other semesters i.e. II to III (1st year to 2nd year), IV to V (2nd year to 3rd year) and VI to VII (3rd year to 4th year) semesters, the following criteria is to fulfilled in addition to 14.a) clause.

i) II semester to III semester (1st year to 2nd year)

A student shall be promoted from II semester to III semester only if he / she fulfills the academic requirement of securing 25% of the credits in the courses that have been studied up to I Semester.

ii) IV semester to V semester (2nd year to 3rd year)

A student shall be promoted from IV semester to V semester only if he/she fulfills the academic requirement of securing 40% of the credits in the courses that have been studied up to III Semester.

iii) VI semester to VII semester (3rd year to 4th year)

A student shall be promoted from VI semester to VII semester only if he/she fulfills the academic requirements of securing 40% of the credits in the courses that have been studied up to V semester.

If a student is not promoted or detained for want of credits in a particular semester as per clause 14.b) above, the student may secure the required credits through supplementary examinations and only after securing the required credits he / she shall be permitted to join in the III or V or VII Semester as the case may be.

c. With-holding of Results

If the candidate has any dues not paid to the college or case of indiscipline or malpractice is pending against him/her, the result of the candidate shall be withheld in such cases until the issue is resolved.

15 Summer Internships:

Students shall undergo two summer internships each for a minimum of four weeks duration at the end of second and third years of the program for 2 credits each. The organization in which the student wishes to carry out Internship needs to be approved by Internal Department Committee comprising Head of Department and two senior faculty members. The student shall submit a report along with an internship certificate from the organization. The evaluation of the first and second summer internships shall be conducted at the end of the V Semester & VII semester respectively.

Completion of the internship is mandatory, if any student fails to complete internship, he/she will not be eligible for the award of degree. In such a case, the student shall repeat the internship in the subsequent summer. The student pursuing two summer internships in the same summer is not permitted.

Community Service Project focussing on specific local issues shall be an alternative to the four weeks of summer Internship. The Community Service Project shall be for 4 weeks in duration which includes preliminary survey for 1 week, community awareness

Bapatla Engineering College: Bapatla -522102 (Autonomous)

Approved by AICTE :: Affiliated to ACHARYA NAGARJUNA UNIVERSITY

Department of Computer Science & Engineering

programs for one week, community immersion program in consonance with Government agencies for 1 week and a community exit report (a detailed report) for 1 week.

- 16** A student shall register and put-up minimum attendance in all 160 credits and earn all the 160 credits. In the case of lateral entry students, the number of credits is 121.
- 17** Students who fail to earn 160 credits as indicated in the course structure within eight academic years from the year of their admission shall forfeit their seat in B.Tech. Program, and their admission shall be cancelled. However, for the students availing the Gap year facility, this period shall be extended by corresponding gap year duration availed.

Lateral entry students who fail to earn 121 credits as indicated in the course structure within six academic years from the year of their admission shall forfeit their seat in B.Tech. Course and their admission shall be cancelled. However, for the students availing gap year facility, this period shall be extended by corresponding gap year duration availed.

18 Securing Credits and award of Grade Points: Grading

After each course is evaluated for 100 marks, the marks obtained in each course will be converted to a corresponding letter grade as given below, depending on the range in which the marks obtained by the student fall.

Structure of Grading of Academic Performance

Range in which the % of marks in the course fall	Grade	Grade Points Assigned
≥ 90	S (Superior)	10
80-89	A (Excellent)	9
70-79	B (Very Good)	8
60-69	C (Good)	7
50-59	D (Average)	6
40-49	E (Below Average)	5
< 40	F (Fail)	0
Absent	Ab (Absent)	0

A student obtaining Grade F shall be considered failed and will be required to reappear for that course when the next supplementary SEE is offered. Same is the case with a student who obtains 'Ab' in the SEE.

Since there are no credits for Mandatory /Audit courses, only 'Pass' or 'Fail' shall be mentioned for such courses.

19 Semester Grade Point Average (SGPA) and Cumulative Grade Point Average (CGPA):

- a. The Semester Grade Point Average (SGPA) in a particular semester is the ratio of sum of the product of the number of credits with the grade points scored by a student in all the courses taken by a student and the sum of the number of credits of all the courses undergone by a student, i.e.,

$$SGPA = \frac{\sum_{i=1}^n C_i \times GP_i}{\sum_{i=1}^n C_i}$$

where C_i is the number of credits of the i^{th} course and GP_i is the grade point scored by the student in the i^{th} course.

- b. The Cumulative Grade Point Average (CGPA) will be computed in the same manner considering all the courses undergone by a student over all the semesters of a program, i.e.,

$$CGPA = \frac{\sum_{j=1}^m SGPA_j \times TC_j}{\sum_{j=1}^m TC_j}$$

where “ $SGPA_j$ ” is the SGPA of the j^{th} semester and TC_j is the total number of credits in that semester.

- c. Both SGPA and CGPA shall be truncated to 2 decimal points and reported in the transcripts.
- d. While computing the SGPA, the courses in which the student is awarded Zero grade points will also be included.
- e. Grade Point: It is a numerical weightage allotted to each letter grade on a 10-point scale.
- f. Letter Grade: It is an index of the performance of students in a said course. Grades are denoted by letters S, A, B, C, D, E and F.

20 Award of Class:

After a student has satisfied the requirements prescribed for the completion of the program and is eligible for the award of B. Tech. degree, he / she shall be placed in one of the following four classes.

Class Awarded	CGPA Secured
First Class with Distinction	≥ 7.5
First Class	$\geq 6.5 < 7.5$
Second Class	$\geq 5.5 < 6.5$

Pass Class	$\geq 5.0 < 5.5$
------------	------------------

21 Gap Year:

Gap year concept for Student Entrepreneur shall be introduced and outstanding students who wish to pursue entrepreneurship / become entrepreneur are allowed to take a break of one year at any time after II year to pursue entrepreneurship program / to establish startups. This period may be extended to two years at the most and these two years would not be counted as the maximum time for graduation.

An evaluation committee shall be constituted by the College to evaluate the proposal submitted by the student and the committee shall decide whether to permit the student(s) to avail themselves of the Gap Year.

After rejoining the student can pursue the remaining period of study under transitory regulations (if the regulation changes).

22 Transitory Regulations:

Discontinued or detained candidates (as per clause 14.b) are eligible for readmission as and when the semester is offered and after fulfillment of academic regulations. Candidates who have been detained as per clause 14.a) are eligible for readmission into the unfinished semester from the date of commencement of class work with the same or equivalent subjects as and when subjects are offered.

Candidates who were permitted with Gap Year shall be eligible for rejoining into the succeeding year of their B.Tech from the date of commencement of class work.

The readmitted students must follow the regulations in which he/she is admitted and residual courses if any must be completed based on the equivalent courses for each semester specified by the BOS considering the previous and readmitted regulations.

23 Credit Transfer Policy:

Adoption of MOOCs is mandatory, to enable blended model of teaching-learning as also envisaged in the NEP 2020. As per University Grants Commission (Credit Framework for Online Learning Courses through SWAYAM) Regulation, 2016, the Institution shall allow up to a maximum of 15 credits (5 courses, approximately 10% for the total credits of the program) through MOOCs platform.

- The Institution shall offer credit mobility for MOOCs and give the equivalent credit weightage to the students for the credits earned through online learning courses.
- Student registration for the MOOCs shall be only through the respective department of the institution, it is mandatory for the student to share necessary information and take prior approval from the department.
- Credit transfer policy will be applicable to the Professional Elective Courses, Job Oriented Elective Courses, Open Elective Courses & Management Courses only.
- The concerned department shall identify the courses permitted for credit transfer.
- The department shall notify the list of the online learning courses at the beginning of semester eligible for credit transfer.

Bapatla Engineering College: Bapatla -522102 (Autonomous)

Approved by AICTE :: Affiliated to ACHARYA NAGARJUNA UNIVERSITY

Department of Computer Science & Engineering

- f. The department shall designate a faculty member as a Mentor for each course to guide the students from registration till completion of the course.
- g. The department shall ensure no overlap of MOOC exams with that of the university examination schedule. In case of delay in results, the Institution will re-issue the marks sheet for such students.
- h. Credits transfer will be considered only after successful completion of the course and submitting a certificate issued by the competent authority along with the percentage of marks and/or grades.
- i. The institution shall submit the following to the examination section:
 - i. List of students who have passed MOOC courses in the current semester along with the certificate of completion.
 - ii. Undertaking form filled by the students for credit transfer.
- j. The Institution shall resolve any issues that may arise in the implementation of this policy from time to time and shall review its credit transfer policy in the light of periodic changes brought by UGC, SWAYAM, NPTEL and state government.

24 Academic Bank of Credits (ABC):

The College has implemented Academic Bank of Credits (ABC) to promote flexibility in curriculum as per NEP 2020 to

- a. Provide option of mobility for learners across the universities of their choice.
- b. Provide option to gain the credits through MOOCs from approved digital platforms.
- c. Facilitate award of Certificate / Diploma / Degree (B.Sc) in line with the accumulated credits in ABC
- d. Execute Multiple Entry and Exit system with credit count and credit transfer.

25 Exit Policy:

The students can choose to exit the four-year programme at the end of first / second / third year of study.

- a. **UG Certificate** (in Field of study / discipline) - Programme duration: First year (first two semesters) of the undergraduate programme, 39 credits followed by an additional exit 10-credit bridge course(s) lasting two months, including at least 6-credit job-specific internship / apprenticeship that would help the candidates acquire job-ready competencies required to enter the workforce.
- b. **UG Diploma** (in Field of study / discipline) - Programme duration: First two years (first four semesters) of the undergraduate programme, 80 credits followed by an additional exit 10-credit bridge course(s) lasting two months, including at least 6-credit job-specific internship / apprenticeship that would help the candidates acquire job-ready competencies required to enter the workforce.
- c. **Bachelor of Science** (in Field of study / discipline) i.e., B.Sc. Engineering in (Field of study / discipline)- Programme duration: First three years (first six semesters) of the undergraduate programme, 120 credits.

26 Student Transfers

Student transfers shall be as per the guidelines issued by the Government of Andhra Pradesh and the affiliated University from time to time.

27 Punishments for Malpractice cases – Guidelines:

- a) If any student caught under malpractice during the CIE examinations, the entire cycle of examinations will be cancelled and awarded zero marks for all the courses during that cycle. For example, if any student is caught while doing malpractice in an AAT, the AAT marks of all the courses in that cycle will be cancelled. Similar punishment will be considered for mid-term examinations also.
- b) For Semester End Examinations, the examinations committee may take the following guidelines into consideration while dealing with the suspected cases of malpractice reported by the invigilators / squad members etc. The punishment may be more severe or less severe depending on the merits of the individual cases.

S. No.	Nature of Malpractice/Improper conduct	Punishment
1.	Possesses or keeps accessible in examination hall, any paper, note book, programmable calculators, Cellphones, pager, palm computers or any other form of material concerned with or related to the course of the examination (theory or practical) in which he is appearing but has not made use of (material shall include any marks on the body of the student which can be used as an aid in the course of the examination).	Expulsion from the examination hall and cancellation of the performance in that course only.
2.	Uses objectionable, abusive or offensive language in the answer paper or in letters to the examiners or writes to the examiner requesting him to award pass marks.	Cancellation of the performance in that course.
3.	Copying detected on the basis of internal evidence, such as, during valuation or during special scrutiny.	Cancellation of the performance in that course and all other courses the candidate has appeared including practical examinations and project work of that semester/year examinations.
4.	Gives assistance or guidance or receives it from any other student orally or by any other body language methods or communicates through cell phones with any other student or persons in or outside the exam hall in respect of any matter.	Expulsion from the examination hall and cancellation of the performance in that course only of all the students involved. In case of an outsider, he will be handed over to the police and a case shall be registered against him.

Bapatla Engineering College: Bapatla -522102 (Autonomous)

Approved by AICTE :: Affiliated to ACHARYA NAGARJUNA UNIVERSITY

Department of Computer Science & Engineering

5.	Has copied in the examination hall from any paper, book, programmable calculators, palm computers or any other form of material relevant to the course of the examination (theory or practical) in which the student is appearing.	Expulsion from the examination hall and cancellation of the performance in that course and all other courses including practical examinations and project work of that semester/year.
6.	Comes in a drunken condition to the examination hall.	Expulsion from the examination hall and cancellation of the performance in that course and all other courses including practical examinations and project work of that semester/year.
7.	Smuggles in the Answer book or takes out or arranges to send out the question paper during the examination or answer book during or after the examination	Expulsion from the examination hall and cancellation of performance in that course and all the other courses including practical examinations and project work of that semester/year. The student is also debarred for two consecutive semesters from class work and all examinations. The continuation of the course by the student is subject to the academic regulations in connection with forfeit of seat.
8.	Refuses to obey the orders of the Chief Superintendent / any officer on duty or misbehaves or creates disturbance of any kind in and around the examination hall or organizes a walk out or instigates others to walk out, or threatens the officer-in charge or any person on duty in or outside the examination hall of any injury to his person or to any of his relations whether by words, either spoken or written or by signs or by visible representation, assaults the officer-in-charge, or any person on duty in or outside the examination hall or any of his relations, or indulges in any other act of misconduct or mischief which result in damage to or destruction of property in the examination hall or any part of the College campus or engages in any other act which in the opinion of the officer on duty amounts to use of unfair means or	In case of students of the college, they shall be expelled from examination halls and cancellation of their performance in that course and all other courses of that semester/year. The students also are debarred and forfeit their seats. In case of outsiders, they will be handed over to the police and a police case shall be registered against them.

Bapatla Engineering College: Bapatla -522102 (Autonomous)

Approved by AICTE :: Affiliated to ACHARYA NAGARJUNA UNIVERSITY

Department of Computer Science & Engineering

	misconduct or has the tendency to disrupt the orderly conduct of the examination.	
9.	Leaves the exam hall taking away answer script or intentionally tears up the script or any part there of inside or outside the examination hall.	Expulsion from the examination hall and cancellation of performance in that course and all the other courses including practical examinations and project work of that semester/year. The candidate is also debarred for two consecutive semesters from classwork and all end examinations. The continuation of the course by the candidate is subject to the academic regulations in connection with forfeiture of seat.
10.	Possesses any lethal weapon or firearm in the examination hall.	Expulsion from the examination hall and cancellation of the performance in that course and all other courses including practical examinations and project work of that semester/year. The student is also debarred and forfeits the seat.
11.	If student of the college, who is not a candidate for the particular examination or any person not connected with the college indulges in any malpractice or improper conduct mentioned in S.No. 7 to S.No. 9.	For Student of the college: Expulsion from the examination hall and cancellation of the performance in that course and all other courses including practical examinations and project work of that semester/year. The candidate is also debarred and forfeits the seat. Person(s) who do not belong to the College will be handed over to police and, a police case shall be registered against them.
12.	Impersonates any other student in connection with the examination	The student who has impersonated shall be expelled from examination hall. The student is debarred from writing the remaining exams, and rusticated from the college for one academic year during which period the student will not be permitted to write any exam. If the imposter is an outsider, he will be

		handed over to the police and a case shall be registered against him. The performance of the original student who has been impersonated, shall be cancelled in all the courses of the examination including practical's and project work of that semester/ year. The student is rusticated from the college for two consecutive years during which period the student will not be permitted to write any exam. The continuation of the course by the student is subject to the academic regulations in connection with forfeiture of seat.
13.	If any malpractice is detected which is not covered in the above S.No. 1 to S.No. 12 items, it shall be reported to the college academic council for further action and award suitable punishment.	
14.	Malpractice cases identified during sessional examinations will be reported to the examination committee nominated by Academic council to award suitable punishment.	

28 ADDITIONAL ACADEMIC REGULATIONS:

- Any attempt to impress upon the teachers, examiners, faculty and staff of Examinations, bribing for either marks or attendance will be treated as malpractice.
- When a component of Continuous Internal Evaluation (CIE) or Semester End Examination (SEE) is cancelled as a penalty, he/she is awarded zero marks in that component.

29 AMENDMENTS TO REGULATIONS:

The Academic Council of Bapatla Engineering College (Autonomous) reserves the right to revise, amend, change or nullify the Regulations, Schemes of Examinations and / or Syllabi, Academic schedules, Examination schedules, Examination pattern, Moderation to students, Special opportunity to complete degree beyond stipulated time and any other matter pertained that meets to the needs of the students, society and industry without any notice and the decision is final.

DEPARTMENT VISION

To produce Computer Science Engineers with Global Standards who can handle the challenges in developing software services and products needed by the society and industry with their innovations and services.

DEPARTMENT MISSION

- To impart high quality education with effective teaching and learning process.
- To provide an environment where the students can handle research problems confidently.
- To prepare the students with latest technologies with fidelity towards industry.
- To inculcate professional ethics and human values in handling the engineering challenges.

PROGRAM EDUCATIONAL OBJECTIVES

PEO1: Choose diverse professional careers in software industry, research, academia, engineering, and administrative services.

PEO2: Apply the principles of basic sciences, mathematics and computer science to solve real world problems using digital computing systems.

PEO3: Analyze, design, implement and evaluate robust, scalable and cost-effective computer-based systems and processes in the industry with sustained self learning.

PEO4: Be aware of professional and ethical practices in the context of social impacts of computing.

PROGRAM SPECIFIC OUTCOMES

PSO1: Domain knowledge-Acquire knowledge of hardware functionality, design and development of software components required to process the information.

PSO2: Problem solving skills- Analyse data, Identify required data structures, design suitable algorithms, develop, operate and maintain software for real world problems.

PSO3: Paradigm shifts-Understand the progressive changes in computing, possess knowledge of context aware applicability of paradigms.

LINEAR ALGEBRA AND ORDINARY DIFFERENTIAL EQUATIONS														
I B. Tech. – I Semester (Code: 24CS101)														
Lectures	2	Tutorial	1	Practical	0	Credits	3							
Continuous Internal Evaluation			40	Semester End Examination					60					
Pre-Requisite: None.														
Course Objectives:														
➤ Solve a system of linear homogeneous and non-homogeneous equations, finding the inverse of a given square matrix and also its Eigen values and Eigen vectors ➤ Identify the type of a given differential equation and select and apply the appropriate analytical technique for finding the solution of first order ordinary differential equations. ➤ Create and analyze mathematical models using higher order differential equations to solve application problems that arise in engineering. ➤ Verify mean value theorems and expand functions of a single variable using Taylor's and Maclaurin's series.														
Course Outcomes: At the end of this course, Students will be able to														
CO1	Find the eigen values and eigen vectors of a given matrix and its inverse.											BL3		
CO2	Apply the appropriate analytical technique to find the solution of a first order ordinary differential equation.											BL3		
CO3	Solve higher order linear differential equations with constant coefficients arise in engineering applications.											BL3		
CO4	Learn the applications of mean value theorems and Taylor's theorem.											BL2		
Mapping of Course Outcomes with Program Outcomes & Program Specific Outcomes														
	POs											PSOs		
CO	1	2	3	4	5	6	7	8	9	10	11	1	2	3
CO1	3	3	2	-	-	-	-	-	-	-	2	-	-	-
CO2	3	3	3	-	-	-	-	-	-	-	2	-	-	-
CO3	3	3	3	-	-	-	-	-	-	-	2	-	-	-
CO4	2	2	2	-	-	-	-	-	-	-	2	-	-	-
UNIT-I													12 hours	
Linear Algebra: Rank of a Matrix; Elementary transformations of a matrix; Gauss-Jordan method of finding the inverse; Normal form of a matrix, Consistency of linear System of equations: Rouché's theorem, System of linear Non-homogeneous equations, System of linear homogeneous equations; vectors; Eigen values; properties of Eigen values(without proofs); Cayley-Hamilton theorem (without proof). [Sections: 2.7.1; 2.7.2; 2.7.6; 2.7.7; 2.10.1; 2.10.2; 2.10.3; 2.12; 2.13; 2.14; 2.15.]														
UNIT-II													12 hours	
Differential Equations of first order: Definitions; Formation of a Differential equation; Solution of a Differential equation; Equations of the first order and first degree; variables separable; Linear Equations; Bernoulli's equation; Exact Differential equations; Equations														

reducible to Exact equations: I.F found by inspection, I.F of a Homogeneous equation, In the equation $M dx + N dy = 0$, $\frac{\frac{\partial M}{\partial y} - \frac{\partial N}{\partial x}}{N}$ is a function of x and $\frac{\frac{\partial N}{\partial x} - \frac{\partial M}{\partial y}}{M}$ is a function of y.	
Applications of a first order Differential equations: Newton's law of cooling; Rate of decay of Radio-active materials. [Sections: 11.1; 11.3; 11.4.1; 11.5; 11.6; 11.9; 11.10; 11.11; 11.12.1; 11.12.2; 11.12.4; 12.6; 12.8]	
UNIT-III	12 hours
Linear Differential Equations: Definitions; Theorem; Operator D; Rules for finding the complementary function; Inverse operator; Rules for finding the Particular Integral; Working procedure to solve the equation; Method of Variation of Parameters; Applications of Linear Differential Equations: Introduction, Oscillatory Electrical Circuits. [Sections: 13.1; 13.2; 13.3; 13.4; 13.5; 13.6; 13.7; 13.8.1; 14.1; 14.5].	
UNIT-IV	12 hours
Differential Calculus: Mean Value Theorems: Rolle's theorem, Lagrange's mean value theorem with their geometrical interpretation. Cauchy's mean value theorem. Taylor's and Maclaurin theorems with remainders (without proof), Maclaurin's series, Expansion by use of known series, Taylor's series. [4.3.1; 4.3.2; 4.3.3; 4.3.4; 4.4.1; 4.4.2; 4.4.3]

SEMICONDUCTOR PHYSICS AND NANO MATERIALS														
I B. Tech. – I Semester (Code: 24CS102)														
Lectures	3	Tutorial	0	Practical	0	Credits	3							
Continuous Internal Evaluation			40	Semester End Examination				60						
Pre-Requisite: None.														
Course Objectives:														
➤ Build the interest on the concept of quantum mechanics and its importance to solve and evaluate the properties of materials (conductors and semiconductors) ➤ Provides various types of properties of semiconductor materials and their importance in various device fabrications ➤ Educate the student on various opto-electronic devices and their applications. ➤ Provide information about the principles of processing, manufacturing and characterization of nano materials, nanostructures and their applications														
Course Outcomes: At the end of this course, Students will be able to														
CO1	Understand concepts of quantum mechanics and its applications to explain material properties								BL2					
CO2	Know the concept of Fermi level and various semiconductor junctions.								BL1					
CO3	Familiar with working principles of various opto-electronic devices and their applications.								BL2					
CO4	Understand importance of nano-materials and their characteristic properties.								BL2					
Mapping of Course Outcomes with Program Outcomes & Program Specific Outcomes														
	POs											PSOs		
CO	1	2	3	4	5	6	7	8	9	10	11	1	2	3
CO1	3	3	-	-	-	-	-	-	-	-	-	2	3	3

CO3	3	3	2	-	-	-	-	-	-	-	-	2	3	3
CO4	3	3	3	-	-	-	-	-	-	-	-	2	3	3
UNIT-I										12 hours				
QUANTUM MECHANICS AND APPLICATIONS: Schrodinger time independent wave equation, Applications: Particle in one dimensional box, Quantum Tunneling, Scanning Tunneling Microscope, Sommerfeld free electron theory: conductivity of metals and concept of Fermi level, Failure of quantum free electron theory (Qualitative), Band theory of solids (Kronig –Penny model), E-K diagrams, Effective mass, Concept of hole, Types of Electronic materials: Metals, Semiconductors and Insulators.														
UNIT-II										12 hours				
SEMICONDUCTORS AND PROPERTIES: Introduction to semiconductors, intrinsic and extrinsic semiconductors, Direct and Indirect band gap semiconductors. Density of states, carrier concentration equations, Fermi level and temperature dependence, Drift and Diffusion currents, Continuity equation, P-N junction diode (V-I characteristics).														
UNIT-III										12 hours				

OPTO-ELECTRONIC DEVICES AND DISPLAY DEVICES: Principle and working of LED, Semiconducting laser (Laser diode), Photo detectors: Photo diode, PIN & APD Diode, Applications of Photo detectors, Photo voltaic effect, Solar cell, Efficiency of solar cell and applications, Types of liquid crystals, Liquid crystal display(LCD), Opto electric effect(Kerr effect), Magneto optic effect (Faraday Effect)	
UNIT-IV	12 hours
NANO MATERIALS: Introduction to nano technology, quantum confinement, surface to volume ratio, properties of nano materials, synthesis of nano-materials: CVD, sol-gel methods, laser ablation. Carbon nano tubes: types, properties, applications. Characterization of nano materials: XRD, SEM, applications of nano materials.

COMMUNICATIVE ENGLISH															
I B. Tech. – I Semester (Code: 24CS103)															
Lectures	2	Tutorial	0	Practical	0	Credits	2								
Continuous Internal Evaluation				40	Semester End Examination						60				
Pre-Requisite: None.															
Course Objectives:															
➤ Enhance the vocabulary competency of the students ➤ Enable the students to demonstrate proficiency in the use of written English, including proper spelling, grammar, and punctuation ➤ Enhance theoretical and conceptual understanding of the elements of grammar ➤ Understand and apply the conventions of academic writing in English															
Course Outcomes: At the end of this course, Students will be able to															
CO1	Understand how to build academic vocabulary to enrich their writing skills													BL2	
CO2	Produce accurate grammatical sentences													BL3	
CO3	Analyse the content of the text in writing													BL4	
CO4	Produce coherent and unified paragraphs with adequate support and detail													BL6	
Mapping of Course Outcomes with Program Outcomes & Program Specific Outcomes

UNIT-I															
													8 hours		
1.1 Vocabulary Development: Word formation-Formation of Nouns, Verbs & Adjectives from Root words-Suffixes and Prefixes															
1.2 Essential Grammar: Prepositions, Conjunctions, Articles															
1.3 Basic Writing Skills: Punctuation in writing															
1.4 Writing Practices: Mind Mapping, Paragraph writing (structure-Descriptive, Narrative, Expository & Persuasive)															
UNIT-II															
													8 hours		
2.1 Vocabulary Development: Synonyms and Antonyms															
2.2 Essential Grammar: Concord, Common Errors: Practice															
2.3 Basic Writing Skills: Coherence in Writing: Jumbled Sentences															
2.4 Writing Practices: Letter writing															
UNIT-III															
													8 hours		
3.1 Vocabulary Development: One word Substitutes															
3.2 Essential Grammar: Tenses, Modal Verbs, Voices															
3.3 Basic Writing Skills: Using Phrases and clauses															
3.4 Writing Practices: Note Making

INTRODUCTION TO PROGRAMMING														
I B. Tech. – I Semester (Code: 24CS104)														
Lectures	3	Tutorial	0	Practical	0	Credits	3							
Continuous Internal Evaluation			40	Semester End Examination			60							
Pre-Requisite: None.														
Course Objectives:														
➤ Understand basic concepts of C Programming such as: C-tokens, Operators, Input/output, and Arithmetic rules. ➤ Develop problem-solving skills to translate ‘English’ described problems into programs written using C language. ➤ Use conditional branching, looping and Arrays. ➤ Understand the concepts of functions and recursion in C.														
Course Outcomes: At the end of this course, Students will be able to														
CO1	Choose the right data representation formats based on the requirements of the problem and solve the mathematical problems using operators.						BL3							
CO2	Solve problems which contain multiple decisions using else...if.						BL3							
CO3	Work with lists and matrices using arrays.						BL3							
CO4	Solve real time complex problems by decomposition using user defined functions.						BL4							
Mapping of Course Outcomes with Program Outcomes & Program Specific Outcomes														
	POs											PSOs		
CO	1	2	3	4	5	6	7	8	9	10	11	1	2	3
CO1	3	2	-	1	-	1	-	-	-	-	-	-	3	2
CO2	-	1	3	2	1	1	-	-	-	-	-	-	2	1
CO3	-	1	2	3	-	1	-	-	-	-	-	-	2	2
CO4	2	1	1	2	-	1	-	-	-	-	-	-	2	1
UNIT-I														12 hours
Introduction: Computers, Classification of Computers, Software Life Cycle, Algorithms, Flowcharts, Structured Programming, Compilers, Linker, Preprocessor, Standard Input and Output Devices, Popular Features of C.														
Variables and Expressions: Introduction, Character Set, Identifiers and Keywords, Variables, Displaying Variables, Reading Variables, Characters and Character Strings, Qualifiers, typedef Statement, Promotion and Typecasting, Value-initialized Variables, Constants, const Qualifier, Operators and Expressions, Operator Precedence and Associativity, Programming Examples.														
UNIT-II														12 hours
Basic Input-Output: Introduction, Single Character Input-Output, String Input and Output, General Output, General Input, Types of Characters in Format Strings, scanf Width Specifier,														

Search Sets, Assignment Suppression Character, Format Specifiers for scanf, Input Fields for scanf, When scanf Stops Scanning, Programming Examples.	
Control Structures: Introduction, if Statement, if-else Statement, Multi-way Decisions, Compound Statements, Loops - for Loop, while Loop, do-while Loop, break Statement, switch Statement, continue Statement, goto Statement, Programming Examples.	
UNIT-III	12 hours
Arrays and Strings: Introduction, How Arrays are Useful? Multidimensional Arrays, Strings, Arrays of Strings, Functions in string.h, Programming Examples.	
Scope and Extent: Introduction, Scope, Extent.	
UNIT-IV	12 hours
Functions: Introduction, Function main, Where are Functions Useful? Functions Accepting More than One Parameter, User Defined and Library Functions, Concepts Associated with Functions (Review), Function Parameters, Return Values, Recursion, Comparison of Iteration and Recursion, Variable Length Argument Lists, Programming Examples.	
Text Books :	1. Mastering C by K R Venugopal and Sudeep R Prasad McGraw -Hill Edition.

ENGINEERING GRAPHICS														
I B. Tech. – I Semester (Code: 24CSL101)														
Lectures	1	Tutorial	0	Practical	3	Credits	2.5							
Continuous Internal Evaluation				40	Semester End Examination						60			
Pre-Requisite: None.														
Course Objectives:														
➤ Clear picture about the importance of engineering graphics in the field of engineering ➤ The drawing skills and impart students to follow Bureau of Indian Standards ➤ Give an idea about Geometric constructions and orthographic projections ➤ Imagination skills about orientation of points, surfaces and solids ➤ Basic drafting skills of AutoCAD														
Course Outcomes: At the end of this course, Students will be able to														
CO1	Draw projections of points and projections of lines using Auto CAD												BL3	
CO2	Plot projections of surfaces like circle, pentagon, hexagon and rhombus												BL3	
CO3	Plot the Projections of solids like Prisms and pyramids												BL3	
CO4	Convert the Isometric views into Orthographic views for simple objects.												BL4	
Mapping of Course Outcomes with Program Outcomes & Program Specific Outcomes														
	POs											PSOs		
CO	1	2	3	4	5	6	7	8	9	10	11	1	2	3
CO1	1	2	1	-	-	-	-	-	-	-	-	1	1	2
CO2	3	2	1	-	-	-	-	-	-	-	-	2	3	2
CO3	1	2	3	-	-	-	-	-	-	-	-	1	3	2
CO4	1	2	1	-	-	-	-	-	-	-	-	1	2	3
UNIT-I													16 hours	
INTRODUCTION: Introduction to Engineering drawing, geometrical constructions.														
INTRODUCTION TO AUTOCAD: Advantages of AutoCAD over manual drafting, Basics of sheet selection, Draw tools, Modify tools, Dimensioning.														
METHOD OF PROJECTIONS: Principles of projection, First angle and third angle projections, projections of points, projections of straight lines inclined to one plane only.														
UNIT-II													16 hours	
PROJECTIONS OF PLANES: Projections of plane figures: circle, triangle, pentagon, hexagon and rhombus.														
UNIT-III													16 hours	
PROJECTIONS OF SOLIDS: Projections of solids like square, pentagonal, hexagonal prisms and pyramids, axis inclined to one plane only.														
UNIT-IV													16 hours

SEMICONDUCTOR PHYSICS LAB														
I B.Tech – I Semester (Code: 24CSL102)														
Lectures	0		Tutorial		0		Practical				2		Credits	1
Continuous Internal Evaluation					40		Semester End Examination					60		
Pre-Requisite: None.														
Course Objectives:														
➤ Basic experiments such as Magnetic Field Measurements, Hall Effect and LCR resonance give the knowledge to apply them in magnetic applications and circuits design. ➤ The measurements relating to various physical parameters of materials make the student to understand their utility, design and fabrication of several devices. ➤ The experiments like CRO, Solar Cell, Photocell provides the thorough understanding of Opto Electronic devices useful in Engineering and Industrial applications. ➤ Utilization of the principles of light such as interference and diffraction to measure wavelength and radius of curvature of Lenses.														
Course Outcomes: At the end of this course, Students will be able to														
CO1	Acknowledge the important aspects of earth magnetic field, realize the use of Maxwell's equations in various magnetic applications												BL2	
CO2	Realization of material properties and parameters												BL2	
CO3	Get hands-on experience in various opto-electronic devices like CRO, Solar Cell, Photo Cell and their applications												BL3	
CO4	Apply the phenomenon of interference and LASER principles to find radius of curvature and wavelength respectively by various methods												BL3	
Mapping of Course Outcomes with Program Outcomes & Program Specific Outcomes														
	POs											PSOs		
CO	1	2	3	4	5	6	7	8	9	10	11	1	2	3
CO1	3	3	2	2	-	-	-	2	-	-	-	-	-	-
CO2	3	3	2	2	-	-	-	2	2	-	-	-	-	-
CO3	3	3	2	2	2	-	-	2	-	-	-	-	-	-
CO4	3	2	-	-	-	-	-	-	-	-	2	-	-	-
LIST OF EXPERIMENTS														
													32 hours	
1. Determination of acceleration due to gravity at a place using compound pendulum.														
2. To study the variation of intensity of magnetic field along the axis of a circular coil using Stewart-Gee's apparatus.														
3. To draw the characteristic curves of P-N Junction diode.														
4. Determination of radius of curvature of a Plano convex lens by forming Newton's rings.														
5. Determination of wavelengths of mercury spectrum using grating normal incidence method.														

6. To draw the characteristic curves of Zener diode.
7. To draw the resonant characteristic curves of L.C.R. series circuit and calculate the Resonant frequency.
8. To draw the characteristic curves of a photocell and calculate the maximum velocity of electron.
9. Verify the laws of transverse vibration of stretched string using Sonometer.
10. Determination of rigidity modulus of the given material of the wire using Torsional pendulum.
11. To draw the load characteristic curves of a solar cell.
12. Determination of Hall coefficient of a semiconductor.
13. Determination of voltage and frequency of an A.C. signal using C.R.O.
14. Determination of Forbidden energy gap of Si & Ge.
15. Determination of wavelength of laser source using Diode laser.
16. To draw the characteristic curves of Photo diode.
17. To draw the Diode valve characteristics.

Any three experiments are virtual

Note: A minimum of **ten (10 no.)** experiments to be done and recorded

ENGLISH COMMUNICATION SKILLS LAB															
I B.Tech – I Semester (Code: 24CSL103)															
Lectures	0	Tutorial	0	Practical	2	Credits	1								
Continuous Internal Evaluation			40	Semester End Examination							60				
Pre-Requisite: None.															
Course Objectives:															
➤ Comprehend the importance, barriers and strategies of listening skills in English. ➤ Illustrate and impart practice Phonemic symbols, stress and intonation. ➤ Practice oral skills and receive feedback on learners’ performance. ➤ Practice language in various contexts through pair work, role plays, group work and dialogue conversations															
Course Outcomes: At the end of this course, Students will be able to															
CO1	Better understand the nuances of English language through audio- visual experience and group activities												BL2		
CO2	Develop neutralization of accent for intelligibility												BL3		
CO3	Build confidence to enhance their speaking skills												BL3		
CO4	Use effective vocabulary both in formal and informal situations												BL3

LIST OF EXPERIMENTS								48 hours						
- Write a C program to demonstrate the use of printf statement to print values of variables of different data types. - Write a C program to demonstrate the use of printf and scanf statements to read and print values of variables of different data types. - Write a C program to perform addition, subtraction, multiplication, division and modulo division on two integer numbers. - Write a C program for electricity bill tacking different categories of users, different slabs in each category. (using nested if else statement). - Write a C program to evaluate the following using loops $1+x^2/2!+x^4/4!+...upto\ 5\ terms$														

- b) $x + x^3/3! + x^5/5! + \dots$ upto 5 terms
5. Write a C program to check whether the given number is
- a) Prime or not
 - b) Perfect or abundant or deficient
6. Write a C program to print the following patterns
- i)

```
1
12
123
1234
```
 - ii)

```
1
1 2 1
1 2 3 2 1
1 2 3 4 3 2 1
```
7. Write a C program to find the mean, mode, median, and variance of list of values by using one dimensional array.
8. Write a menu driven program to read a list of numbers and perform the following operations
- a) Print the list
 - b) Delete duplicates from the list
 - c) Reverse the list
9. Write a program to read a list of numbers and search for given number using binary search algorithm and if found display its index otherwise display the message "element not found in the list" using functions.
10. Write a menu driven program to read two matrices and compute their sum and product using functions.
11. Write a menu driven program to read list of student names and perform the following operations using functions.
- a) To print list of names
 - b) To sort them in ascending order
 - c) To print the list after sorting
12. Write a c program that consists of recursive functions to find
- a) Factorial of a given number
 - b) Solve towers of Hanoi with three towers (A,B,C) with three towers initially on tower A.

IT WORKSHOP														
I B.Tech – I Semester (Code: 24CSL105)														
Lectures	0	Tutorial	0	Practical	2	Credits	1							
Continuous Internal Evaluation			40	Semester End Examination						60				
Pre-Requisite: None.														
Course Objectives:														
➤ Introduce the internal parts of a computer, peripherals, and I/O ports. ➤ Demonstrate configuring the system with Windows Operating System and other Application Software's. ➤ Introduce Office tools such as Word processors, Excel and Presentation tools. ➤ Demonstrate AI tools such as ChatGPT, Dialogflow.														
Course Outcomes: At the end of this course, Students will be able to														
CO1	Explore computer system peripherals and components of a mother board.												BL2	
CO2	Evaluate computer system architectures.												BL5	
CO3	Troubleshoot a computer system.												BL4	
CO4	Prepare a PPT, Certificate and Calculate GPA.												BL3	
CO5	Generate a report using Mail merge.												BL6	
CO6	Implement AI Solutions in their respective engineering branches.												BL3	
Mapping of Course Outcomes with Program Outcomes & Program Specific Outcomes

CO6	-	-	3	1	3	-	-	-	-	-	-	3	2	-
LIST OF EXPERIMENTS														
													32 hours	
1. Explore Peripherals of a Computer, Components of a motherboard and its functions. 2. Install and Uninstall System and Application software on a Computer. 3. Disassemble and Assemble the PC. 4. Troubleshoot a computer. 5. Prepare the following using MS office: i) PPT using MS-Power Point. ii) Design a Project Certificate and Newsletter using MS-Word 6. Implement the following using Excel: i) Create an Excel Work sheet for the six subjects and calculate Total, Average, Grade and Rank.														

ii) Merge the contents of two excel sheets using VLOOKUP and sort them.

7. Generating reports using Mail Merge.

8. Prepare a report using Latex or equivalent (FOSS) tool word as word Processors.

9. Prompt Engineering in Chat GPT.

10. Develop a simple AI Chatbot.

NUMERICAL METHODS AND ADVANCED CALCULUS														
I B. Tech. – II Semester (Code: 24CS201)														
Lectures	2	Tutorial	1	Practical	0	Credits	3							
Continuous Internal Evaluation			40	Semester End Examination				60						
Pre-Requisite: None.														
Course Objectives:														
➤ Solve algebraic, transcendental and system of linear equations with the help of numerical methods. ➤ Apply the techniques of numerical integration whenever and wherever routine methods are not applicable and solve the first order ordinary differential equations numerically with the given initial condition using different methods. ➤ Evaluate double and triple integrals and apply them to find areas and volumes. ➤ Evaluate the line, surface and volume integrals and learn their inter-relations and applications.														
Course Outcomes: At the end of this course, Students will be able to														
CO1	Solve non-linear equations and system of linear equations with the help of Numerical techniques.								BL3					
CO2	Solve the first order ordinary differential equations numerically with the given initial condition.								BL3					
CO3	Find the area and volume of plane and three dimensional figures using multiple integrals.								BL3					
CO4	Apply vector integral theorems to obtain the solutions of engineering problems involving circulation, flux, and divergence in vector fields.								BL3

ENGINEERING CHEMISTRY														
I B. Tech. – II Semester (Code: 24CS202)														
Lectures	3	Tutorial	0	Practical	0	Credits	3							
Continuous Internal Evaluation			40	Semester End Examination			60							
Pre-Requisite: None.														
Course Objectives:														
➤ Familiarize importance of usage of various polymers and fuels in household & industry ➤ Outline the basics for the construction of electrochemical cells, batteries and fuel cells. Understand the mechanism of corrosion and how it can be prevented. ➤ Impart the concept of soft and hard waters, softening methods of hard water and various instrumental methods of analysis of samples. ➤ Outline the basics of some advanced concepts like computational chemistry, nanomaterials and liquid crystals.														
Course Outcomes: At the end of this course, Students will be able to														
CO1	Explain the preparation, properties, and applications of plastics, elastomers and biodegradable polymers also to explain calorific value, characteristics and applications of conventional and alternative fuels.						BL2							
CO2	Apply the knowledge of electrochemistry for understanding the working of electrodes and electrochemical energy systems, as well as corrosion theories and protection methods.						BL3							
CO3	Analyse the methods to produce soft water for industrial use and potable water by economical means and study the principles of different analytical techniques and their applications.						BL4							
CO4	Demonstrate the knowledge of computational chemistry, and applications of advanced materials in engineering.						BL3							
Mapping of Course Outcomes with Program Outcomes & Program Specific Outcomes

CO3	3	3	3	2	-	2	-	-	-	-	3	-	-	-
CO4	3	3	2	3	3	-	-	-	-	-	2	-	-	-
UNIT-I														12 hours
POLYMERS AND FUEL CHEMISTRY: Introduction to polymers, functionality of monomers. Thermoplastics and Thermo-setting plastics- Preparation, properties and applications of PVC and Bakelite. Biodegradable polymers- Preparation, properties and applications of PHB and PHBV Elastomers-Preparation, properties and applications of Buna S and Buna N Fuels-Types of fuels, calorific value of fuels-determination by Bomb calorimeter, Liquid Fuels-refining of petroleum, Knocking, Octane and Cetane number, Flue gas analysis by Orsat's														

apparatus, Introduction to alternative fuels-methanol, ethanol and bio fuel-bio diesel (preparation and applications).	
UNIT-II	12 hours
ELECTROCHEMICAL CELLS AND CORROSION: Single electrode potential, Reference electrodes- construction and working of standard hydrogen electrode and calomel electrode; Batteries (Li ion battery and zinc air cells), fuel cells (H₂-O₂, and molten carbonate). Electrochemical sensors-potentiometric sensors and amperometric sensors with examples. Corrosion-Definition, theories of corrosion (chemical and electrochemical), Types of corrosion-galvanic corrosion, differential aeration corrosion, stress corrosion, factors influencing rate of corrosion, corrosion control (cathodic protection), Protective coatings-electroplating (Gold) and electroless plating (nickel).	
UNIT-III	12 hours
WATER TECHNOLOGY: Soft and hard water, Estimation of hardness of water by EDTA Method-numerical problems, Boiler troubles-Priming, foaming, scale and sludge, Caustic embrittlement, Specifications for drinking water- World health organization (WHO) standards, Industrial water treatment- Ion-exchange process, desalination of brackish water by reverse osmosis (RO) and electro dialysis. INSTRUMENTAL METHODS OF ANALYSIS: Electromagnetic spectrum-UV (Principle, instrumentation, and applications), FT-IR (Principle, instrumentation, and applications), magnetic resonance imaging and CT scan (procedure and applications).	
UNIT-IV	12 hours
Organic reactions and synthesis of a drug molecule Computational chemistry: Introduction to computational chemistry, and docking studies Semiconductors-Introduction, basic concept, Types-Intrinsic & Extrinsic Semiconductors, applications. Nano materials: Introduction, classification of nano materials, engineering applications, properties and applications of Carbon nano tubes and Graphenes nanoparticles. Liquid crystals: Introduction, liquid crystalline displays (LCD)-applications. Polymers for light emitting diodes (LEDs)-Introduction, classification of polymer LEDs, Organic LEDs-their commercial uses.

BASIC ELECTRICAL AND ELECTRONICS ENGINEERING														
I B. Tech. – II Semester (Code: 24CS203)														
Lectures	3	Tutorial	0	Practical	0	Credits	3							
Continuous Internal Evaluation			40	Semester End Examination				60						
Pre-Requisite: Basics of Mathematics, Physics and Chemistry														
Course Objectives:														
➤ Develop a comprehensive understanding of basic electrical circuit principles, including the analysis of DC and AC circuits using laws and theorems. ➤ Analyze the construction, working principles, and applications of various electrical machines like DC machines, transformers, and AC machines. ➤ Comprehend the fundamental properties and applications of semiconductor materials and devices, focusing on diodes and their practical uses. ➤ Acquire proficiency in the operation and applications of transistors and operational amplifiers in electronic circuits, including their use in amplification and switching.														
Course Outcomes: At the end of this course, Students will be able to														
CO1	Solve and analyze basic DC and AC electrical circuits using fundamental laws and theorems.								BL4					
CO2	Explain the construction, operation, and applications of different types of electrical machines.								BL2					
CO3	Acquire an understanding of semiconductor materials and devices and their practical applications in electronic circuits.								BL2					
CO4	Illustrate and analyze basic electronic circuits involving transistors (BJTs and MOSFETs) and operational amplifiers.								BL4					
Mapping of Course Outcomes with Program Outcomes & Program Specific Outcomes														
	POs											PSOs		
CO	1	2	3	4	5	6	7	8	9	10	11	1	2	3
CO1	3	3	3	2	-	-	-	-	-	-	2	3	-	-
CO2	3	3	2	2	-	-	-	-	-	-	2	3	-	-
CO3	3	3	2	1	-	-	-	-	-	-	2	3	-	-
CO4	3	3	3	1	-	-	-	-	-	-	2	3	-	-
UNIT-I													12 hours	
Basic Definitions: Electric charge, Current, Voltage, Power, and Energy, Ohm's Law														
DC Circuits: Series and Parallel Circuits their Characteristics and analysis, Kirchhoff's Voltage Law (KVL) and Kirchhoff's Current Law (KCL), Simple problems on circuit analysis. Thevenin's, Norton's and Superposition theorem.														
AC Fundamentals: Alternating Current (AC) and Voltage, Peak, RMS, and Average values of AC, form and peak factors, Phasors and phase relationships in AC circuits. AC excitation to R, L, C and their combination (series and parallel), Impedance and Power triangle.														

3-Phase circuits: Star and Delta connections, relation between line and phase values of currents and voltages with derivations.	
UNIT-II	12 hours
DC Machines: Construction and working of DC generator and its emf equation. Types of DC generators. Open circuit characteristic of DC shunt generator. Construction and working of DC motor and its torque equation, load test on DC shunt motor. Applications of DC machines. Transformers (AC non-rotating): Construction and working of Transformer, Types of transformers, Transformer emf equation, losses and efficiency, Regulation, load test on transformer, Applications. AC Machines (AC rotating): Induction Motors: Construction and working of single-phase induction motor. Capacitors start single phase induction motor. Synchronous Machines: Construction and working of Alternator, Construction and working of Synchronous motor and their applications.	
UNIT-III	12 hours
Diodes and Applications: Difference between Conductors, Insulators, and Semiconductors- Intrinsic and Extrinsic Semiconductors-N-type and P-type semiconductors. PN Junction Diode: Construction, working, and VI characteristics. Zener Diode: Construction, working, and VI characteristics, Its application as voltage regulator. Rectifiers: Half-wave and Full-wave rectifiers, working principles, and efficiency	
UNIT-IV	12 hours
Transistors: Bipolar Junction Transistor (BJT): Construction, operation, and characteristics in Common Emitter, Common Base, and Common Collector configurations. MOSFET Construction, working principle, characteristics, and applications as amplifier and as switch. Operational Amplifiers (Op-Amps): Characteristics and parameters, Inverting and Non-inverting Amplifiers, Summing amplifier, Difference amplifier, Integrator, Differentiator with their Circuit diagrams, formulas, and applications.

PROGRAMMING FOR PROBLEM SOLVING														
I B. Tech. – II Semester (Code: 24CS204)														
Lectures	3	Tutorial	0	Practical	0	Credits	3							
Continuous Internal Evaluation				40	Semester End Examination						60			
Pre-Requisite: Introduction to Programming (24CS104)														
Course Objectives:														
➤ Understand and apply pointers in C for memory management and manipulation, including arrays, strings, functions, and structures. ➤ Learn file handling, dynamic memory allocation, and object-oriented programming concepts, including classes, inheritance, and polymorphism. ➤ Learn to define and use classes and objects, including access control, member functions, and overloading in C++. ➤ Implement operator overloading and various forms of inheritance in C++.														
Course Outcomes: At the end of this course, Students will be able to														
CO1	Effectively use pointers for advanced data handling, perform pointer arithmetic, and manipulate structures and unions in C.											BL3		
CO2	Manage files, allocate memory dynamically, and apply object-oriented principles like inheritance and polymorphism in programming.											BL3		
CO3	Create and manage classes and objects, implement constructors and destructors, and use function overloading and inline functions effectively.											BL6		
CO4	Overload operators and use different inheritance types, including abstract, multilevel, multiple, hierarchical, and hybrid inheritance.											BL3		
Mapping of Course Outcomes with Program Outcomes & Program Specific Outcomes

CO4	2	1	1	2	-	1	-	-	-	-	-	-	2	1
UNIT-I														
													12 hours	
Pointers: Introduction, Definition and Uses of Pointers, Address Operator &, Pointer Variables, Dereferencing Pointers, void Pointers, Pointer Arithmetic, Pointers to Pointers, Pointers and Arrays, Passing Arrays to Functions, Pointers and Functions, Accessing Arrays Inside Functions, Pointers and Two-dimensional Arrays, Array of Pointers, Pointer Constants, Pointers and Strings, Pointers in Standard String Library Functions, Two-dimensional Array of Characters, Array of Pointers to Strings, More String Library functions, Pointers to Functions. Structures and Unions: Introduction, Declaring and Using Structures, Structure Initialization, Structure within Structure, Operations on Structures, Array of Structures, Array within Structure, Creating User Defined Data Types, Pointers to Structures, Pointers within Structures,														

Structures and Functions, Unions, Differences between Structures and Unions, Operations on A union, Scope of A union, Bit Fields in Structures.	
UNIT-II	12 hours
Files: Introduction, End of File, File-handling Functions, File Types, Unbuffered and Buffered Files, Error Handling. Dynamic Memory Allocation: Introduction, Library Functions for Dynamic Memory Allocation. Object-Oriented Paradigm: Why new Programming Paradigms?, Evolution of Programming Paradigms, Objects, Classes, Inheritance, Polymorphism, Streams based I/O, Scope Resolution Operator, Variable Definition at the Point of Use, Type Conversion.	
UNIT-III	12 hours
Classes and Objects: Introduction, Class Specification, Class Objects, Accessing Class Members, Defining Member Functions, Outside member functions as inline, Accessing member functions within the Class, Data hiding, Passing objects as arguments, Returning objects from functions, Friend functions and Friend classes, Static data and member functions, Constructors, Destructors. Overloading: Introduction, Parameters Passing by Reference, Inline Functions, Function Overloading.	
UNIT-IV	12 hours
Operator Overloading: Introduction, Overloadable Operators, Unary Operator Overloading, operator Keyword, Operator return values, Binary Operator Overloading, Arithmetic Operator Overloading, Concatenation of strings, Comparison Operators, Arithmetic Assignment Operators, Overloading with friend functions, Assignment operator Overloading. Inheritance: Introduction, Derived class declaration, forms of inheritance, inheritance and member accessibility, Constructors in derived classes, Destructors in derived classes, abstract classes, multilevel inheritance, multiple inheritance, hierarchical inheritance, hybrid inheritance, object composition-delegation.

DISCRETE MATHEMATICS														
I B. Tech. – II Semester (Code: 24CS205)														
Lectures	3	Tutorial	0	Practical	0	Credits	3							
Continuous Internal Evaluation			40	Semester End Examination			60							
Pre-Requisite: None.														
Course Objectives:														
➤ Understand operations on discrete structures such as sets, functions, and relations. Formulate short proofs using methods of proof of an implication. Verify the correctness of an argument using propositional logic and truth tables. Construct mathematical arguments using logical connectives and quantifiers. ➤ Verify the correctness of an argument using rules of inference for quantified propositions. Apply algorithms and use definitions to solve problems to prove statements in elementary number theory. Understand counting and indirect counting techniques and combinatory in the context of discrete probability. ➤ Understand sequences, generating functions, and recurrence relations. ➤ Understand and compute coefficients for generating functions. Understand and solve homogeneous recurrence relations. ➤ Understand and solve Inhomogeneous recurrence relations. ➤ Understand the properties of binary relations, partial orderings and lattices. Construct graphs and adjacency matrices for binary relations.														
Course Outcomes: At the end of this course, Students will be able to														
CO1	Understand the basic principles of sets, relations, functions and inference rules for validating arguments.						BL2							
CO2	Prove that the given statement is valid by using mathematical induction and utilize a variety of counting strategies to solve computational problems.						BL3							
CO3	Discuss different methods for solving different types of recurrence relations.						BL2							
CO4	Understand various operations and representations of a binary relation.						BL2							
Mapping of Course Outcomes with Program Outcomes & Program Specific Outcomes

Rules of Inference for Quantified propositions, Mathematical Induction. Elementary Combinatorics: Basics of Counting, Combinations and Permutations, Enumeration of Combinations and Permutations, Enumerating Combinations and Permutations with repetitions, Enumerating Permutation with Constrained repetitions.	
UNIT-III	12 hours
Recurrence relations: Generating functions of sequences, Calculating Coefficients of Generating Functions Recurrence Relations: Solving recurrence relations by Substitution and generating functions, The methods of characteristic roots.	
UNIT-IV	12 hours
Recurrence Relations: solutions of Inhomogeneous recurrence relations. Relations: Special properties of binary relations, Operations on relation. Ordering relations, Lattice, Paths and Closures, Directed Graphs and Adjacency Matrices.

ENGINEERING MECHANICS AND SURVEYING LAB															
I B.Tech – II Semester (Code: 24CSL201)															
Lectures	1	Tutorial		0	Practical		2	Credits				2			
Continuous Internal Evaluation				40		Semester End Examination						60			
Pre-Requisite: Basics of Mathematics & Physics															
Course Objectives:															
➤ Equip students with the fundamental principles and techniques necessary to solve problems related to forces and supports in engineering mechanics. ➤ Provide students with a thorough understanding of frictional forces and their applications in engineering mechanics. ➤ Provide students with the essential skills and knowledge to analyze truss structures. ➤ Provide students with a deep understanding of rotational dynamics and the principles governing the motion of rigid bodies. ➤ Provide students with the fundamental skills and techniques required for various surveying methods in civil engineering.															
Course Outcomes: At the end of this course, Students will be able to															
CO1	Utilize the Parallelogram Law, Triangle Law, and Polygon Law to determine the resultant of concurrent forces. Apply Varignon’s Principle to find the magnitude and position of the resultant force in a system. Calculate support reactions for beams subjected to transverse loads using principles of equilibrium. Calculate the geometric center (centroid) of various lamina shapes through integration and composite area methods.												BL3		
CO2	Determine the coefficient of static friction between a block and a rough surface under horizontal force. Calculate the angle of inclination at which a block just starts to slide down an inclined plane. Determine the axial forces in truss members using the method of joints.												BL3		
CO3	Experimentally determine and verify the angular acceleration of a rolling disc on an inclined plane. Calculate the moment of inertia of a flywheel through experimental procedures.												BL4		
CO4	Perform a cross-staff survey to determine the area of a plot. Determine the elevation difference between two points and the height of the ceiling of a building using leveling techniques. Determine the horizontal distance between inaccessible points and the height of an object using a theodolite.												BL3		
Mapping of Course Outcomes with Program Outcomes & Program Specific Outcomes															
	POs											PSOs

CO3	3	3	-	2	-	-	-	-	1	-	2	3	3	3	3
CO4	3	3	-	2	-	-	-	-	1	-	2	3	3	3	3

LIST OF EXPERIMENTS	48 hours
FORCE SYSTEM Force – characteristics of force – system of forces – moment of a force - laws of forces – supports and their reactions, Centroid – determination of centroid for plane figures. (2) List of experiments 1. Determination of the magnitude of the resultant force using a) Parallelogram law and b) Triangle law c) Polygon law 2. Determination of the magnitude of the resultant force using Varignon's principle. 3. Determination of the support reactions for a beam subjected to transverse loads. 4. Determination of the geometric center of different lamina. FRICTION Friction – laws of friction – coefficient of friction – angle of repose. (2) List of experiments 5. Determination of the coefficient of static friction between the block and rough surface when the block is subjected to horizontal force. 6. Determination of the angle of inclination at which a block just starts to slide down an inclined plane. ANALYSIS OF TRUSS Truss – Method of analysis. (2) List of experiments 7. Determination of the axial forces in the truss members. MASS MOMENT OF INERTIA & ROTATION OF A RIGID BODY ABOUT A FIXED AXIS Area moment of inertia – mass moment of inertia – Relation between mass and area moment of inertia, Kinematics of rotation – Equation of motion for a rigid body rotating about a fixed axis – D'Alembert's principle. (3) List of experiments 8. Verification of angular acceleration of a rolling disc on an inclined plane. 9. Determination of the moment of inertia of flywheel. SURVEYING Surveying – principles of surveying – chain surveying – theodolite surveying – leveling. (5) List of experiments 10. Determination of the area of a plot using cross - staff survey. 11. Determination of the elevation difference between two points using leveling and height of ceiling of a building. 12. Determination of the horizontal distance between inaccessible points using theodolite. 13. Determination of the height of an object using theodolite.

ENGINEERING CHEMISTRY LAB														
I B.Tech – II Semester (Code: 24CSL202)														
Lectures	0	Tutorial	0	Practical	2	Credits	1							
Continuous Internal Evaluation			40	Semester End Examination				60						
Pre-Requisite: None.														
Course Objectives:														
➤ Familiarize students with practical chemical analysis techniques for determining key water quality parameters. ➤ Provide hands-on experience in performing volumetric and instrumental titrations to understand their chemical principles and applications. ➤ Develop proficiency in using laboratory equipment, following safety protocols, and accurately conducting experiments. ➤ Teach students the synthesis of common organic compounds and their characterization techniques.														
Course Outcomes: At the end of this course, Students will be able to														
CO1	Determine water quality parameters such as alkalinity and hardness.								BL3					
CO2	Conduct volumetric titrations to estimate the concentration of chemical substances.								BL3					
CO3	Apply instrumental methods such as pH metry and conductometry for titration experiments and colorimetry for verification of Beers law.								BL3					
CO4	Synthesize and characterize common organic compounds like soap, resins, and aspirin.								BL6					
Mapping of Course Outcomes with Program Outcomes & Program Specific Outcomes

CO4	2	-	-	3	-	2	-	-	-	-	-	-	-	-
LIST OF EXPERIMENTS										32 hours				
1. Determination of Alkalinity of Tap water.														
2. Determination of Total Hardness of ground water sample by EDTA method														
3. Estimation of Mohr’s salt by Permanganometry.														
4. Estimation of Active Chlorine Content in Bleaching Powder														
5. pH metric titration between strong acid and strong base.														
6. Conductometric Titrations between Strong acid and strong base.														
7. Verification of Beers Law using potassium permanganate by colorimetry.														
8. Preparation of Soap.														
9. Preparation of Urea-formaldehyde resin

I B.Tech – II Semester (Code: 24CSL203)														
Lectures	0	Tutorial	0	Practical	3	Credits	1.5							
Continuous Internal Evaluation				40	Semester End Examination							60		
Pre-Requisite: None.														
Course Objectives:														
➤ Enable students to verify and apply basic electrical laws and theorems ➤ Equip students with practical skills to conduct experiments on electrical machines ➤ Provide students with hands-on experience in analyzing the V-I characteristics of semiconductor devices and their applications ➤ Develop students' abilities to analyze and characterize the operations transistor, MOSFET and Op-Amps.														
Course Outcomes: At the end of this course, Students will be able to														
CO1	Verify and apply basic network theorems through practical experimentation, thereby gaining a deep understanding of circuit analysis techniques.												BL3	
CO2	Demonstrate the ability to perform experiments on electrical machines and interpret their operational characteristics and performance metrics.												BL4	
CO3	Analyze the V-I characteristics of diodes and understand their roles in rectifier circuits and enhancing their understanding of semiconductor behavior in practical applications.												BL4	
CO4	Characterize the performance of BJTs, MOSFETs and designing and analyzing operational amplifier circuits to prepare them for advanced electronic circuit design.												BL4

CO3	2	2	1	-	-	-	-	-	-	-	-	-	2	2
CO4	2	1	2	-	-	-	-	-	-	-	-	-	2	1
LIST OF EXPERIMENTS														
													48 hours	
1. Write C programs for the following using pointers and functions: a) Declare the array of 20 integer numbers. Find and display the average of only even numbers by using pointers. b) Write a program to reverse the string using pointers. c) Calculate the addition of two 4 X 4 matrices using pointers. Take the input from user. 2. A Bookshop maintains the inventory of books that are being sold at the shop. The list includes details such as author, title, price, publisher and stock position. Whenever a customer wants a book the sales person inputs the title and the author, and the system searches the list and displays whether it is available or not. If it is not, an appropriate message is displayed, if it is,														

then the system displays the book details and request for the number of copies required, if the requested copies are available the total cost of the requested copies is displayed otherwise the message “required copies not in stock” is displayed. Write a program for the above in structures with suitable functions.

3. Write a program in C to merge two files and write them to another file.
4. Write a C program to read a data file of students' records with fields (Regno, Name, M1, M2, M3, M4, M5) and write the successful students data (percentage > 40%) to a data file.
5. Write a C++ program with a class to represent a bank account. Include the following members:
Data Members – 1. Name of the depositor 2. Account Number 3. Type of account 4. Balance amount in the account.
Member function – 1. To assign initial values 2. To deposit an amount 3. To withdraw an amount after checking the balance 4. To display name and Balance.
6. Create a class called 'TIME' that has
 - three integer data members for hours, minutes and seconds
 - constructor to initialize the object to zero
 - constructor to initialize the object to some constant value
 - member function to add two TIME objects
 - member function to display time in HH:MM:SS formatWrite a main function to create two TIME objects, add them and display the result in HH:MM:SS format.
7. Write a C++ program to illustrate static member functions.
8. Write a C++ program to implement function overloading in order to compute power(m,n) where i) m is double and n is int ii) m and n are int. Use a default value of 2 for n to make the function to calculate squares when this argument is omitted.
9. Create a 'STRING' class which overloads ‘==’ operator to compare two STRING objects using
a) friend function b) without using friend function.
10. Write a C++ program to overload ‘++’ and ‘--’ operators to convert a string to uppercase and lowercase respectively.
11. Write a C++ program on Composition.
12. Write a C++ program on Inheritance.

PROBABILITY AND STATISTICS														
II B. Tech. – III Semester (Code: 24CS301)														
Lectures	2	Tutorial	1	Practical	0	Credits	3							
Continuous Internal Evaluation			40	Semester End Examination			60							
Pre-Requisite: None														
Course Objectives:														
➤ Employ discrete and continuous probability distributions to analyze and solve real world problems in Engineering fields. ➤ Estimate the point and interval estimators of the mean, variance and proportion for the given Sample data and apply Z-test, t-test to various real-life problems ➤ Apply various sample tests like F-test and χ^2 -test for decision making regarding the population based on sample data. ➤ Compute the level of correlation, the best fit curve to the given data by the method of least squares and also perform ANOVA arising in the field of engineering.														
Course Outcomes: At the end of this course, Students will be able to														
CO1	Apply discrete and continuous probability distributions to various problems arising in Engineering applications.						BL3							
CO2	Perform Test of Hypothesis for a population parameter for single sample.						BL3							
CO3	Perform Test of Hypothesis for population parameters for multiple samples.						BL3							
CO4	Interpret the results of correlation, regression and one way ANOVA for the given data.						BL4

CO4	3	3	3	-	-	-	-	-	-	-	2	-	-	-
UNIT-I														
Descriptive measures, Random variables and Probability distributions: Arithmetic mean, median and mode, Random variables, Binomial distribution, The mean and variance of a probability distribution, Poisson approximation to the Binomial distribution, Continuous Random Variables, Normal Distribution, Normal Approximation to the Binomial Distribution, Uniform Distribution, Weibull distribution. (Sections 2.5, 4.1, 4.2, 4.4, 4.6, 5.1, 5.2, 5.3, 5.5, 5.9.)													12 hours	
UNIT-II														
Sampling distributions and Inferences concerning one mean: Populations and Samples, The sampling distribution of the mean (σ known), The sampling distribution of the mean (σ unknown). The sampling distribution of the variance. Point														

estimation, Interval estimation, Tests of Hypotheses, Null Hypothesis and Tests of hypotheses, Hypothesis concerning one mean. (Sections 6.1, 6.2, 6.3, 6.4, 7.1, 7.2, 7.4, 7.5, 7.6)	
UNIT-III	12 hours
Comparing two treatments and Inferences concerning variances: Comparisons-Two independent large samples, Comparisons-Two independent small samples, matched pairs comparisons, the estimation of variances, Hypotheses concerning one variance, Hypotheses concerning two variances. (Sections 8.2, 8.3, 8.4, 9.1, 9.2, 9.3)	
UNIT-IV	12 hours
Inferences concerning proportions, Regression Analysis and Analysis of variance: Estimation of proportions, Hypotheses concerning one proportion, Hypotheses concerning two proportions, the method of least squares, curvilinear regression, multiple regression, correlation, some general principles, Completely Randomized Designs (One way ANOVA). (10.1, 10.2, 10.3, 11.1, 11.3, 11.4, 11.6, 12.1, 12.2)

DIGITAL LOGIC DESIGN														
II B. Tech. – III Semester (Code: 24CS302)														
Lectures	3	Tutorial	0	Practical	0	Credits	3							
Continuous Internal Evaluation			40	Semester End Examination			60							
Pre-Requisite: Basic Computer Knowledge.														
Course Objectives:														
➤ Apply various simplification methods to simplify the Boolean expressions. ➤ Design and analysis of combinational circuits. ➤ Design and analysis of sequential circuits. ➤ Design various counters, registers and PLD's.														
Course Outcomes: At the end of this course, Students will be able to														
CO1	Understand different number systems, binary codes and conversion between number system. Understand and apply Boolean algebra and K-maps to simplify Boolean functions						BL3							
CO2	Understand and apply tabulation method to simplify the Boolean functions. Understand, analyze and design various combinational circuits.						BL4							
CO3	Know the fundamentals of various flip-flops, analyze and design sequential circuits.						BL4							
CO4	Understand design of various registers and counters. Design of various PLD's for Boolean functions.						BL6							
Mapping of Course Outcomes with Program Outcomes & Program Specific Outcomes														
	POs											PSOs		
CO	1	2	3	4	5	6	7	8	9	10	11	1	2	3
CO1	3	3	3	-	-	-	-	-	-	-	-	3	-	-
CO2	3	3	3	-	-	-	-	-	-	-	-	3	-	-

CO4	3	3	3	-	-	-	-	-	-	-	-	3	-	-
UNIT-I														
DIGITAL SYSTEMS AND BINARY NUMBERS: Digital System, Binary Numbers, Number base Conversions, Octal and Hexadecimal Numbers, Complements of Numbers, Signed Binary Numbers, Binary Codes, Binary Storage and Registers, Binary Logic, Error Detection and Correction: 7 bit Hamming Code.													12 hours	
BOOLEAN ALGEBRA & LOGIC GATES: Introduction, Basic definitions, Axiomatic definition of Boolean algebra, Basic theorems and properties of Boolean algebra, Boolean functions, Canonical and Standard Forms, Other Logic Operations, Digital logic gates.														
GATE –LEVEL MINIMIZATION: Introduction, The map method, Four-variable K-Map, Product-of-Sums Simplification, Don't –Care Conditions.														
UNIT-II													12 hours	
MINIMIZATION: The Tabulation method, Determination of prime implicants, Selection of

Department of Computer Science & Engineering

prime-implicants.	
COMBINATIONAL LOGIC: Introduction, Combinational Circuits, Analysis Procedure, Design Procedure, Binary Adders - Subtractors, Decimal Adder, Magnitude Comparator, Decoders, Encoders, Multiplexers.	
UNIT-III	12 hours
SYNCHRONOUS SEQUENTIAL LOGIC: Introduction, Sequential Circuits, Storage Elements - Latches, Storage Elements -Flip Flops, Analysis of Clocked Sequential Circuits: State Equations, State Table, State Diagram, Flip Flop Input Equations, Analysis with D, JK and T Flip Flops; State reduction and Assignment, Design Procedure.	
UNIT-IV	12 hours
REGISTERS and COUNTERS: Registers, Ripple Counters, Synchronous Counters. MEMORY and PROGRAMMABLE LOGIC: Introduction, Random Access Memory: Read and Write Operations, Types of Memories; Read Only Memory, Programmable Logic Devices: PROM, PLA, PAL.	
Text Books :	1. M. Morris Mano, Michael D. Ciletti, "Digital Design", 5 th Edition, PrenticeHall, 2013. ISBN-10: 0-13-277420-8. 2. A. Anand Kumar, "fundamentals of digital circuits", 4 th Edition, PHI.

DATA STRUCTURES														
II B. Tech. – III Semester (Code: 24CS303)														
Lectures	2	Tutorial	1	Practical	0	Credits	3							
Continuous Internal Evaluation			40	Semester End Examination						60				
Pre-Requisite: Programming for Problem Solving (24CS204)														
Course Objectives:														
➤ Understand the role of Data structures in structuring and analysis procedure of an algorithm. ➤ Learn the concept of Stack, Queue and various Sorting techniques. ➤ Understand the concept of Binary Tree, Binary Search Tree, AVL tree, Heap Data Structures ➤ Learn the concept of Hashing and Graph traversals														
Course Outcomes: At the end of this course, Students will be able to														
CO1	Analyze the concepts of algorithm evolution and compute their time & space complexities. To elaborate various lists along with their operations.												BL4	
CO2	Solve various real time problems using stack and queue data structures. Develop algorithms and programs for various sorting techniques.												BL6	
CO3	Analyze the concepts of trees, binary trees, AVL trees and priority queues.												BL4	
CO4	Analyze various hashing techniques and Graph traversals												BL4	
Mapping of Course Outcomes with Program Outcomes & Program Specific Outcomes

CO4	3	3	3	-	-	-	-	-	-	-	-	3	3	-
UNIT-I														
													12 hours	
Introduction: Algorithm, Importance of Algorithm Analysis, Complexity of an Algorithm, Asymptotic Analysis and Notations. Data Structure, Classification of Data Structures.														
Lists: Abstract Data Types, The List ADT, Singly Linked List ADT, Doubly Linked List ADT, Circular Linked List ADT, Polynomial ADT: addition, multiplication operations.														
UNIT-II														
													12 hours	
Stacks and Queues: The Stack ADT and its applications such as Infix to Postfix expression conversions, Evaluation of Postfix expressions. The Queue ADT, Queue Application-Radix sort.														
Basic Sorting Techniques: Bubble sort, Selection sort, Insertion sort, Shell sort														
UNIT-III														
													12 hours	
Trees: Preliminaries, Binary Trees, The Search Tree ADT, Binary Search Trees, Implementations, AVL Trees-Single Rotations, Double rotations, Implementations.														
Priority Queues (Heaps): Model, Simple implementations, Binary Heap, Heap Sort.														

Bapatla Engineering College: Bapatla -522102 (Autonomous)

OBJECT ORIENTED PROGRAMMING														
II B. Tech. – III Semester (Code: 24CS304)														
Lectures	2	Tutorial	1	Practical	0	Credits	3							
Continuous Internal Evaluation			40	Semester End Examination				60						
Pre-Requisite: Introduction to Programming (24CS104), Programming for Problem Solving(24CS204)														
Course Objectives:														
➤ Understand the advantages of Object Oriented Programming over Procedural-Oriented Programming, learn the basics of variables, operators, control statements, arrays, classes and objects. ➤ Understand, write and implement the following concepts: Inheritance, Exception Handling, Interfaces, Packages and Strings and StringBuffer. ➤ Understand and write programs on Collections, Multithreading and I/O. ➤ Understand and implement applications using JFX.														
Course Outcomes: At the end of this course, Students will be able to														
CO1	Demonstrate OOP concepts, its advantages over structured programming.								BL2					
CO2	Develop and implement Inheritance, Exception Handling, Interfaces, Packages and Strings and StringBuffer.								BL6					
CO3	Analyze Collections, Multithreading and I/O.								BL4					
CO4	Create code using JavaFX.								BL6					
Mapping of Course Outcomes with Program Outcomes & Program Specific Outcomes

CO4	3	2	3	-	2	-	-	-	-	-	-	3	3	2
UNIT-I										12 hours				
An Introduction to Java: History, Java Byte Code, Java Buzzwords Data Types, Variables and Arrays Operators Control Statements Introducing Classes A Closer Look at Methods and Classes														
UNIT-II										12 hours				
Inheritance Exception Handling Packages and Interfaces Strings: String Constructors, Any 10 String class methods, StringBuffer class, Any 10 StringBuffer class methods.														

Bapatla Engineering College: Bapatla -522102 (Autonomous)

Approved by AICTE :: Affiliated to ACHARYA NAGARJUNA UNIVERSITY

Department of Computer Science & Engineering

UNIT-III		12 hours
Type Wrappers, Autoboxing/Unboxing		
Collections: Collections Overview, Names of Collection Interfaces, Collection Classes: LinkedList, Array List		
Multithreaded Programming: Introduction, Life Cycle, Thread creation – Thread Class, Runnable Interface, Thread Priority, Synchronization, Interthread Communication.		
I/O: I/O Basics, Reading Console Input, Writing Console Output, The Print Writer class, Reading and Writing Files, Automatically Closing a File.		
UNIT-IV		12 hours
Introducing JavaFX GUI Programming: JavaFX Basic Concepts, A JavaFX Application Skeleton, Compiling and Running a JavaFX Program, The Application Thread, A Simple JavaFX Control: Label, Using Buttons and Events, Drawing Directly on a Canvas.		
Exploring JavaFX Controls: Using Image and ImageView, ToggleButton, RadioButton, CheckBox, ListView, ComboBox, TextField, ScrollPane, TreeView.		
Introducing JavaFX Menus: Menu Basics, An Overview of MenuBar, Menu, and MenuItem, MenuBar, Menu, MenuItem, Create a Main Menu, Add Mnemonics and Accelerators to Menu Items, Add Images to Menu Items, Use RadioMenuItem and CheckMenuItem, Create a Context Menu, Create a Toolbar, Put the Entire MenuDemo Program Together, Continuing Your Exploration of JavaFX

COMPUTER NETWORKS														
II B.Tech – III Semester (Code: 24CS305)														
Lectures	3	Tutorial	0	Practical	0	Credits	3							
Continuous Internal Evaluation			40	Semester End Examination			60							
Pre-Requisite: None														
Course Objectives:														
➤ Understand the basic concepts of data communication, layered model, protocols and OSI & TCP layers ➤ Understand the basic concepts of Data Link control, Network Layer Design Issues, Routing Algorithms & Congestion. ➤ Understand the basic concepts of Quality of service, Network Layer & Transport Layer ➤ Understand the basic concepts of TCP, UDP & Application Layer														
Course Outcomes: At the end of this course, Students will be able to														
CO1	Learn types of communications, topologies, OSI, TCP/IP protocol architectures along with error detection and correction mechanisms and also the working of data link layer						BL2							
CO2	Understand and analyze data link control mechanisms, network layer design, routing algorithms, and congestion control techniques to ensure efficient and reliable network communication.						BL4							
CO3	Know the transport layer issues, establishment of remote procedure calls and TCP segment header.						BL2							
CO4	Learn the working of TCP and UDP and different application layer issues.						BL2							
Mapping of Course Outcomes with Program Outcomes & Program Specific Outcomes

Network Layer: Network Layer Design Issues: Store-and-Forward Packet Switching, Services Provided to the Transport Layer, Implementation of Connectionless Service, Implementation of Connection-Oriented Service, Comparison of Virtual-Circuit & Datagram Subnets. Routing Algorithms: The Optimality Principle, Shortest Path Routing, Flooding, Distance Vector Routing, Link State Routing, Hierarchical Routing. Congestion Control Algorithms: General Principles of Congestion Control, Congestion Prevention Policies, Congestion Control in Virtual-Circuit Subnets, Congestion Control in Datagram Subnets, Load Shedding, Jitter Control.	
UNIT-III	12 hours
Quality of Service: Requirements, Techniques for Achieving Good Quality of Service. The Network Layer in the Internet: The IP Protocol, IP Addresses, Internet Control Protocols. The Transport Layer, The Transport Service: Services Provided to the Upper Layers, Transport Service Primitives. Elements of Transport Protocols: Addressing, Connection Establishment, Connection Release.	
UNIT-IV	12 hours
The Internet Transport Protocol (UDP): Introduction to UDP, Remote Procedure Call, The Real-Time Transport Protocol. The Internet Transport Protocols (TCP): Introduction to TCP, The TCP Service Model, The TCP Protocol, The TCP Segment Header, TCP Connection Establishment, TCP Connection Release, Modeling TCP Connection Management, TCP Transmission Policy, TCP Congestion Control, TCP Timer Management. Application Layer: The Domain Name System (DNS): The DNS Name Space, Resource Records, Name Servers.

PYTHON PROGRAMMING (Skill Enhancement Course - I) II B. Tech. – III Semester (Code: 24CSL301/SEC1)														
Lectures	1	Tutorial	0	Practical	2	Credits	2							
Continuous Internal Evaluation			40	Semester End Examination			60							
Pre-Requisite: None														
Course Objectives:														
➤ Understand and write code using the basics of Python, Statements, Expressions, Conditional Executions, and Functions. ➤ Write code for Iteration, Strings, File I/O. ➤ Write code in creating, usage of Lists, Dictionaries, and Tuples. ➤ Understand the concepts of Object Orientation, Databases and write code implementing them.														
Course Outcomes: At the end of this course, Students will be able to														
CO1	Identify the basic python constructs with a view of using them in problem solving.						BL3							
CO2	Explore the usability of functions and strings in modular programming						BL2							
CO3	Apply lists, dictionaries, tuples and file operations to organize the data in real world problems.						BL3							
CO4	Implement the problems in terms of real world objects using object oriented and database concepts.						BL3							
Mapping of Course Outcomes with Program Outcomes & Program Specific Outcomes

CO4	3	3	3	-	-	-	2	-	2	-	3	3	3	3
Topic 16 hours														
Python: Introduction, Basic elements, Control structures. Functions: function calls, built-in functions, type conversion functions, random numbers, math functions, adding new functions, definitions and uses, flow of execution, parameters and arguments, fruitful functions and void functions. Strings: string is a sequence, getting the length of a string using len, traversal through a string with a loop, string slices, strings are immutable, looping and counting, the in operator, string comparison, string methods, parsing strings, format operator. Lists: a list is a sequence, lists are mutable, traversing, operations, slices, methods, deleting elements, functions, strings, parsing lines, objects and values, aliasing, arguments. Dictionaries: dictionary as a set of counters, dictionaries and files, looping and dictionaries, advanced text parsing.														

Tuples: tuples are immutable, comparing tuples, tuple assignment, dictionaries and tuples, multiple assignment with dictionaries, the most common words, using tuples as keys in dictionaries, sequences.

Functional Programming: Join function, comprehension (list and dict), lambda, reduce, filter and map function.

Object-Oriented Programming: Classes and Objects, Classes and Functions, Classes and Methods, Inheritance

Files I/O: persistence, opening files, text files and lines, reading files, searching through a file, letting the user choose the file name, using try except and open, writing files.

LIST OF EXPERIMENTS	32 hours
---------------------	----------

Basic elements, Control structures:

1. Write a Python program to input two numbers and display their sum, difference, product, and quotient of division. (Covers variables, expressions, operators, input/output).
2. Write a Python program to check if a number is positive, negative, or zero. (Covers if, elif, else).
3. Write a Python program to find the largest of three numbers using nested if. (Covers nested conditionals).
4. Write a Python program to print the Fibonacci sequence up to n terms using a loop. (Covers loops, updating variables).
5. Write a Python program to find the factorial of a number using a while loop. (Covers while loop and loop control).

Functions:

6. Write a Python program to define a function that checks whether a number is prime. (Covers user-defined functions, return values).
7. Write a Python program using built-in functions like len(), type(), int() and random.randint() to demonstrate their usage. (Covers built-in and standard library functions).

Strings:

8. Write a Python program to count the number of vowels, consonants, digits, and special characters in a string. (Covers string traversal, conditions, in operator).
9. Write a Python program to extract the domain name from an email address. (Covers slicing, find(), string methods)

Lists:

10. Write a Python program to remove duplicates from a list and sort it. (Covers list methods and operations).
11. Write a Python program to split a list every Nth element.
Sample Input: list1 = ['a', 'b', 'c', 'd', 'e', 'f', 'g', 'h', 'i', 'j', 'k', 'l', 'm', 'n']
Expected Output: output_list = [['a', 'd', 'g', 'j', 'm'], ['b', 'e', 'h', 'k', 'n'], ['c', 'f', 'i', 'l']]
12. Write a Python program to compute the similarity between two lists.
Sample Input: Colors1 = ["red", "orange", "green", "blue", "white"]
Colors2 = ["black", "yellow", "green", "blue"]
Expected Output: Colors1-Colors2 = ['white', 'orange', 'red']

Colors2-Colors1 = ['black', 'yellow']

13. Write a Python program to find the second largest number in a list. (Covers list traversal and conditions).

Dictionaries:

14. Write a Python program to count the frequency of each word in a user-provided string using a dictionary. (Covers dictionary creation and looping).
15. Write a Python program to combine two dictionaries by adding values for common keys.

Sample Input: dict1 = {'a': 100, 'b': 200, 'c': 300}

dict2 = {'a': 300, 'b': 200, 'd': 400}

Sample output: Combined_dict = {'a': 400, 'b': 400, 'd': 400, 'c': 300}

Tuples:

16. Write a Python program to replace last value of tuples in a list.
Sample Input: list1 = [(10, 20, 40), (40, 50, 60), (70, 80, 90)]
Expected Output: new_list = [(10, 20, 100), (40, 50, 100), (70, 80, 100)]
17. Write a Python program to sort a list of tuples based on the second element. (Covers tuples and sort).

Functional Programming:

18. Write a Python program to join the list elements using join function.
Sample Input: ['Department', 'of', 'Computer', 'Science', 'and', 'Engineering']
Expected Output1: DepartmentofComputerScienceandEngineering
Expected Output2: Department of Computer Science and Engineering
Expected Output3: Department-of-Computer-Science-and-Engineering
Expected Output4: Department@-of@-Computer@-Science@-and@-Engineering
Expected Output5: Department+of+Computer+Science+and+Engineering
19. Write a Python single line script to create a list of squares of even numbers in a range of numbers using comprehension.
Sample Input: [1, 2, 3, 4, 5, 6]
Expected Output: [4, 16, 36]
20. Write a Python Program to create a lambda function to add two numbers.
21. Write a Python single line script to filter odd numbers from a list using lambda and filter functions.
Sample Input: [1, 2, 3, 4, 5, 6]
Expected Output: [1, 3, 5]
22. Write a python single line script to convert a list of numbers to strings and join them with any special character.
Sample Input: [1, 2, 3, 4, 5, 6]
Expected Output1: 1+2+3+4+5+6
Expected Output2: "1" "2" "3" "4" "5" "6"
Expected Output3: 123456
Expected Output4: 1-2-3-4-5-6

Expected Output5: $1^2 \cdot 3^4 \cdot 5^6$

23. Write a Python single line script to double the list values using map and anonymous function.

Sample Input: [1, 2, 3, 4, 5, 6]

Expected Output: [2, 4, 6, 8, 10, 12]

24. Write a Python single line program to get the transpose of a 2D matrix using nested list comprehension.

Sample Input: matrix = [[1, 2, 3],
[4, 5, 6]]

Expected Output: [[1, 4], [2, 5], [3, 6]]

25. Write a Python single line program to sort a dictionary by values using lambda function.

Sample Input: {'S1': 88, 'Stu2': 72, 'Stu3': 91, 'S4': 90, 'S5': 79}

Expected Output: {'Stu2': 72, 'S5': 79, 'S1': 88, 'S4': 90, 'Stu3': 91}

26. Write a Python single line script to assign grades based on marks using conditional logic in list. Where student_grade = 'A' if student_marks >= 90, student_grade = 'B' if student_marks >= 75, student_grade = 'C' if student_marks >= 50, else student_grade = 'F'.

Sample Input: student_marks = [95, 67, 80, 45, 76]

Sample Output: student_grades = ['A', 'C', 'B', 'F', 'B']

27. Write a Python single line script to join dictionary keys into a single special character separated string using join function.

Sample Input: {'name': 'John', 'age': 20, 'grade': 'A'}

Sample Output: name, age, grade

28. Write a Python single line script to sort a list of tuples using lambda on the second element of the tuple.

Sample Input: [('apple', 3), ('banana', 1), ('cherry', 2)]

Sample Output: Sorted Tuples: [('banana', 1), ('cherry', 2), ('apple', 3)]

29. Write a Python program to filter prime numbers using a helper function (like: is_prime) and filter with lambda.

30. Write a Python single line script to flatten a nested list of two dimension into a single dimension list using list comprehension.

Sample Input: nested_list = [[1, 2], [3, 4], [5, 6], [7], [8, 9, 10]]

Sample Output: flat_list = [1, 2, 3, 4, 5, 6, 7, 8, 9, 10]

31. Write a python single line script for the following using map() function

- a. Given a list of numbers, return the list of squares

Sample Input: numbers = [1, 2, 3, 4, 5]

Sample Output: squares = [1, 4, 9, 16, 25]

- b. Convert a list of string numbers to actual integers

Sample Input: string_numbers = ['1', '2', '3', '4', '5']

Sample Output: numeric_numbers = [1, 2, 3, 4, 5]

- c. Convert Celsius to Fahrenheit (Formula $F = (C * 9/5) + 32$)
Sample Input: Celsius = [0, 20, 37, 100]
Sample Output: Fahrenheit = [32.0, 68.0, 98.6, 212.0]
- d. Add two lists element-wise
Sample Input: list1 = [1, 2, 3, 4, 5, 6], list2 = [6, 7, 8, 1, 2, 9]
Sample Output: combined_list = [7, 9, 11, 5, 7, 15]
- e. Capitalize list of Names
Sample Input: names = ['computer', 'science', 'and', 'engineering']
Sample Output: capitalized_names = ['Computer', 'Science', 'And', 'Engineering']
- f. Extract first letter of each word
Sample Input: words = ['apple', 'banana', 'cherry']
Sample Output: words_first_letters = ['a', 'b', 'c']
- g. Define a custom function that return the factorial of a number and use map() to apply it to a list of numbers.
Sample Input: numbers = [3, 4, 5]
Sample Output: numbers_factorial = [6, 24, 120]

Object-Oriented Programming:

- 32. Write a Python program to define a class Student with attributes name and marks, and a method to display them. (Covers class, object, methods).
- 33. Write a Python program to demonstrate inheritance with classes Person and Employee. (Covers inheritance and method overriding).

Files I/O:

- 34. Write a Python program to read a text file and count the number of lines, words, and characters. (Covers file reading and parsing)
- 35. Write a Python program to write a list of strings into a text file. (Covers file writing).
- 36. Write a Python program to find the longest word in each line of given file.

DATA STRUCTURES LAB														
II B. Tech. – III Semester (Code: 24CSL302)														
Lectures	0	Tutorial	0	Practical	3	Credits	1.5							
Continuous Internal Evaluation			40	Semester End Examination					60					
Pre-Requisite: Programming for Problem Solving Lab (24CSL204)														
Course Objectives:														
➤ Understand and program basic data structures like arrays and linked lists with their applications. ➤ Understand and Program data structures like stacks and queues with their applications. ➤ Understand and implement sorting algorithms. ➤ Understand and program on trees, binary trees, binary search trees, AVL trees, expression trees and their traversal methods and priority queues ➤ Basic knowledge of graphs representations and traversing methods. Understand the concept of hashing and their mechanisms.														
Course Outcomes: At the end of this course, Students will be able to														
CO1	Apply programming techniques using pointers, DMA and structures to implement SLL and DLL.											BL3		
CO2	Design and implement ADTs of stack, queue and its applications and implement different sorting techniques.											BL6		
CO3	Analyze and implement BST, AVL tree and priority queue.											BL4		
CO4	Analyze and implement graph traversals (DFS and BFS)											BL4		
Mapping of Course Outcomes with Program Outcomes & Program Specific Outcomes														
	POs											PSOs		
CO	1	2	3	4	5	6	7	8	9	10	11	1	2	3
CO1	3	3	3	-	3	-	2	-	2	-	3	3	3	3
CO2	3	3	3	-	3	-	2	-	2	-	3	3	3	3
CO3	3	3	3	-	3	-	2	-	2	-	3	3	3	3
CO4	3	3	3	-	3	-	2	-	2	-	3	3	3	3
LIST OF EXPERIMENTS													48 hours	
1. Write a program to perform the following operations on an ArrayList. a). Creation, b). Insertion, c). Deletion, d). Search, e). Display														
2. Write a program to perform the following operations on a Singly Linked List. a). Creation, b). Insertion, c). Deletion, d). Search, e). Display														
3. Write a program to perform the following operations on a Circular Single Linked List. a). Creation, b). Insertion, c). Deletion, d). Search, e). Display														
4. Write a program to perform addition and multiplication of two polynomials using a Single Linked List.														
5. Write a program to implement stack operations using a linked list.														
6. Write a program to convert a given infix expression to postfix notation and then evaluate the resulting postfix expression using a stack.														

7. Write a program to implement queue operations using a linked list.
8. Write a program that performs Radix sort on a given set of elements using a queue.
9. Write a program to sort the array elements using the following techniques.
 - a). Bubble Sort, b). Selection Sort, c). Insertion Sort, d). Shell Sort.
10. Write a program to perform Binary Search tree operations.
 - a). Creation, b). Insertion, c). Deletion, d). Search, e). Traversals
11. Write a program to implement an AVL tree that interactively allows
 - a). Insertion, b). Find_min, c). Find_max.
12. Write a program to sort the array elements using Heap Sort.
13. Write a program to perform the following hashing techniques.
 - a). Linear Probing b). Quadratic Probing.
14. Write a program to implement the following graph traversal methods.
 - a). DFS b). BFS.

OBJECT ORIENTED PROGRAMMING LAB														
II B.Tech – III Semester (Code: 20CSL303)														
Lectures	0	Tutorial	0	Practical	3	Credits	1.5							
Continuous Internal Evaluation				40	Semester End Examination					60				
Pre-Requisite: Introduction to Programming (24CSL104), Programming for Problem Solving(24CSL204)														
Course Objectives:														
➤ Understand the advantages of Object Oriented Programming over Procedural-Oriented Programming, learn the basics of variables, operators, control statements, arrays, classes and objects. ➤ Understand, write and implement the following concepts: Inheritance, Exception Handling, Interfaces, Packages and Strings and StringBuffer. ➤ Understand and write programs on Collections, Multithreading and I/O. ➤ Understand and implement applications using Events and JFX.														
Course Outcomes: At the end of this course, Students will be able to														
CO1	Demonstrate OOP concepts, its advantages over structured programming.											BL2		
CO2	Develop and implement Inheritance, polymorphism.											BL6		
CO3	Analyze Exception Handling, Multithreading, I/O.											BL4		
CO4	Create code for Event Handling, JavaFX.											BL6		
Mapping of Course Outcomes with Program Outcomes & Program Specific Outcomes														
	POs											PSOs		
CO	1	2	3	4	5	6	7	8	9	10	11	1	2	3
CO1	3	2	3	-	-	-	-	-	-	-	-	3	3	2
CO2	3	2	3	-	-	-	-	-	-	-	-	3	3	2
CO3	3	2	3	-	-	-	-	-	-	-	-	3	3	2
CO4	3	2	3	-	2	-	-	-	-	-	-	3	3	2
IST OF EXPERIMENTS														
												48 hours		
1. Write a Java program to declare, initialize and access the elements of single-dimensional Arrays and multi-dimensional Arrays. Display the array elements using loops. 2. Develop a Java program to demonstrate the use of static variables, static methods, and static blocks. 3. Create a Java program that demonstrates method overloading (Compile-time Polymorphism) and method overriding (Runtime Polymorphism) using inheritance. 4. Write a Java program to illustrate the concept of multiple inheritance through the implementation of multiple interfaces. 5. Develop a Java program that demonstrates the use of all exception handling keywords: <i>try</i>, <i>catch</i>, <i>throw</i>, <i>throws</i>, and <i>finally</i>. 6. Write a Java program to create and handle one or more user-defined exceptions with meaningful messages.														

Bapatla Engineering College: Bapatla -522102 (Autonomous)

Approved by AICTE :: Affiliated to ACHARYA NAGARJUNA UNIVERSITY

Department of Computer Science & Engineering

7. Design a Java program to demonstrate the creation and use of packages. Include at least two classes from different packages.
8. Implement a Java program to demonstrate inter-thread communication using *wait()*, *notify()*, and *notifyAll()* methods.
9. Write a Java program to copy the contents of one file to another using ***FileInputStream*** and ***FileOutputStream***. Demonstrate the use of try-with-resources for automatic resource management.
10. Design a JavaFX application that enables users to draw directly on a Canvas using mouse events.
11. Create a JavaFX application to demonstrate handling action events with appropriate UI components.
12. Develop a JavaFX application to demonstrate the usage of list-based controls with event handling.
13. Design a JavaFX application that demonstrates the creation and use of menus with event handling.

HEALTH AND WELLNESS, YOGA AND SPORTS															
II B. Tech. – III Semester (Code: 24CSL304)															
Lectures	0	Tutorial	0	Practical	1	Credits	0.5								
Continuous Internal Evaluation				100	Semester End Examination							--			
Pre-Requisite: None.															
Course Objectives:															
➤ Make the students maintain their mental and physical wellness by balancing emotions in their life. ➤ Mainly enhances the essential traits required for the development of the personality.															
Course Outcomes: At the end of this course, Students will be able to															
CO1	Outline the importance of yoga and sports for Physical fitness and sound health. (L2)													BL2	
CO2	Make use of various activities that help to enhance their health. (L3)													BL3	
CO3	Develop Positive Personality for individual and group work. (L3)													BL3	
CO4	Categorize the health-related fitness components and analyze the current personal fitness levels. (L4)													BL4

CO4	-	-	-	-	-	-	-	-	2	-	3	-	-	-	
UNIT-I															
UNIT-I													6 hours		
Concept of health and fitness, Nutrition and Balanced diet, basic concept of immunity Relationship between diet and fitness, Globalization and its impact on health, Body Mass Index (BMI) of all age groups.															
Activities:															
i) Organizing health awareness programmes in community															
ii) Preparation of health profile															
iii) Preparation of chart for balance diet for all age groups															
UNIT-II													5 hours		
Concept of yoga, need for and importance of yoga, origin and history of yoga in Indian context, classification of yoga, Physiological effects of Asanas-Pranayama and meditation, stress management and yoga, Mental health and yoga practice.

CONSTITUTION OF INDIA													
II B.Tech – III Semester (Code: 24CS306/MC02)													
Lectures	2	Tutorial	0	Practical	0	Credits	0						
Continuous Internal Evaluation			40	Semester End Examination					--				
Pre-Requisite: None.													
Course Objectives:													
➤ Provide basic information about fundamental law of the country. ➤ Educate the student about fundamental Rights and fundamental duties of citizens. ➤ Educate the students about Government organs, methods of functioning ➤ Motivate students to leave narrow selfish outlook and inculcate broad national, human outlook.													
Course Outcomes: At the end of this course, Students will be able to													
CO1	Understand the importance of the constitution in a Democratic Society											BL2	
CO2	Understand the fundamental rights, duties of a citizen by discharging his duties to become a good citizen.											BL2	
CO3	Remember about judicial supremacy and independence of judiciary and fight for his legitimate rights through court of law.											BL1	
CO4	Applying the principles to participate in the democratic process of governance and in nation building activities.											BL3

CO4	3	1	2	-	-	-	-	3	-	1	3	2	-
UNIT-I												8 hours	
1.1 Meaning of the constitutional law and constitutionalism.													
1.2 Historical perceptive of the constitution of India													
1.3 Salient features and characteristics of the constitution of India.													
1.4 Preamble, union and its territory and citizenship.													
UNIT-II												8 hours	
2.1. Fundamental rights principles.													
2.2. Directive principles of state policy.													
2.3. Fundamental duties.													
2.4. The government of the union, the president, The Prime Minister, and the council of ministers, The parliament of India, The supreme court, the union judiciary													
UNIT-III												8 hours

COMPUTER ORGANIZATION														
II B. Tech. – IV Semester (Code: 24CS401)														
Lectures	3	Tutorial	0	Practical	0	Credits	3							
Continuous Internal Evaluation				40	Semester End Examination					60				
Pre-Requisite: Digital Logic Design (24CS302)														
Course Objectives:														
➤ Represent the data, micro-operations, and hardware implementation of arithmetic, logic and shift unit. ➤ Know about the instruction codes and generation of control signals using hardwired and micro-programmed approaches. ➤ Learn about the different types of instructions and arithmetic operations. ➤ Understand the organization of the memory and I/O units.														
Course Outcomes: At the end of this course, Students will be able to														
CO1	Understand the basic structure of computer and analyzing the concepts of machine instructions.											BL4		
CO2	Illustrate the various arithmetic operation and learn about basic processing time.											BL2		
CO3	Review the basic computer instruction set and create flowcharts for the arithmetic operations.											BL6		
CO4	Recognize the I/O and memory organizations.											BL1

AUTOMATA THEORY & FORMAL LANGUAGES														
II B. Tech. IV Semester (Code: 24CS402)														
Lectures	2	Tutorial	1	Practical	0	Credits	3							
Continuous Internal Evaluation			40	Semester End Examination			60							
Pre-Requisite: Discrete Mathematics (24CS205)														
Course Objectives:														
➤ Understand the theory of automata and formal languages. Construct finite automata, and conversion between DFA and NFA. ➤ Demonstrate the connection between regular expressions, languages, and finite automata. ➤ Demonstrate the connection between pushdown automata and context-free languages and context-free grammars. ➤ Construct Turing machines for a given task. Understand the undecidability problems of the Turing Machine and the Post-Correspondence Problem (PCP).														
Course Outcomes: At the end of this course, Students will be able to														
CO1	Comprehend automata and their uses. Create finite automata and switch between implementations that are deterministic and nondeterministic.						BL6							
CO2	Transform finite automata into regular expressions and the other way around. Make a minimal DFA.						BL4							
CO3	Build push-down automata for several context-free languages. Explain how PDA and context-free grammars are related.						BL6							
CO4	Design Turing machines for different languages. Learn about TM and post correspondence problems that are undecidable.						BL6							
Mapping of Course Outcomes with Program Outcomes & Program Specific Outcomes														
	POs											PSOs		
CO	1	2	3	4	5	6	7	8	9	10	11	1	2	3
CO1	3	2	2	-	-	-	-	-	-	-	-	2	2	-
CO2	2	2	2	-	-	-	-	-	-	-	-	2	2	-
CO3	3	3	3	-	-	-	-	-	-	-	-	2	2	-
CO4	3	3	3	-	-	-	-	-	-	-	-	2	2	-
UNIT-I														
													12 hours	
Automata: Why Study Automata Theory? The central concepts of automata theory - alphabets, strings, languages, and problems.														
Finite Automata: An Informal picture of finite automata, Deterministic finite automata (DFA) - Definition of DFA, DFA processing strings, notations for DFA, extended transition function, the language of DFA, Non deterministic finite automata (NFA) – Definition of NFA, extended transition function, the language of NFA, equivalence of DFA and NFA.														
Automata with ϵ transitions: Use of ϵ -transitions, notation for a ϵ -NFA, epsilon closures, extended transitions and languages, eliminating ϵ -transitions.														

UNIT-II		12 hours
Regular Expressions and Languages: Regular expressions, finite automata and regular expressions, Algebraic laws of regular expressions. Properties of Regular Languages: Proving languages are not regular – Pumping lemma for regular languages, Applications of the pumping lemma, Closure Properties of Regular Languages, Equivalence and minimization of automata – Minimization of DFA.		
UNIT-III		12 hours
<i>(Construction-based treatment & proofs are excluded)</i> Context Free Grammars: Context Free Grammars, Parse Trees, and Ambiguous Grammars. Pushdown Automata: Definition of the Pushdown automata, the languages of PDA, Equivalences of PDA's and CFGs. Context-free languages: Normal forms for context-free grammars, the pumping lemma for context-free languages.		
UNIT-IV		12 hours
Properties of Context-free Languages: Closure properties for context-free languages, Decision properties for CFLs. Introduction to Turing Machines: The Turing Machine, Programming techniques for Turing machines. Undecidability: A language that is not recursively enumerable, an undecidable problem that is RE, Undecidability problems about TM, Post's Correspondence problem.		
Text Books :	John E. Hopcroft, Rajeev Motwani, & Jeffrey D. Ullman, "Introduction to Automata Theory, Languages and Computations", Pearson Education, 2008, Third Edition, ISBN: 978-8131720479.

WEB TECHNOLOGIES															
II B.Tech – IV Semester (Code: 24CS403)															
Lectures	3	Tutorial	0	Practical	0	Credits	3								
Continuous Internal Evaluation				40	Semester End Examination							60			
Pre-Requisite: None.															
Course Objectives:															
➤ Know skills in creating standards-compliant web pages having semantic elements, Formatting, arranging text, Multimedia, Forms. ➤ Apply CSS3 and DHTML features in creating dynamic and interactive web pages. ➤ Know the basics of JavaScript Objects, DOM and ES6 features. ➤ Understand the React.js front-end framework basics.															
Course Outcomes: At the end of this course, Students will be able to															
CO1	Develop basic HTML5 web applications using standard and semantic elements, formatting, Arranging Text, Multimedia and Forms.												BL6		
CO2	Apply CSS3 styling concepts and basic JavaScript Functions, arrays and Events to create dynamic and interactive web pages												BL3		
CO3	Build dynamic web pages using JavaScript Objects, DOM, and ES6 features.												BL6		
CO4	Develop React applications using Props, State, handling Events, Forms and React Router.												BL6

CO4	2	2	2	2	3	2	-	-	-	-	-	3	3	-	
Unit-I															
													12 hours		
HTML 5: Understanding elements: ROOT, Metadata, Heading, Flow, Basic HTML data types, Character Entities.															
Formatting Text: Physical style elements, Logical style elements.															
Arranging Text: Preformatted Text, DIV, SPAN; Exploring the hyperlink, Structuring URL; Creating Tables.															
Working with Images and Colors: Image Formats, exploring Colors; Working with Forms.															
Unit-II													12 hours		
CSS3: Overview of Styles, Exploring the Box model, Font and Text styles. Displaying, Positioning and Floating an Element, List Styles and Table Layouts.															
Dynamic HTML: Overview of JavaScript: JavaScript Functions, Arrays and Events.															
Unit-III													12 hours		
JavaScript Objects: Understanding the Window Object, working with the Document Object.

DATABASE MANAGEMENT SYSTEMS														
II B. Tech. – IV Semester (Code: 24CS404)														
Lectures	3	Tutorial	0	Practical	0	Credits	3							
Continuous Internal Evaluation			40	Semester End Examination			60							
Pre-Requisite: None														
Course Objectives:														
➤ Familiarize with fundamental concepts of database and various database architectures and Design relations for Relational databases using conceptual data modeling. ➤ Implement formal relational operations in relational algebra and SQL. ➤ Identify the Indexing types and normalization process for relational databases ➤ Use mechanisms for the development of multi user database applications.														
Course Outcomes: At the end of this course, Students will be able to														
CO1	Apply knowledge of database design methodology which give a good formal foundation in relational data model and understand and apply the principles of data modeling using ER Model.						BL3							
CO2	Create relational algebra expressions, relational calculus, and SQL for queries and be familiar with relational database theory						BL6							
CO3	Design database schema and identify and solve the redundancy problem in database tables using normalization.						BL6							
CO4	Learn about transaction processing, concurrency management, and recovery methods.						BL2

UNIT-I														12 hours
Databases and Database Users: Introduction - An Example, Characteristics of the Database Approach, Actors on the Scene, Workers behind the Scene, Advantages of Using the DBMS Approach.														
Database System Concepts: Data Models, Schemas and Instances, Three-Schema Architecture and Data Independence, Database Languages and Interfaces, Classifications of Database management systems.														
Data Modeling Using the Entity-Relationship (ER) Model: Using High-Level Conceptual Data Models for Database Design, An Example Database Application, Entity Types, Entity Sets, Attributes, and Keys - Relationship Types, Relationship Sets, Roles, and Structural Constraints.														

Bapatla Engineering College: Bapatla -522102 (Autonomous)

Approved by AICTE :: Affiliated to ACHARYA NAGARJUNA UNIVERSITY

Department of Computer Science & Engineering

Weak Entity Types, Refining the ER Design for the COMPANY Database - ER Diagrams, Naming Conventions, and Design Issues	
UNIT-II	12 hours
The Relational Algebra and Relational Calculus: Unary Relational Operations: SELECT and PROJECT, Relational Algebra Operations from Set Theory, Binary Relational Operations: JOIN and DIVISION, The Tuple Relational Calculus, The Domain Relational Calculus.	
Schema Definition, Constraints, Queries, and Views: SQL Data Definition and Data Types, Specifying Constraints in SQL, Schema Change Statements in SQL, Basic Queries in SQL, INSERT, DELETE, and UPDATE Statements in SQL, Views (Virtual Tables) in SQL	
UNIT-III	12 hours
Indexing Structures for Files: Types of Single-Level Ordered Indexes, Multilevel Indexes - Dynamic Multilevel Indexes Using B+-Trees.	
Functional Dependencies and Normalization for Relational Databases: Informal Design Guidelines for Relation Schemas, Functional Dependencies, Normal Forms Based on Primary Keys - General Definitions of Second and Third Normal Forms, Boyce-Codd Normal Form.	
Relational Database Design Algorithms and Further Dependencies: Properties of Relational Decompositions -Lossless Join Decomposition and Dependency Preserving Decomposition, Multi-valued Dependencies and Fourth Normal Form, Join Dependencies and Fifth Normal Form.	
UNIT-IV	12 hours
Transaction & ACID: Transaction, ACID properties, States of the transaction	
Transaction Problems: Lost update and dirty read problem, unrepeatable read and phantom problem, incorrect summary problem.	
Schedules: Number of schedules, types of schedules : Serial schedule, complete schedule, recoverable schedule, cascading aborts, cascade-less schedule, strict schedule	
Serializability: Conflict Serializability, View Serializability, comparison between conflict and view serializability	
Concurrency Control Protocols: locks, 2-phase locking protocol, strict 2PL, rigorous 2PL, conservative 2PL, example on strict 2PL.	
Graph & Timestamp Protocols: Graph-based protocol, timestamp ordering protocol, examples on timestamp ordering protocol, Thomas Write Rule.	
Text Books :	Fundamentals of Database Systems, Ramez Elmasri and Navathe Pearson Education, 6th edition
References :	1. Introduction to Database Systems, C.J. Date Pearson Education 2. Database Management Systems, Raghu Rama krishnan, Johannes Gehrke, TATA McGraw Hill 3rd Edition 3. Database System Concepts, Silberschatz, Korth, McGraw hill, 5th edition

DESIGN AND ANALYSIS OF ALGORITHMS														
II B. Tech. - IV Semester (Code: 24CS405)														
Lectures	2	Tutorial	1	Practical	0	Credits	3							
Continuous Internal Evaluation			40	Semester End Examination			60							
Pre-Requisite: Data Structures (24CS303)														
Course Objectives:														
➤ Understand about designing and the effectiveness of an algorithm, and applying the Master Theorem to find the complexity. ➤ Strengthen the divide and conquer paradigms and know the optimal solution finding with the greedy method. ➤ Acquaintance with algorithm design strategies of Dynamic programming and easily know the significant graph algorithms and their analyses. ➤ Get the ability to backtrack and branch with bound values and NP problems.														
Course Outcomes: At the end of this course, Students will be able to														
CO1	Analyze algorithms' performance using various strategies and apply the Master theorem to estimate the complexity of divide-and-conquer algorithms.						BL4							
CO2	Apply the divide-and-conquer and greedy techniques to solve problems and perform complexity analysis.						BL3							
CO3	Articulate on graph problems and identify the applicability of the dynamic programming paradigm for designing solutions to problems.						BL4							
CO4	Utilize the backtracking and branch and bound algorithms to find every potential solution to combinatorial and optimization issues. In addition, classify the P and NP complicated problems.						BL4							
Mapping of Course Outcomes with Program Outcomes & Program Specific Outcomes														
	POs											PSOs		
CO	1	2	3	4	5	6	7	8	9	10	11	1	2	3
CO1	3	3	3	-	-	-	-	-	-	-	3	3	3	-
CO2	3	3	3	-	-	-	-	-	-	-	3	3	3	-
CO3	3	3	3	-	-	-	-	-	-	-	3	3	3	-
CO4	3	3	3	-	-	-	-	-	-	-	3	3	3	-
UNIT-I														12 hours
Introduction: Algorithm, Pseudo code for expressing algorithms, Performance Analysis- Space complexity, Time complexity, Asymptotic Notation – Big O notation, Big Omega notation, Theta notation.														
Master Theorem: Introduction, Generic Form- Case1, Case2, Case3, Inadmissible equations, Application to standard algorithms.														
UNIT-II														12 hours
Divide and conquer: General method, applications - Quicksort, Merge sort, Stassen’s matrix multiplication.														

Greedy method: General method, applications-Job sequencing with deadlines, Fractional knapsack problem, Minimum cost spanning trees – Prim’s Algorithm, Kruskal’s Algorithm, Single source shortest paths – Dijkstra Algorithm.	
UNIT-III	12 hours
Dynamic Programming: General method, applications - Multi-stage graphs using Forward & Backward approach, 0/1 knapsack problem, Reliability design, The Travelling salesperson problem, Longest common subsequence algorithm. Graph Applications: Connected components, Bi-Connected Components, Strongly Connected Components.	
UNIT-IV	12 hours
Backtracking: General method, applications - The 8-queens problem, sum of subsets problem. Branch and Bound: General method, applications- LC Branch and Bound solution for 0/1 knapsack problem. NP-Hard and NP-Complete problems: Basic concepts - non-deterministic algorithms, NP-Hard and NP Complete classes, Cook’s theorem.	
Text Books :	E. Horowitz, S.Sahni and S. Rajasekaran, “Fundamentals of Computer Algorithms”, Galgotia Publication.

COMPETITIVE PROGRAMMING SKILLS														
(Skill Enhancement Course – 2)														
II B. Tech. – IV Semester (Code: 24CSL401/SEC2)														
Lectures	1	Tutorial	0	Practical	2	Credits	2							
Continuous Internal Evaluation			40	Semester End Examination			60							
Pre-Requisite: Programming for problem solving (24CS204), Data Structures (24CS302)														
Course Objectives:														
➤ To provide practical exposure to all algorithms and understand the importance of algorithms and their complexities. ➤ To implement various divide and conquer and Greedy method techniques examples. ➤ To implement various Dynamic Programming-based examples. ➤ To implement various backtracking and branch-and-bound examples.														
Course Outcomes: At the end of this course, Students will be able to														
CO1	Understand and implement an algorithm to solve problems by an iterative approach.						BL3							
CO2	Understand and implement an algorithm to solve problems by divide and conquer, as well as the greedy algorithm approach.						BL3							
CO3	Understand and analyze algorithms to solve problems using Dynamic programming.						BL4							
CO4	Understand and analyze the algorithm to solve problems by backtracking and the branch and bound approach.						BL4							
Mapping of Course Outcomes with Program Outcomes & Program Specific Outcomes														
	POs											PSOs		
CO	1	2	3	4	5	6	7	8	9	10	11	1	2	3
CO1	2	3	3	3	3	-	-	-	-	-	-	-	-	2
CO2	2	3	3	3	3	-	-	-	-	-	-	-	-	3
CO3	2	3	3	2	2	-	-	-	-	-	-	-	-	3
CO4	2	3	3	2	2	-	-	-	-	-	-	-	-	2
LIST OF EXPERIMENTS								48 hours						
1. Write a program to implement Binary Search and count the number of comparisons made during the search to analyze its time complexity.														
2. Write a program to implement the Merge Sort algorithm to sort a list of elements using the divide and conquer strategy.														
3. Write a program to implement the Quick Sort algorithm to sort a list of elements using the divide-and-conquer strategy.														
4. Write a program for matrix multiplication using Strassen's algorithm based on the divide and conquer approach.														
5. Implement a program to solve the Fractional Knapsack problem using the greedy method.														

6. Implement a program to find a graph's Minimum Cost Spanning Tree (MST) using Prim's algorithm based on the greedy strategy.
7. Implement a program to find a graph's Minimum Cost Spanning Tree (MST) using Kruskal's algorithm based on the greedy strategy.
8. Implement a program to find the shortest paths from a source vertex to all other vertices in a graph using Dijkstra's algorithm with the greedy method.
9. Write a program to solve the Traveling Salesman Problem using dynamic programming.
10. Write a program to solve the 0/1 Knapsack problem using dynamic programming and display the solution vector.
11. Using dynamic programming, write a program to compute the Longest Common Subsequence (LCS) of two sequences.
12. Write a program to determine the shortest path in a multi-stage graph using both forward and backward approaches based on dynamic programming.
13. Write a program to solve the 8-Queens problem using backtracking.

DESIGN THINKING AND INNOVATION														
II B. Tech. - IV Semester (24CSL402)														
Lectures	1	Tutorial	0	Practical	2	Credits	2							
Continuous Internal Evaluation				40	Semester End Examination						60			
Pre-Requisite: None														
Course Objectives:														
➤ Provide an overview of design thinking. ➤ Engage students to allow them to integrate these components into their own courses. ➤ Nurture their skills to contribute for solving community-based problems ➤ Provide a framework to work in teams to solve problems														
Course Outcomes: At the end of this course, Students will be able to														
CO1	Describe the components of design thinking													BL2
CO2	List attributes of expert designers													BL1
CO3	Employ prototyping into their design experiences													BL3
CO4	Discuss the importance of users in the design process in proposing solutions													BL2
Mapping of Course Outcomes with Program Outcomes & Program Specific Outcomes														
	POs											PSOs		
CO	1	2	3	4	5	6	7	8	9	10	11	1	2	3
CO1	3	3	2	-	-	-	-	-	-	-	2	-	-	-
CO2	3	3	3	-	-	-	-	-	-	-	2	-	-	-
CO3	3	3	3	-	-	-	-	-	-	-	2	-	-	-
CO4	2	2	2	-	-	-	-	-	-	-	2	-	-	-
UNIT-I														
													12 hours	
Introduction to Design Thinking: Characteristics of design thinking, Expert and novice design characteristics, Opportunities for student to learn skills needed for the development of expertise.														
Case study for design thinking success: Creating a culture of design learning, Gathering information from users, Rapid prototyping.														
UNIT-II														
													12 hours	
Users and community partners: Understanding users, identifying users, creating tools for understanding users														
Requirements and specifications: Defining specifications, State of the art comparisons, Testing requirements														
UNIT-III														
													12 hours	
Prototyping: Prototypes for technology, Prototypes for communication														
Ideation and concept generation: Brainstorming, Concept generation, Functional decomposition.														

Testing and design to prevent failures: Testing of designs, Design for Failure Modes and Effects Analysis (DFMEA), Delivery to users	
UNIT-IV	12 hours
Teaming concepts in design: Managing student teams, Organizing teams, Assessing teams, Mentoring and advising teams	
Closure and summary: Reviewing design cycles and concepts, Putting it into action	
Practical Exercises 1. Design Thinking Mind Map Exercise 2. Functional Decomposition – eg: Mechanical Pencil 3. Thirty Circle Exercise – IDEO thinking 4. Shopping Cart Design Exercise - IDEO 5. Brain storm and innovate bicycle for better urban mobility 6. Develop an Empathy Map – case study 7. The Lean Canvas Model – business model 8. Technology Readiness Assessment – to evaluate project risks 9. Prototyping Exercise – using paper/thermos coal/cardboard/recyclable material 10. Case study of any Jugaad – economic rural solution 11. Design thinking using sprint base software 12. Presentation on Idea Proposal – along with a Prototype (Domain Specific) 13. Risk Analysis – case study – DFMEA Analysis 14. Test Plan Preparation – case study 15. Interaction with Technical community- viable product delivery Note: Minimum of 10 Exercises have to be completed and documented. Out of these 5 exercises can be tuned to branch specific if necessary.

WEB TECHNOLOGIES LAB																
II B.Tech – IV Semester (Code: 24CSL403)																
Lectures	0	Tutorial	0	Practical	3	Credits	1.5									
Continuous Internal Evaluation				40	Semester End Examination							60				
Pre-Requisite: None.																
Course Objectives:																
➤ Know skills in creating standards-compliant web pages having semantic elements, Multimedia, Forms. ➤ Apply CSS3 and DHTML features in creating a dynamic and interactive web page design. ➤ Know the basics of JavaScript Objects, DOM and ES6 features. ➤ Understand the React.js front-end framework basics.																
Course Outcomes: At the end of this course, Students will be able to																
CO1	Develop basic HTML5 web applications using semantic elements, Multimedia and Forms.														BL6	
CO2	Create Dynamic and Interactive web pages using CSS3 and DHTML.														BL6	
CO3	Build dynamic web pages using JavaScript Objects, DOM, and ES6 features.														BL6	
CO4	Develop React applications using Props, State and React Router.														BL6	
Mapping of Course Outcomes with Program Outcomes & Program Specific Outcomes																
		POs											PSOs

CO4	3	3	3	-	3	-	2	-	2	-	3	3	-	-		
LIST OF EXPERIMENTS																48 hours
1. Design an HTML5 webpage using fundamental elements, organizing text, Links, URLs and Tables.																
2. Design an HTML5 webpage using Images, Colors and Forms.																
3. Demonstrate applying different CSS styling techniques:- CSS styles, Box model, Font, Text, Displaying, Positioning & Floating an element.																
4. Develop a JavaScript application covering Functions and Arrays.																
5. Develop a JavaScript application handling Events.																
6. Create a Student Registration Form using HTML, CSS and JavaScript with features Local Storage of registration details with validation and display in tabular form.																
7. Develop a JavaScript application using the Window Object and Document Object.																
8. Demonstrate the Document Object Model for an HTML document.																

9. Write a program to demonstrate ES6 features.
10. Set up a React App using create-react-app. Create a component-based UI for a simple profile
11. page.
12. Develop a React App to display a Counter and a dynamic list of tasks using Props and State.
13. Develop a React App using Forms and handle Events.

CO4	3	3	3	3	3	-	2	-	2	-	3	3	3	3
LIST OF EXPERIMENTS													48 hours	
Experiment I: DDL, DML, DCL														
1.Create a table EMPLOYEE with following schema:														
(Emp_no, E_name, E_address, E_ph_no, Dept_no, Dept_name, Job_id , Salary)														
a. Add a new column; HIREDATE to the existing relation.														
b. Change the datatype of JOB_ID from char to varchar2.														
c. Change the name of column/field Emp_no to E_no.														
d. delete E_ph_no column.														
2. Create DEPARTMENT table with the following structure.														
Name Type Deptno Number, Deptname Varchar2(10), location Varchar2(10)														
a. Add column designation to the department table.														
b. Insert values into the table.														
c. Update the record where deptno is 9.														

d. Delete any column data from the table.

3. Create a table called CUSTOMER

Name Type Cust_name Varchar2(20), Cust_street Varchar2(20), Cust_city Varchar2(20)

a. Insert records into the

b. Add salary column to the table.

c. Alter the table column domain.

d. Drop salary column of the customer table.

e. Delete the rows of customer table whose cust_city is "hyd".

Experiment II: Simple Queries on Employee Table-selection, projection, sorting

Emp Table

EMPNO	ENAME	JOB	MGR	HIREDATE	SALARY	DNO
7839	KING	PRESIDENT		17-Nov-81	5000	10
7698	BLAKE	MANAGER	7839	1-May-81	2850	30
7782	CLARK	MANAGER	7839	9-Jun-81	2450	10
7566	JONES	MANAGER	7839	2-Apr-81	2975	20
7654	MARTIN	SALESMAN	7698	28-Sep-81	1250	30
7499	ALLEN	SALESMAN	7698	20-Feb-81	1600	30
7844	TURNER	SALESMAN	7698	20-Feb-81	1500	30
7900	JAMES	CLERK	7698	3-Dec-81	950	30
7521	WARD	SALESMAN	7698	22-Feb-81	1250	30
7902	FORD	ANALYST	7782	3-Dec-81	3000	20
7369	SMITH	CLERK	7788	17-Dec-80	800	20
7788	SCOTT	ANALYST	7782	9-Dec-82	3000	20
7876	ADAMS	CLERK	7788	12-Jan-83	1100	20
7934	MILLER	CLERK	7788	23-Jan-82	1300	10

Department table

DNO	DNAME	LOCATION
10	ACCOUNTING	NEW YORK
20	RESEARCH	DALLAS
30	SALES	CHICAGO
40	OPERATIONS	BOSTON

1. List empno, empname and salary.
2. List the names of all MANAGERS.
3. list all clerks in deptno. 30.
4. List the employees to who manager is 7698.
5. List jobs in dept 20.
6. List employee names whose salary is between 2000 and 3000.
7. List employees in the departments 10, 20.
8. List employee names which begin with S.
9. List employee names having 'A' in their names.
10. List employees who have joined in JAN.
11. List employees who have joined in the year 81.
12. List all distinct jobs.
13. List employee names in alphabetical order.
14. List employee names alphabetically department wise.
15. List employee names alphabetically job wise.
16. List employee numbers, name sal, DA(15% OF SAL) and PF (10% of sal).
17. List employee names having an experience more than 15 years.
18. List employee names whose commission is NULL.
19. list employees who do not report to anybody.
20. List maximum sal, minimum sal, average sal.
21. List the numbers of jobs.
22. List the numbers of people and average salary in deptno 30.
23. List maximum sal and minimum sal in the designations SALESMAN and CLERK.
24. List the numbers of people and average salary of employees joined in 81, 82 and 83.
25. List jobs that are unique to deptno 20 set operations (Add more problems).
26. Display today's date and present time.
27. List employee names and their joining date in the following formats
 - A. SMITH 17th DEC NINETEEN EIGHTY
 - B. SMITH SEVENTEENTH DEC NINETEEN EIGHTY
 - C. SMITH Weekday of joining
 - D. SMITH 17/12/80
28. List employee names and their experience in years
29. List employee names who joined in DEC and on Monday or Friday.

30. Display a given date as a string in different formats.

Experiment III: Advanced SQL Queries on Employee Table – Dynamic Relations, EXISTS, NOT EXISTS, Aggregate Functions (COUNT, SUM, AVG, MAX and MIN), Conversion Functions & String Functions

1. List employee names and their hire dates sorted in the order of their experience.
2. List managers names and their joining dates completely spelled in alphabetical order of names.
3. List employee names and their experience in years with names arranged in descending order.
4. List the employees' names having minimum of 2years of experience sorted on experience
5. List employee names with all capital letters, with all small letters and with first letter only as capital.
6. List employee names with length of the name sorted on length.
7. List employee names appending Sri to the beginning and Garu to the end.
8. List employee names and month names of joining.
9. List employee names and year of joining in words.
10. List employee's names, job and salary with 5 hyphens in between.
11. List employee names and position of first occurrence of I in their name.
12. List employee names and the string without first character and last character in their name.
13. List employees who joined between Apr 81 and Apr 82.
14. List max sal, min sal and average sal of depts. 10, 30.
15. List the designation in dept 30 but not in 20.
16. List the number of employees in each department along with dept numbers.
17. List number of employees joined year wise.
18. List number of employees job wise.
19. List max sal, min sal, average salary dept wise.
20. List max sal, min sal, average salary job wise.
21. List max sal, min sal for the jobs MANAGER and CLERK.
22. List max sal, min sal AND average salary of the depts. Having a minimum 3 employees.
23. List the number of employees in each job in each department.
24. MGR and the number of employees report to them in the sorted order.
25. List emp numbers of employees to whom a minimum of 3 people report.
26. List dept numbers having a minimum of 3 persons.
27. List names of jobs having a minimum of 3 persons in that job.
28. List names of months in which a minimum of 3 persons joined.

29. List hiredates of employees having 2 or more employees having the same hiredate.

30. List departments having minimum of 3 people having a minimum of 28 years of experience.

Experiment IV: Advanced queries - JOIN OPERATIONS

Structure of the database (Suppliers-Parts-Projects database):

S: (S#, SNAME, STATUS, CITY) PRIMARY KEY (S#)

P: (P#, PNAME, COLOR, WEIGHT, CITY) PRIMARY KEY(P#)

J: (J#, JNAME, CITY) PRIMARY KEY(J#)

SPJ: (S#, P#, J#, QTY)

PRIMARY KEY(S#, P#, J#)

FOREIGN KEY(S#) REFERENCES S

FOREIGN KEY(P#) REFERENCES P

FOREIGN KEY(J#) REFERENCES J

Tables of the above database

S TABLE:

S	SNAME	STATUS	CITY
S1	Smith	20	London
S2	Jones	10	Paris
S3	Blake	30	Paris
S4	Clark	20	London
S5	Adams	30	Athens

P TABLE:

P	PNAME	COLOR	WEIGH	CITY
P1	Nut	Red	18	London
P2	Bolt	Green	17	Paris
P3	Screw	Blue	17	Rome
P4	Screw	Red	14	London
P5	Cam	Blue	12	Paris
P6	Cog	Red	19	London

J TABLE:

J	JNAME	CITY
J1	Sorter	Paris
J2	Display	Rome
J3	OCR	Athens
J4	Console	Athens
J5	Raid	London
J6	EDC	Oslo
J7	Tape	London

SPJ TABLE:

S#	P#	J#	QTY
S1	P1	J1	200
S1	P1	J4	700
S2	P3	J1	400
S2	P3	J2	200
S2	P3	J3	200
S2	P3	J4	500
S2	P3	J5	600
S2	P3	J6	400
S2	P3	J7	800
S2	P5	J2	100
S3	P3	J1	200
S3	P4	J2	500
S4	P6	J3	300
S4	P6	J7	300
S5	P2	J2	200
S5	P2	J4	100
S5	P5	J5	500
S5	P5	J7	100
S5	P6	J2	200
S5	P1	J4	100
S5	P3	J4	200
S5	P4	J4	800

Note: Here in subsequent exercises, the term “all” is to be taken to mean “all currently represented in the Database”, not “all possible”.

1. Get full details of all projects.
2. Get full details of all Projects in London
3. Get supplier numbers for Suppliers who supply Project J1.
4. Get all shipments where the quantity is in the range 300 to 700.
5. Get all part-color/part-city combinations.
6. Get all Supplier-number/part-number/Project-number triples such that the indicated Supplier part and Project are collocated.
7. Get all supplier-number/part-number/project-number triples such that the indicated supplier, part and project are not all collocated.
8. Get all supplier-number/part-number/ project-number triples such that the indicated supplier, part and project are collocated.
9. Get part numbers for parts supplied by a supplier in London.
10. Get part numbers for parts supplied by a supplier in London to a project in London.
11. Get all pairs of city names such that a supplier in the first city supplies a project in the second city.
12. Get part numbers for parts supplied to any project by a supplier in the same city as that project.
13. Get project numbers for projects supplied by atleast one supplier not in the same city.
14. Get all pairs of part numbers such that some supplier supplies both the indicated parts.
15. Get the total number of projects supplied by supplier S1.
16. Get the total quantity of part P1 supplied by suppliers S1.
17. For each part being supplied to some project get the part number, the project numbers and the corresponding total quantity.
18. Get part numbers of parts supplied to some project in an average quantity of more than 320.
19. Get project names for projects supplied by supplier S1.
20. Get colors of parts supplied by supplier S1.
21. Get parts numbers for parts supplied to any project in London.
22. Get project numbers for projects using atleast one part available from supplier S1.
23. Get supplier numbers for suppliers supplying atleast one part supplied by atleast one supplier who supplies atleast one red part.
24. Get supplier numbers for suppliers with a status lower than that of supplier S1.
25. Get project numbers for projects whose city is first in the alphabetic list

Experiment V: Working with LOOPS using PL/SQL

Program Development using WHILE LOOPS, FOR LOOPS, Nested Loops using ERROR Handling.

Experiment VI: Working with Functions Using PL/SQL

Program Development using Creation of Stored Functions, Invoke Functions in SQL Statements and Write Complex Functions.

Experiment VII: Working with Stored Procedures

Programs Development using Creation of Procedures, Passing Parameters IN and OUT of PROCEDURES

Experiment VIII: Working with CURSORS

Develop Programs using Features Parameters in a CURSOR, FOR UPDATE CURSOR, WHERE CURRENT of Clause and CURSOR Variables.

Text Books :

1. Oracle PL/SQL by Example, Benjamin Rosenzweig, Elena Silvestrova, Pearson Education 3rdEd.
2. Oracle Database Logic PL/SQL Programming, Scott Urman, Tata McGraw Hill.
3. SQL and PL/SQL for Oracle 10g, Black Book, Dr. P. S. Deshpande.

NSS/ NCC/SCOUTS & GUIDES/COMMUNITY SERVICE															
II B. Tech. – IV Semester (Code: 24CSL405)															
Lectures	0	Tutorial	0	Practical	1	Credits	0.5								
Continuous Internal Evaluation				100	Semester End Examination							-			
Pre-Requisite: None															
Course Objectives:															
➤ Impart discipline, character, fraternity, teamwork, social consciousness among the students. ➤ Engage the students in selfless service															
Course Outcomes: At the end of this course, Students will be able to															
CO1	Develop discipline, character and service motto.														BL3
CO2	Solve some societal issues by applying acquired knowledge, facts, and techniques.														BL3
CO3	Explore human relationships by analyzing social problems.														BL4
CO4	Extend their help through leadership skills and civic responsibilities to the fellow beings and downtrodden people.														BL3
Mapping of Course Outcomes with Program Outcomes & Program Specific Outcomes															
		POs											PSOs		
CO	1	2	3	4	5	6	7	8	9	10	11	1	2	3	
CO1	-	-	-	-	-	-	-	-	2	-	3	-	-	-

UNIT-I															
														6 hours	
General Orientation on NSS/NCC/ Scouts & Guides/Community Service activities and career guidance.															
Activities:															
1. Conducting -ice breaking sessions-expectations from the course-knowing personal talents and skills															
2. Conducting orientations programs for the students -future plans-activities-releasing road map etc.															
3. Displaying success stories-motivational biopics-award winning movies on societal issues etc.															
4. Conducting talent show in singing patriotic songs-paintings-any other contribution.															
UNIT-II														5 hours	
Nature & Care															
Activities:															
1. Best out of waste competition.															
2. Poster and signs making competition to spread environmental awareness.															
4. Recycling and environmental pollution article writing competition.															
5. Organising Zero-waste day.															

Bapatla Engineering College: Bapatla -522102 (Autonomous)

Approved by AICTE :: Affiliated to ACHARYA NAGARJUNA UNIVERSITY

Department of Computer Science & Engineering

6. Digital Environmental awareness activity via various social media platforms. 7. Virtual demonstration of different eco-friendly approaches for sustainable living. 8. Write a summary on any book related to environmental issues.	
UNIT-III	5 hours
Community Service Activities: 1. Conducting One Day Special Camp in a village contacting village-area leaders-Survey in the village, identification of problems-helping them to solve via media-authorities-experts-etc. 2. Conducting awareness programs on Health-related issues such as General Health, Mental health, Spiritual Health, HIV/AIDS. 3. Conducting consumer Awareness. Explaining various legal provisions etc. 4. Women Empowerment Programmes-Sexual Abuse, Adolescent Health and Population Education. 5. Any other programmes in collaboration with local charities, NGOs etc.

ENVIRONMENTAL SCIENCE																	
II B. Tech. – IV Semester (Code: 24CS406/MC01)																	
Lectures	2	Tutorial	0	Practical	0	Credits	0										
Continuous Internal Evaluation				40	Semester End Examination						--						
Pre-Requisite: Chemistry, Physics, Geography and Earth Science																	
Course Objectives:																	
➤ Understand and learn about ecosystem and biodiversity exist in nature. ➤ Know about the natural resources and sustainability ➤ Understand different types of pollutions present in Environment ➤ Know the global environmental problems with case studies																	
Course Outcomes: At the end of this course, Students will be able to																	
CO1	Students develop a strong understanding of ecosystems, biodiversity and the importance of their conservation														BL2		
CO2	Students gain an understanding of the protection of natural resources for environmental protection and sustainability.														BL2		
CO3	Know how to manage the harmful pollutions														BL3		
CO4	Create awareness among the youth on environmental concerns important in the long-term interest of the society.														BL6		
Mapping of Course Outcomes with Program Outcomes & Program Specific Outcomes																	
		PO's											PSO's

CO4	3	2	-	-	-	3	-	-	-	-	-	1	-	-	-		
UNIT-I																	
Ecosystems: Definition, Structure and Functions of Ecosystems, Forest Ecosystem.															8 hours		
Biodiversity: Definition and levels of Biodiversity; Values of Biodiversity, Threats and Conservation of Biodiversity.																	
UNIT-II																	
Natural resources: Land: Land as a resource, Causes and effects of land degradation,															8 hours		
Water: floods and drought, Dams - benefits and problems.																	
Sustainability: Rain water harvesting and Watershed management. .																	
UNIT-III																	
Pollution: Definition; Causes, effects and control of air, water pollution:															8 hours

Solid Waste Management - 3R approach, composting and vermin-composting.	
UNIT-IV	8 hours
Environmental issues: Global warming, Ozone layer depletion, Acid rains.	
Case Studies: Bhopal Tragedy, Mathura Refinery and TajMahal.	
Text Books :	1. “Environmental Science and Engineering” by Benny Joseph, Tata McGraw-Hill Publishing Company Limited, New Delhi. 2. “Introduction to Environmental Science”, Anjaneyulu Y, B S Publications 3. “Comprehensive environmental studies”- JP Sharma, Laxmi Publications.
References :	1. “Environmental studies”, R. Rajagopalan, Oxford University Press. 2. “Environmental Science”, 11th Edition – Thomson Series – By Jr. G. Tyler Miller. 3. Text Book of environmental Studies – Erach Bharucha

COMPILER DESIGN														
III B. Tech. – V Semester (Code: 24CS501)														
Lectures	3	Tutorial	0	Practical	0	Credits	3							
Continuous Internal Evaluation				40	Semester End Examination					60				
Pre-Requisite: Automata Theory & Formal Languages (24CS402)														
Course Objectives: Students will be able to														
➤ Comprehend the principles involved in the design and construction of compilers, the algorithms involved in the design and construction of compilers and understand the design of lexical analyzers. ➤ Practice various Bottom-Up parsing techniques. ➤ Apply various intermediate languages and understand code generation algorithm. ➤ Learn various storage allocation strategies and symbol table data structures.														
Course Outcomes: At the end of this course, Students will be able to														
CO1	Comprehend the ideas of compiler design and construction, as well as the algorithms underlying these processes and recognize the lexical analyzer's layout.											BL		
CO2	Practice different Bottom-up parsing methods.											BL		
CO3	Implement several intermediate languages to comprehend the code generating algorithm.											BL		
CO4	Illustrate various storage allocation strategies and symbol table data structures.											BL		
Mapping of Course Outcomes with Program Outcomes & Program Specific Outcomes

CO4	2	2	2	-	-	-	-	-	-	-	-	3	2	-
UNIT-I														
													12 hours	
Introduction: Language Processors, The Structure of a Compiler. Lexical Analysis: The Role of the Lexical Analyzer, Input Buffering, Specification of Tokens, Recognition of Tokens, The Lexical-Analyzer Generator Lex. Syntax Analysis: Introduction, Writing a Grammar: Elimination of Left Recursion, Left Factoring, Top-Down Parsing: Recursive-Descent Parsing, FIRST and FOLLOW, LL(1) Grammars, Non-Recursive Predictive Parsing.														
UNIT-II													12 hours	
Bottom-Up Parsing: Introduction to LR Parsing - Simple LR, More Powerful LR Parsers: Canonical LR(1) Items, Constructing LR(1) Sets of Items, Canonical LR(1) Parsing Tables, Constructing LALR Parsing Table. The Parser Generator YACC.														

Syntax-Directed Translation: Syntax-Directed Definitions, Evaluation Orders for SDD's, Construction of Syntax Trees.	
UNIT-III	12 hours
Intermediate-Code Generation: Variants of Syntax Trees, Three-Address Codes, Translation of Expressions: Operations within Expressions, Incremental Translation, Control Flow: Boolean Expressions: Short Circuited Code Flow of Control Statements, Control Flow Translation of Boolean Expressions, Backpatching for Boolean Expressions. Code Generation: Issues in the Design of a Code Generator, Basic Blocks and Flow Graphs, Optimization of Basic Blocks, A Simple Code Generator.	
UNIT-IV	12 hours
Run-Time Environments: Storage Organization, Static Allocation Strategy, Stack Allocation of Space: Activation Trees, Activation Records, Calling Sequence, Variable Length Data on the Stack. Symbol Tables: Symbol Table Entries, Data Structures to Symbol Tables, Representing Scope Information.	
Text Books:	Alfred V. Aho, Monica S Lam, Ravi Sethi, Jeffrey D. Ullman, "Compilers: Principles, Techniques and Tools", Pearson Education, Second Edition, 2013.
References:	1. Alfred V.Aho, Jeffrey D. Ullman, "Principles of Compiler Design", Narosa Publishing House. 2. "Lex & YACC", John R. Levine, Tony Mason, Doug Brown, O'Reilly. 3. "Modern Compiler Implementation in C", Andrew W. Appel, Cambridge University Press.

OPERATING SYSTEMS														
III B. Tech. – V Semester (Code:24CS502)														
Lectures	3	Tutorial	0	Practical	0	Credits	3							
Continuous Internal Evaluation			40	Semester End Examination				60						
Pre-Requisite: Digital Logic Design (24CS302), and Computer Organization (24CS401)														
Course Objectives:														
➤ To learn the mechanism of OS to handle processes & Threads and their communication. ➤ To learn the algorithms involved in CPU scheduling. ➤ To gain knowledge on concepts that includes Dead locks, Main Memory and Virtual Memory. ➤ To know the concepts related to File Access Methods & Mass Storage structure.														
Course Outcomes: At the end of this course, Students will be able to														
CO1	Analyze the structure of OS and basic architectural components involved in OS design.								BL2					
CO2	Develop various process scheduling algorithms for a given specification of CPU utilization, throughput, TAT, WT & RT.								BL3					
CO3	Articulate the causes and effects of deadlocks and comprehend memory management concepts, including virtual memory.								BL3					
CO4	Design and implement various file allocation methods and Disk Scheduling Algorithms.								BL2					
Mapping of Course Outcomes with Program Outcomes & Program Specific Outcomes														
	POs											PSOs		
CO	1	2	3	4	5	6	7	8	9	10	11	1	2	3

CO2	3	3	3	-	-	-	-	-	-	-	-	3	-	-
CO3	3	3	3	-	-	-	-	-	-	-	-	3	-	-
CO4	3	3	3	-	-	-	-	-	-	-	-	3	-	-
UNIT-1														
													12 hours	
Introduction: What Operating Systems Do, Computer-System Organization - Storage Structure, Computer-System Architecture - Single-Processor Systems, Multiprocessor Systems, Operating-System Operations.														
Operating-System Structures: Operating-System Services, User and Operating-System Interface, System Calls, Operating-System Structure, Building and Booting an Operating System.														
Processes: Process Concept, Process Scheduling, Operations on Processes, Inter- process Communication.														
UNIT-2													12 hours	

Threads: Overview, Multicore Programming, Multithreading Models.	
CPU Scheduling: Basic Concepts, Scheduling Criteria, Scheduling Algorithms.	
Process Synchronization: Background, The Critical-Section Problem, Peterson's Solution, Hardware Support for Synchronization, Mutex Locks, Semaphores, Monitors.	
Synchronization Examples: Classic problems of Synchronization.	
UNIT-3	12 hours
Deadlocks: System Model, Deadlock Characterization, Methods for Handling Deadlocks, Deadlock Prevention, Deadlock Avoidance, Deadlock Detection, Recovery from Deadlock.	
Main Memory: Background, Contiguous Memory Allocation, Paging, Structure of the Page Table, Swapping.	
Virtual-Memory: Background, Demand Paging, Copy-on-Write, Page Replacement, Allocation of Frames, Thrashing.	
UNIT-4	12 hours
Mass Storage Structure: Over View of Mass-Storage Structure, HDD Scheduling, NVM Scheduling, Storage Device Management, RAID Structure - RAID levels.	
File System Interface: File concept, Access Methods, Directory Structure.	
File System Implementation: File System Structure, Directory Implementation, Allocation Methods.	
Text Books :	Silberschatz & Galvin, "Operating System Concepts", 10th edition, John Wiley & Sons (Asia) Pvt.Ltd. ISBN 9781118063330.

MACHINE LEARNING														
III B. Tech. – V Semester (Code:24CS503)														
Lectures	2	Tutorial	1	Practical	0	Credits	3							
Continuous Internal Evaluation				40	Semester End Examination						60			
Pre-Requisite: Basic Calculus and Probability														
Course Objectives:														
➤ Learn a Regression Model. ➤ Comprehend a Supervised Learning Model. ➤ Apply Ensemble methods for improving the performance of a Learning Model. ➤ Apply an Unsupervised Learning Model.														
Course Outcomes: At the end of this course, Students will be able to														
CO1	Understand a very broad collection of machine learning algorithms, problems and apply the correct regression model for the given problem and implement it.											BL3		
CO2	Analyze the supervised discriminative and generate models for the given problem and implement it.											BL4		
CO3	Identify the supervised strong learning model for the given problem and implement it.											BL3		
CO4	Learn the basics of the learning problem with hypothesis, version spaces and choose the correct clustering algorithm for the given problem and implement it.											BL3		
Mapping of Course Outcomes with Program Outcomes & Program Specific Outcomes														
	POs											PSOs		
CO	1	2	3	4	5	6	7	8	9	10	11	1	2	3
CO1	3	3	3	3	3	-	-	-	-	-	2	3	3	3
CO2	3	3	3	3	3	-	-	-	-	-	2	3	3	3
CO3	3	3	3	3	3	-	-	-	-	-	2	3	3	3
CO4	3	3	3	3	3	-	-	-	-	-	2	3	3	3
UNIT-1													12 hours	
Machine learning basics: What is machine learning? Key terminology, Types of Machine Learning Systems, Steps in developing a machine learning application, Main Challenges of Machine Learning Essential														
Linear Regression: Simple linear regression. Optimization of model parameters using Batch gradient decent algorithm, Mini batch gradient decent algorithm and Stochastic gradient descent algorithm, Multiple linear regression, locally weighted linear regression, Polynomial Regression. Regularized Linear Models- Ridge Regression and Lasso Regression.														
UNIT-2													12 hours	
Generative Classifiers: Bayes' rule, Naïve Bayes classifier. Discriminative Classifiers: Logistic Regression, Decision Trees: Training and Visualizing a Decision Tree, Making														

Predictions, Estimating Class Probabilities, The CART Training Algorithm, Attribute selection measures- Gini impurity; Entropy, Regression Trees, Linear Support vector machines.	
UNIT-3	12 hours
Evaluation of a Classifier: Measuring Accuracy Using Cross-Validation, Confusion Matrix, Precision and Recall, Precision/Recall Trade-off, The ROC Curve. Ensemble Learning: Voting Classifiers, Bagging and Pasting, Random Forests, Boosting AdaBoost and Gradient Boosting.	
UNIT-4	12 hours
Instance-based Learning: Introduction, K-nearest neighbors Learning, Distance-Weighted Nearest Neighbour Algorithm. Unsupervised Learning: K-means clustering algorithm, DBSCAN, Gaussian mixture model.	
Text Books :	1. Hands-On Machine Learning with Scikit-Learn, Keras, and TensorFlow, Second Edition, Aurelien Geron, O'Reilly publishers, ISBN: 781492032649. 2. Andreas C. Muller and Sarah Guido. Introduction to Machine Learning with Python. Oreilly, 1 edition, 2016. ISBN 9781449369415.

ARTIFICIAL INTELLIGENCE																
(Professional Elective – I)																
III B.Tech – V Semester (Code: 24CS504/PE1A)																
Lectures	3 Hours				Tutorial		0		Practical		0		Credits		3	
Continuous Internal Evaluation							40		Semester End Examination					60		
Pre-Requisite: Data Structures(24CS303), Design and Analysis of Algorithms (20CS405), Discrete Mathematics (24CS205).																
Course Objectives: Students will be able to																
➤		Understand the fundamentals of Artificial Intelligence, intelligent agents, and problem-solving using uninformed and informed search strategies.														
➤		Understand the knowledge representation using propositional and first-order logic, and reasoning through inference mechanisms.														
➤		Develop the ability to model knowledge using structured representations and apply planning techniques to solve complex problems.														
➤		Familiarize with basic learning techniques and the design of expert systems for intelligent decision-making.														
Course Outcomes: At the end of this course, Students will be able to																
CO1		Comprehend the underlying ideas of artificial intelligence, as well as their environment and different search methods.												BL2		
CO2		Represent and reason about knowledge using propositional logic and first-order logic, including inference mechanisms.												BL3		
CO3		Apply knowledge representation methods and planning techniques to model and solve real-world problems.												BL3		
CO4		Analyze and design basic learning systems and expert systems for an intelligent decision-making.												BL6		
Mapping of Course Outcomes with Program Outcomes & Program Specific Outcomes																
		POs										PSOs

CO4		3	3	3	3	2	-	-	1	1	-	2	3	3	3	
UNIT-I																
														12 hours		
Introduction to AI: What is AI? , Foundations of AI, History of AI, State of the Art. Intelligent Agents: Agents and Environments, Good Behavior: Concept of Rationality, The Nature of Environments And The Structure of Agents.																
Solving Problems by Searching: Problem Solving Agents, Searching for Solutions, Uninformed Search Strategies: Breadth First Search, Uniform Cost Search, Depth First Search, Iterative Deepening DFS and Bi-directional Search.																
Informed (Heuristics) Search Strategies: Greedy BFS, A*Algorithm, AND-OR Search trees.																

Constraint Satisfaction Problems: Defining Constraint Satisfaction Problems, Local Search in CSP.	
UNIT-II	12 hours
Logical Agents: Knowledge Based Agents, The Wumpus World, Logic and Propositional Logic. Propositional Theorem Proving: Inference and proofs, Proof by resolution, Horn clauses and definite clauses, Forward and Backward chaining. First Order Logic: Representation, Revisited Syntax and Semantics of First Order Logic, Using First Order Logic, Knowledge Engineering in First Order Logic. Inferences in First Order Logic: Propositional vs. First Order Inference, Unification and Lifting, Forward Chaining, Backward Chaining, Resolution.	
UNIT-III	12 hours
Knowledge Representation: Ontological Engineering, Categories and Objects, Events, Mental Events and Mental Objects, Reasoning Systems for Categories, Reasoning with Default Information. Slot and Filler Structures: Semantic Nets, Conceptual Dependency, Scripts. Planning: Overview - An Example Domain, The Blocks World, Component of Planning Systems, Goal Stack Planning, Hierarchical planning, Reactive systems.	
UNIT-IV	12 hours
Learning: Introduction to learning, Rote learning, Learning by taking advice, Learning in problem solving, Learning from examples, Induction Learning, Explanation Based Learning. Expert Systems: Representing and using domain knowledge, Expert system shells, Explanation, Knowledge Acquisition.	
Text Books :	1. Stuart Russel and Peter Norvig, Artificial Intelligence – A Modern Approach, 3rd Edition, Pearson Education/ PHI.. 2. Elaine Rich & Kevin Knight, Artificial Intelligence, 3rd Edition, (TMH).

WIRELESS NETWORKS														
(Professional Elective – I)														
III B. Tech. – V Semester (Code: 24CS504/PE1B)														
Lectures	3	Tutorial	0	Practical	0	Credits	3							
Continuous Internal Evaluation			40	Semester End Examination			60							
Pre-Requisite: Computer Networks (24CS305)														
Course Objectives:														
➤ Understand the fundamentals of the wireless communications systems, the wireless network architectures, protocols, and applications. ➤ Understand architecture of different telecommunication systems and satellite systems. ➤ Understand architecture and layers of wireless local area networks and network layer for wireless environment. ➤ Understand network architectures of 4G and 5G Technology Advancements.														
Course Outcomes: At the end of this course, Students will be able to														
CO1	Understand the fundamentals of wireless communication systems, the principles of wireless transmission, Analyze and apply various multiplexing and modulation techniques, Evaluate spread spectrum techniques and cellular system concepts, Understand the need for specialized Medium Access Control (MAC) protocols.						BL5							
CO2	Understand the architecture and operation of major telecommunication systems, the radio interface mechanisms, Analyze and compare different telecommunication standards., Develop the ability to critically assess emerging telecommunication technologies.						BL5							
CO3	Understand the fundamentals of Wireless LAN technologies, architecture and operation of IEEE 802.11 standards, Analyze the performance and design considerations of WLAN systems, Understand the concepts of mobility at the network layer, key Mobile IP processes, evaluate routing challenges in mobile ad hoc networks (MANETs), Analyze and compare MANET routing protocols.						BL5							
CO4	Understand the evolution of mobile communication systems leading to 4G and 5G technologies, the architecture of 4G LTE networks, Analyze Quality of Service (QoS) mechanisms and bearer service architecture in LTE, Understand the technological advancements from LTE to beyond 4G systems, the 5G roadmap and key enabling technologies.						BL4

Department of Computer Science & Engineering

UNIT-I		12 hours
Introduction: Applications, Short History of Wireless Communications, Simplified Reference Model. Wireless Transmission: Frequencies, Signals, Signal Propagation, Multiplexing, Modulation, Spread Spectrum, and Cellular Systems. Medium Access Control: Motivation for a Specialized MAC, SDMA, FDMA, TDMA, CDMA, and Comparison.		
UNIT-II		12 hours
Telecommunication Systems: GSM: Mobile Services, Architecture, Radio Interface, Types of bursts, logical channels, localization and calling, handover, security, new data services, DECT, TETRA, UMTS and IMT-2000.		
UNIT-III		12 hours
Wireless LAN: Infrared Vs. Radio Transmission, Infrastructure and Ad Hoc Networks, IEEE 802.11: System Architecture, Protocol Architecture, Physical Layer, MAC Layer, and MAC Management. Mobile Network Layer: Mobile IP: Entities and Terminology, IP packet delivery, Agent discovery, Registration, and Tunneling and Encapsulation, Dynamic Host Configuration Protocol. Mobile ad-hoc networks: Routing, Destination sequence distance vector, Dynamic source routing.		
UNIT-IV		12 hours
4G and 5G Technology Advancements Part1: 4G – LTE: Network Architecture, QoS and Bearer Service Architecture. Part2: 5G: Evolution of LTE Technology to beyond 4G, 5G roadmap, 10 pillars of 5G.		
Text Books :	1. Jochen.Schiller, “Mobile communications”, Second Edition, Addison-Wesley, 2003. 2. Farooq Khan, “LTE for 4G Mobile Broadband” Line-Air Interface Technologies and Performance, CAMBRIDGE, 2009. 3. Jonathan Rodriguez, “Fundamentals of 5G Mobile Networks”, WILEY, 2015.

PARALLEL ALGORITHMS														
(Professional Elective – I)														
III B.Tech – V Semester (Code: 24CS504/PE1C)														
Lectures	3	Tutorial	0	Practical	0	Credits	3							
Continuous Internal Evaluation				40	Semester End Examination			60						
Pre-Requisite: None.														
Course Objectives:														
➤ Realize the basic sequential algorithms and Describe about basic parallel algorithms. ➤ Describe and use basic data structures; know about the existence of advanced data structures. ➤ Describe and use the main design techniques for sequential algorithms. ➤ Analyze message-passing based parallel algorithms in C using the MPI library.														
Course Outcomes: At the end of this course, Students will be able to														
CO1	Elucidate the parallel computing models and differentiate between sequential and parallel algorithms.								BL4					
CO2	Analyze the parallel algorithms for CRCW, CREW, EREW models.								BL4					
CO3	Identify correctness and analyze the computational complexity of sequential algorithms.								BL4					
CO4	Differentiate among several algorithms solving the same problem under different conditions.								BL4

CO4	3	3	3	3	2	-	-	-	-	-	3	3	3	-
UNIT-I										12 hours				
Introduction to Parallel: Computing, Components of Parallel Computing System, Multiprocessor vs. Multi-core Architecture, Why Parallelism, Moore’s Law, Sequential vs. Parallel Computing, Levels of Parallelism, Need for Parallel Programs, Models of Parallel Algorithm, Types of Parallel Computing, Application of Parallel Computing.														
UNIT-II										12 hours				
Architecture of Parallel Computers: Classification of Parallel Computers, Parallel Algorithms, Analyzing Parallel Algorithms, Amdahl’s Law, Cost Optimality of Parallel Algorithms														
Parallel Sorting and Searching: Parallel Searching Algorithms, Parallel Sorting Algorithms														
UNIT-III										12 hours				

PRAM Model of Computation, Model of Computation, RAM Model of Computation, PRAM Model of Computation, Conflict Resolution Techniques, PRAM Models, PRAM Algorithms	
UNIT-IV	
12 hours	
Graph Algorithms: Graph Terminology, Data Structure to Store Graph, Solving Problems with Graph, Trends in Parallel Computing: Cluster Computing, Grid Computing.	
Text Books:	Fundamentals of Parallel Computing Sanjay Razdan, Alpha Science International Ltd. Oxford, U.K.
References:	1. Michael J. Quinn, Parallel Computing: Theory & Practice, Tata McGraw Hill Edition, 2003. 2. Justin R. Smith, the Design and Analysis of Parallel Algorithms, Oxford University Press, USA, 1993. 3. Joseph JaJa, Introduction to Parallel Algorithms, Addison-Wesley, 1992.

ENTERPRISE PROGRAMMING														
(Job Oriented Elective – I)														
III B. Tech. – V Semester (Code: 24CS505/JO1A)														
Lectures	3	Tutorial	0	Practical	0	Credits	3							
Continuous Internal Evaluation			40	Semester End Examination			60							
Pre-Requisite: Object Oriented Programming (24CS304), Web Technologies (24CS403) and Database Management Systems (24CS404)														
Course Objectives:														
➤ Understand the evolution from J2EE to Jakarta EE, Design dynamic web applications using Servlets and develop database-driven applications using JDBC, JPA, and ORM frameworks like Hibernate. ➤ Design dynamic web applications using Servlets, RESTful services, and dependency injection. ➤ Implement enterprise business logic using EJB, messaging services, and persistence mechanisms. ➤ Build scalable and production-ready applications using modern frameworks like Spring Boot and Quarkus.														
Course Outcomes: At the end of this course, Students will be able to														
CO1	Explain Jakarta EE architecture, tiers, profiles, and enterprise application requirements, design and implement web applications using Jakarta Servlets and Develop database connectivity using JDBC (DriverManager and DataSource).						BL6							
CO2	Apply Context and Dependency Injection (CDI) for loose coupling and modular design and develop RESTful web services and clients using Jakarta REST API.						BL6							
CO3	Explain and implement different types of Enterprise Beans (stateless, stateful, singleton) and design persistent entities and relationships using Jakarta Persistence API and develop messaging applications using queues, topics, and message-driven beans.						BL6							
CO4	Develop applications using Spring Boot with layered architecture and analyze Quarkus framework and develop cloud-native applications.						BL6							
Mapping of Course Outcomes with Program Outcomes & Program Specific Outcomes

UNIT-I														12 hours

Bapatla Engineering College: Bapatla -522102 (Autonomous)

Approved by AICTE :: Affiliated to ACHARYA NAGARJUNA UNIVERSITY

Department of Computer Science & Engineering

Introduction to Jakarta EE : Understanding what Jakarta EE is - J2EE and Java EE, Cloud computing, Microservice architecture, Twelve-factors, Jakarta EE Goals, Jakarta EE Specification Process, Jakarta NoSQL, Eclipse enterprise for Java, From Java EE to Jakarta EE, Jakarta EE 9, Understanding the Jakarta EE Tiers, Jakarta EE profiles, Server applications, Requirements for working with Jakarta EE. Jakarta Servlet : Understanding what is Jakarta Servlet, Creating a Servlet, Filtering the request and response, Understanding Forward and RequestDispatcher, Asynchronous processing, Using Nonblocking I/O, Using Server Push. Handling Relational Databases with Java : Introduction to JDBC, Getting a database connection with the DriverManager class, Getting a database connection with the DataSource interface, Simplifying data handling with the Jakarta Persistence, Using Hibernate to handle database entities, Exploring JPQL and the Criteria API, Exploring local development approaches when using databases.	
UNIT-II	12 hours
Jakarta Context and Dependency Injection : Understanding Jakarta Context and Dependency Injection, Creating and injecting beans, CDI life cycle, Using producer method, producer field, and dispose method, Creating a CDI interceptor, Creating a CDI decorator, Using CDI event. Jakarta RESTful Web Service : Jakarta RESTful web service, Creating a RESTful resource class, Creating a Jakarta RESTful client, Asynchronous invocation in the client, Understanding how to use server-sent events.	
UNIT-III	12 hours
Jakarta Enterprise Bean : Understanding the Jakarta Enterprise Bean, Understanding the stateless bean, stateful bean, and singleton bean, Understanding how the Jakarta Enterprise Bean manages the transaction, Creating a schedule, Understanding how we can create a message-driven beans. Jakarta Persistence : Understanding the Jakarta Persistence, Creating an entity, Creating an entity relationship, Using JPQL, Controlling concurrent access to entity data, Creating fetch plans and entity graphs. Jakarta Messaging : Understanding the Jakarta Messaging, Creating a producer to queue, Creating the consumer to queue, Creating a producer to topic, Creating a consumer to topic, Creating a consumer using message-driven bean.	
UNIT-IV	12 hours
Building Production-Grade Systems with Spring Boot : Learning Spring fundamentals, The @Component annotation, The @Service annotation, The @Repository annotation, Using stereotype annotations, Using the Spring AOP - Bootstrapping a new Spring Boot project, Implementing a CRUD application with Spring Boot. Improving Developer Experience with Quarkus : Assessing Quarkus benefits, Kickstarting a new Quarkus project, Building a CRUD app with Quarkus, Managed beans, Application-scoped beans, Singleton beans, Request-scoped beans, Setting up Quarkus to work with databases, Handling database entities with EntityManager, Panache with repository pattern, Panache with active record pattern, Writing native applications.	
Text Books :	1. Jakarta EE for Java Developers - Build Cloud-Native and Enterprise Applications Using a High-Performance Enterprise Java Platform Rhuan Rocha. 2. Java real-world projects - a pragmatic guide for building modern java applications.

FULL STACK DEVELOPMENT														
(Job Oriented Elective – I)														
III B. Tech. – V Semester (Code: 24CS505/JO1B)														
Lectures	3	Tutorial	0	Practical	0	Credits	3							
Continuous Internal Evaluation			40	Semester End Examination			60							
Pre-Requisite: Web Technologies (24CS403)														
Course Objectives:														
➤ Understand full stack architecture and MERN stack concepts ➤ Develop interactive user interfaces using React and component-based design ➤ Build backend applications using Node.js and Express ➤ Design and implement RESTful APIs ➤ Manage data using MongoDB and NoSQL concepts ➤ Apply authentication, validation, and security techniques ➤ Use Git and GitHub for version control ➤ Deploy full stack applications using free cloud platforms														
Course Outcomes: At the end of this course, Students will be able to														
CO1	Build responsive frontend applications using React, including components, hooks, routing, and state management.						BL3							
CO2	Develop backend services using Node.js and Express, and create RESTful APIs with proper validation and error handling.						BL3							
CO3	Design and manage MongoDB databases, perform CRUD operations, and integrate APIs with backend systems.						BL3							
CO4	Apply authentication, security practices, version control, testing, and deploy full-stack applications on cloud platforms.						BL6							
Mapping of Course Outcomes with Program Outcomes & Program Specific Outcomes														
	POs											PSOs		
CO	1	2	3	4	5	6	7	8	9	10	11	1	2	3

CO4	3	2	3	3	3	-	-	1	1	-	2	2	2	2
UNIT-I								12 hours						
Frontend Development using React: Introduction to full-stack development, MERN stack architecture, React fundamentals, JSX, components, props, state, Functional components and hooks: useState, useEffect, Event handling and form handling, Component communication, React Router for navigation, Context API for basic state management, Introduction to TypeScript with React, Building responsive UI applications														
UNIT-II								12 hours						
Backend Development using Node.js and Express: Introduction to Node.js, runtime environment, Asynchronous programming: callbacks, promises, async and await, Node.js														

Bapatla Engineering College: Bapatla -522102 (Autonomous)

Approved by AICTE :: Affiliated to ACHARYA NAGARJUNA UNIVERSITY

Department of Computer Science & Engineering

modules and npm, Express.js framework, routing, middleware, MVC architecture basics, Handling HTTP requests and responses, Building REST APIs, Error handling and logging, Input validation using express-validator	
UNIT-III	12 hours
Database and API Integration: REST architecture principles and API design standards, HTTP status codes, pagination techniques, Introduction to NoSQL databases and MongoDB, MongoDB Atlas setup and tools, CRUD operations and schema design, Data modeling techniques, Integration of Node.js with MongoDB, Authentication using JSON Web Tokens, API testing using Postman	
UNIT-IV	12 hours
Advanced Topics and Deployment: Application security fundamentals, password hashing using bcrypt, authorization and protected routes, file handling basics, performance optimization techniques, introduction to testing using Jest, version control using Git, GitHub workflows, branching and merging, deployment of frontend using Vercel or Netlify, deployment of backend using Render or Railway, environment variables and configuration management.

MIDDLEWARE TECHNOLOGIES														
(Job Oriented Elective – I)														
III B.Tech – V Semester (Code: 20CS505/JO1C)														
Lectures	3	Tutorial	0	Practical	0	Credits	3							
Continuous Internal Evaluation			40	Semester End Examination			60							
Pre-Requisite: None.														
Course Objectives:														
➤ Understand the operations of HTML & Web controls with tracing. ➤ Apply styles using validation controls and rich controls by applying state management. ➤ Do operations on the database with ADO.NET fundamentals and format the data with data controls. ➤ Learn the framework, working with web services by following MVC.														
Course Outcomes: At the end of this course, Students will be able to														
CO1	Interpret the operations of HTML & Web controls with tracing.						BL2							
CO2	Implement styles using validation controls and rich controls by applying state management.						BL3							
CO3	Operate the database with ADO.NET fundamentals and format the data with data controls.						BL3							
CO4	Discuss framework, working with web services by following MVC.						BL6							
Mapping of Course Outcomes with Program Outcomes & Program Specific Outcomes

CO4	3	2	3	-	3	-	-	-	-	-	2	3	3	3
UNIT-I														
													12 hours	
The .NET Framework: C#, VB, and the .NET Languages, Intermediate languages, Common language runtime, the .NET class library.														
Web Form Fundamentals: Understanding the anatomy of an ASP.NET application, Introducing server controls, improving the currency converter, taking a deeper Look at HTML control classes, using the page class, using Application events.														
Web Controls: Stepping up to web controls, web control classes, List controls, Table controls, Web control events and AutoPostBack, An interactive web page.														
Tracing: Enabling Tracing, Writing Trace Information, Performing Application-Level Tracing.														
UNIT-II													12 hours	
State Management: Understanding the problem of the state, using View State, Transferring information between pages, using cookies, managing session state Configuring session state, using application state														
Validation: understanding the validation, using the validation controls.														

Rich Controls: The calendar, The Ad Rotator, pages with multiple views: Multiview, Wizard Control. Styles, Themes, and Master Pages: Styles, Themes, master page basics, advanced master pages.	
UNIT-III	12 hours
ADO.NET Fundamentals: Understanding databases, configuring your database, Understanding SQL basics, Understanding the data provider model, using direct data Access, using disconnected data access. Data Binding: Introducing data binding, using single valued data binding, using repeated value data binding, working with data source controls. The Data Controls: The grid view, formatting the gridview, selecting a grid view row, Editing with a grid view row, sorting and paging in gridview, using grid view templates The details view and form view.	
UNIT-IV	12 hours
LINQ and the Entity Framework: understanding LINQ, LINQ basics, using entity framework, Getting more advanced with entity framework, using the entity data source. Working with Services: What is WCF Web Service, Application for Creating and Consuming a WCF Web Service? Putting ASP.NET MVC in Context: Understanding the history of ASP.NET, Key Benefits of ASP.NET MVC. Your First MVC Application: Preparing Visual Studio, Creating a new ASP.NET MVC Project, Rendering Web Page, Creating a simple Data Entry Application.	
Text Books:	1. "Beginning ASP.NET 4.5 in C#", Matthew MacDonald, A press Publishing Company. 2. "Professional ASP.NET 4.5 in C# and VB", Jason N. Gaylord, Christian Wenz, Pranav Rastogi, Todd Miranda, Scott Hanselman, John Wiley & Sons, Inc., Indianapolis, Indiana 3. "Pro ASP.NET MVC 5", Adam Freeman, A press Publishing Company.

LINUX ESSENTIALS														
(Skill Enhancement Course – 3)														
III B. Tech. – V Semester (Code: 24CSL501/SEC3)														
Lectures	1	Tutorial	0	Practical	2	Credits	2							
Continuous Internal Evaluation			40	Semester End Examination			60							
Pre-Requisite: None.														
Course Objectives:														
➤ To organize and manipulate files and directories and use the vi text editor to create and modify files. ➤ To use SED command for insertion, deletion, search and replace (substitution) and Understand pattern scanning and processing using AWK. ➤ To create structured shell programming which accepts and use positional parameters and exported variables. ➤ To understand File management system calls to provide I/O support for storage device types and multiple users.														
Course Outcomes: At the end of this course, Students will be able to														
CO1	Write basic commands for data processing						BL3							
CO2	Apply filter commands on data files						BL3							
CO3	Develop shell script programs for applications						BL6							
CO4	Develop programs on file management system calls for applications						BL6							
Mapping of Course Outcomes with Program Outcomes & Program Specific Outcomes														
	POs											PSOs		
CO	1	2	3	4	5	6	7	8	9	10	11	1	2	3
CO1	3	2	2	2	2	-	-	3	2	-	2	3	2	2
CO2	3	2	2	2	2	-	-	3	2	-	2	3	2	2
CO3	3	2	2	2	2	-	-	3	2	-	2	3	2	2
CO4	3	2	2	2	2	-	-	3	2	-	2	3	2	2
UNIT-I														
													12 hours	
Directory commands: pwd, cd, mkdir, rmdir commands. The dot (.) and double dots (..) notations to represent present and parent directories and their usage in relative path names.														
File related commands: Editing with vi, cat, mv, rm, cp, wc. File attributes and permissions and knowing them. The ls command with options. Changing file permissions: (chmod) the relative and absolute permissions changing methods. Recursively changing file permissions. Directory Permissions.														
Other Basic commands: cal, date, df, du, find, jobs, kill, less and more, ps, set, wc, who.														
Work Sheet														
1. Obtain the following results (i) To print the name of operating system (ii) To print the login name (iii) To print the host name.														
2. Find out the users who are currently logged in and find the particular user too.														

3. Display the calendar for (i) Jan 2000 (ii) Feb 1999 (iii) 9th month of the year 7 A.D (iv) For the current month (v) Current Date Day Abbreviation , Month Abbreviation along with year.
4. Display the time in 12-Hour and 24 Hour Notations.
5. Display the Current Date and Current Time.
6. Display the message —GOOD MORNING in enlarged characters.
7. Display the name of your home directory.
8. Create a directory SAMPLE under your home directory.
9. Create a subdirectory by name TRIAL under SAMPLE.
10. Change to SAMPLE.
11. Change to your home directory.
12. Change from home directory to TRIAL by using absolute and relative pathname.
13. Remove directory TRIAL.
14. Create a directory TEST using absolute pathname.
15. Using a single command change from current directory to home directory.
16. Remove a directory using absolute pathname.
17. Create files my file and your file under Present Working Directory.
18. Display the files my file and your file.
19. Append more lines in the my file and your file files.
20. How will you create a hidden file?.
21. Copy myfile file to emp.
22. Write the command to create alias name for a file.
23. Move yourfile file to dept.
24. Copy emp file and dept file to TRIAL directory
25. Compare a file with itself.
26. Compare myfile file and emp file.

UNIT-II

12 hours

The Stream Editor(sed): Line addressing, multiple instructions, context addressing, writing selected lines to a file, text editing, substitution, basic regular expressions.

File Handling and Text Processing utilities: grep, egrep, fgrep.

AWK: sample awk filtering, splitting a line into fields, formatting output, variables and expressions, comparison operators, number processing, storing awk programs in a file, the BEGIN and END sections, Built in variables and arrays, control structures.

Work Sheet

1. Create the following file as sed.lab: unix is great os. unix is open source. unix is free os. learn operating system. Unix linux which one you choose.(Each sentence in a line)
 - Replace `_unix` with `_linux`.
 - Replace only the third (3rd) instance of `_unix` with `_linux`.
 - Try `sed 's/unix/linux/g' sed.lab`.
 - Replace `_unix` with `_linux` but only on line 3.
 - Add a new line, `_Actually Windows is best` after the second line.
2. Viewing a range of lines of a document
 - Viewing the entire file except a given range
 - Viewing non-consecutive lines and ranges

• Replacing words or characters inside a range • Using regular expressions • Viewing lines containing with a given pattern • Inserting spaces in files • Performing two or more substitutions at once 3. • Design a command “wishme” that will greet you —good morning good Afternoon , according to current time. • Design a command “fags” that will list the files and their ages, to date. • Design a command “word-freq” that will print the words and number of Occurrences of that word in the given text.	
UNIT-III	12 hours
Shell programming: shell, functions of shell, metacharacters, input redirections and output redirections, pipes, shell as a programming language, shell variables, predefined local variables, predefined environment variables, arithmetic and conditional expressions, control structures, positional parameters, passing command line arguments, built in shell commands, shell programs, functions and arrays. Work Sheet 1. • Design a command “ which” that prints the path of the command given as Argument • Design a command “filelist[-c <char>]” which prints all file names beginning with The charater specified as argument to the command, if the position is not specified It should print all the file names. • Design a command getline[-f <filename> -n <line number>] which prints the line number lineno in the file specified with -f option.If the line number is not specified it should list all the lines in the given file • Design a command monthly-file[-m <month>] which list the files created in a given month where month is argument to be command. If the options is not specified it list the files in all the months. 2. • Design a command list lines[-f <file name> -v <varname>] which prints the line from the given file file_name, which containing the variable varname. if varname is not specified it should list all the lines. • Design a command avg[-n <colon> -f <file name>] which prints the average of the given column in a file where colon and file name are arguments to the commands	
UNIT-IV	12 hours
File management System calls: Regular File management system calls: open(), read(), write(), lseek(), close(), unlink(), stat(), getdents(). Work Sheet 1. Write a C program to copy data from source file to destination file, where the file names are provided as command-line arguments. 2. Write a C program that reads every 100th byte from the file, where the file name is given as command-line argument. 3. Write a C program to display information of a given file which determines the type of file and inode information, where the file name is given as command-line arguments

FULL STACK DEVELOPMENT LAB															
(Job Oriented Elective – I Lab)															
III B.Tech – V Semester (Code: 24CSL503/JOL1B)															
Lectures	0	Tutorial	0	Practical	3	Credits	1.5								
Continuous Internal Evaluation				40	Semester End Examination							60			
Pre-Requisite: Web Technologies Lab (24CSL403)															
Course Objectives:															
➤ Develop practical skills in building full stack applications using modern technologies ➤ Implement server-side logic and client-side interfaces ➤ Integrate APIs and databases in real-time applications ➤ Deploy applications and manage source code using version control															
Course Outcomes: At the end of this course, Students will be able to															
CO1	Develop Node.js applications demonstrating asynchronous programming and file handling													BL3	
CO2	Build dynamic web applications using Express and REST APIs													BL3	
CO3	Integrate MongoDB database operations in applications													BL3	
CO4	Develop and deploy complete full stack applications using MERN stack													BL6	
Mapping of Course Outcomes with Program Outcomes & Program Specific Outcomes															
	POs											PSOs			
CO	1	2	3	4	5	6	7	8	9	10	11	1	2	3	
CO1	3	2	3	1	3	-	-	1	1	-	2	2	3	2	
CO2	2	3	3	2	3	-	-	2	2	1	2	2	3	2	
CO3	3	3	3	2	3	-	-	1	2	-	2	3	3	2	
CO4	3	3	3	2	3	-	-	1	2	1	2	2	2	2	
LIST OF EXPERIMENTS															
														48 hours	
1. Develop a Node.js program to demonstrate synchronous and asynchronous operations. 2. Build a server-side application to store and manage book ratings and reviews using in-memory data. 3. Develop a Node.js web server for file handling and streaming. 4. Demonstrate MongoDB operations using MongoDB Compass. 5. Demonstrate MongoDB operations using MongoDB Shell. 6. Develop a Node.js application to perform CRUD operations. 7. Design and implement a REST API and use it in an Express application such as a notes system. 8. Create a Blog Management System using Express routing. 9. Build a Social Media Posts API using Express with features such as like, share, and comment. 10. Build a Student Records System using MongoDB query operators. 11. Develop a mini e-commerce application using Express with session and cookie handling. 12. Create a Sales Report System using aggregation operations such as group, sum, and average. 13. Develop a Library Management System with proper data validation and integrity.															

Bapatla Engineering College: Bapatla -522102 (Autonomous)

Approved by AICTE :: Affiliated to ACHARYA NAGARJUNA UNIVERSITY

Department of Computer Science & Engineering

Each student shall complete one end-to-end full stack project including frontend, backend, database, authentication, and deployment using GitHub.

MIDDLEWARE TECHNOLOGIES LAB														
(Job Oriented Elective – 1 Lab)														
III B.Tech – V Semester (Code: 20CSL503/JOL1C)														
Lectures	0	Tutorial	0	Practical	3	Credits	1.5							
Continuous Internal Evaluation			40	Semester End Examination							60			
Pre-Requisite: None.														
Course Objectives:														
➤ Understand the operations of HTML & Web controls with tracing. ➤ Apply styles using validation controls and rich controls by applying state management. ➤ Do operations on the database with ADO.NET fundamentals and format the data with data controls. ➤ Learn the framework, working with web services by following MVC.														
Course Outcomes: At the end of this course, Students will be able to														
CO1	Execute applications using HTML & Web controls with tracing.													BL3
CO2	Implement applications on rich controls and validation controls with state management.													BL3
CO3	Interpret the applications on ADO.NET fundamentals for matching data with data controls.													BL2
CO4	Solve the applications on framework and web services by following MVC.													BL3
Mapping of Course Outcomes with Program Outcomes & Program Specific Outcomes

CO4	3	3	3	-	3	-	2	-	2	-	3	3	3	3
LIST OF EXPERIMENTS														
													48 hours	
1. Design an ASP.NET application to demonstrate Web Form markup and redirection. 2. Design an ASP.NET application to demonstrate Web Controls and Html controls. 3. Design an ASP.Net application to demonstrate List Controls and to display a table dynamically. 4. Design an ASP.Net application to demonstrate Cross page Postback and QueryString to transfer data between Web pages. 5. Design an ASP.Net application to demonstrate the use of Cookies and using cookies how to transfer data between web pages. 6. Design an ASP.Net application to demonstrate use of session state and using session state how to transfer data between Web Pages. 7. Design an ASP.NET application to demonstrate Validating ASP.NET Web Pages using Validation Controls. 8. Design an ASP.NET application to demonstrate Rich Controls. 9. Design an ASP.NET Web Site with Styles, Themes and Master Pages. 10. Design an ASP.NET application to work with SQL Server Database using ADO.NET.

CAMPUS RECRUITMENT TRAINING														
III B. Tech. – V Semester (Code: 24CS506/MC04)														
Lectures	2		Tutorial		0		Practical		0		Credits		0	
Continuous Internal Evaluation					40		Semester End Examination					-		
Pre-Requisite: None.														
Course Objectives:														
➤ To enhance linguistic proficiency by developing skills in grammatical correction, contextual vocabulary usage, and the ability to comprehend and reorganize complex textual information. ➤ To build a strong foundation in proportional reasoning for solving mathematical problems related to business partnerships and chronological age calculations. ➤ To develop the ability to calculate possibilities using counting principles and probability, and to cultivate analytical skills for extracting insights from various data visualizations. ➤ To sharpen spatial intelligence and logical deduction through the mental manipulation of shapes, figures, and visual patterns.														
Course Outcomes: At the end of this course, Students will be able to														
CO1	Demonstrate effective communication skills by applying verbal, non-verbal, and business communication techniques.												BL3	
CO2	Apply the principles of ratio and proportion to model and solve real-world quantitative problems involving equitable profit distribution in partnerships and the calculation of chronological age relationships.												BL3	
CO3	Calculate the likelihood of complex events by applying counting principles (Permutations and Combinations) and utilize Data Interpretation techniques to analyze, visualize, and draw logical conclusions from diverse numerical datasets.												BL4	
CO4	Apply logical reasoning and mathematical modeling to solve complex problems by integrating visual pattern recognition, combinatorial analysis, and the probabilistic interpretation of data.												BL4

ADVANCED DATA STRUCTURES & ALGORITHMS							
II B. Tech. – IV Semester (Code: 24CSH4A)							
(Honor Course – 1)							
Lectures	3	Tutorial	0	Practical	2	Credits	4
Continuous Internal Evaluation			25T + 25L		Semester End Examination		50T
Pre-Requisite: Data Structures (24CS302), Design & Analysis of Algorithms (24CS405)							
Course Objectives:							
➤ To Understand the advanced concepts of efficient binary search trees and Hashing. ➤ To learn various priority queues, and efficient disjoint-set data structures for solving large-scale data management problems. ➤ To apply advanced graph algorithms to solve computational problems optimally. ➤ To develop and analyze the randomized algorithms, and efficient string searching techniques.							
Course Outcomes: At the end of this course, Students will be able to							
CO1	Construct the various efficient binary search trees and analyze the advanced hashing techniques such as cuckoo and extendible hashing.						BL4
CO2	Implement Binomial Heaps and Apply union–find operations to find cycles in a graph.						BL3
CO3	Solve complex problems using graph algorithms.						BL4
CO4	Employ randomized algorithms and implement efficient string searching methods.						BL3
UNIT-I							12 hours
Efficient Binary Search Trees & B-Trees- Red-Black Trees, Splay Trees, 2-3 Trees, 2-3-4 Trees – Properties, Rotations, Insertion, Deletion.							
Hashing – Double hashing, Rehashing, Cuckoo hashing, Extendible Hashing.							
UNIT-II							12 hours
Priority Queues (Heaps) – Binomial Heaps, Fibonacci Heaps, Structure of Fibonacci heaps, Mergeable-heap operations, decreasing a key and deleting a node, Bounding the maximum degree.							
Disjoint Sets – Disjoint-set operations, Linked-list representation of disjoint sets, Equivalence Relations, The Dynamic Equivalence Problem, Applications.							
UNIT-III							12 hours
Dictionaries- Definition, Dictionary Abstract Data Type, Implementation of Dictionaries using Linked lists and Hash Tables.							
Graph Algorithms – Topological Sort, Network Flow Algorithm, Bipartite Graphs.							
UNIT-IV							12 hours
Randomized Algorithms - Random-Number Generators, Skip Lists, Primality Testing.							
String Searching Algorithms – Brute-Force Algorithm, Rabin-Karp Algorithm, Knuth-Morris-Pratt Algorithm.							

LIST OF EXPERIMENTS		32 hours
1. Implement the following operations on a 2-3 Tree: 1. Insertion 2. Search 3. Traversal 2. Implement the following operations on a Red-Black Tree: 1. Insertion with recolouring and rotations 2. Search 3. Inorder traversal 3. Implement the following operations on a Splay Tree: 1. Splay (Zig, Zig-Zig, Zig-Zag) 2. Insert 3. Search 4. Delete 4. Implement the following operations on a Binomial Heap: 1. Insert 2. Merge 3. Find-min 4. Delete-min 5. Consider the telephone book database of N clients. Make use of a Hash Table implementation to quickly look up client's telephone number. 6. Implement all the functions of Dictionary ADT using hashing. 7. Program to find number of cycles in an undirected graph using Dis Joint Sets. 8. Implement Topological Sort. 9. Program to search for the pattern in a given string using Naïve String-matching Algorithm. 10. Program to search for the pattern in a given string using Robin-Karp Algorithm.

ADVANCED DATABASE MANAGEMENT SYSTEMS							
III B. Tech. – V Semester (Code: 24CSH5A)							
(Honor Course – 2)							
Lectures	3	Tutorial	0	Practical	2	Credits	4
Continuous Internal Evaluation			25T + 25L		Semester End Examination		50T
Pre-Requisite: Database Management Systems (24CS404)							
Course Objectives:							
➤ To understand the fundamentals of NoSQL databases, their architecture, types, and appropriate use cases compared to traditional RDBMS systems. ➤ To learn installation, configuration, data models, and CRUD operations in MongoDB using Shell and basic commands. ➤ To apply aggregation pipelines, operators, and indexing techniques for efficient data querying and optimization. ➤ To develop applications using MongoDB with Python, including data import/export, sharding, and driver-level integration.							
Course Outcomes: At the end of this course, Students will be able to							
CO1	Compare RDBMS with NoSQL databases and identify suitable NoSQL types for different applications.						BL4
CO2	Perform CRUD operations, manage collections, and manipulate data using MongoDB.						BL3
CO3	Use MongoDB aggregation pipelines and indexing mechanisms to optimize data processing and retrieval.						BL3
CO4	Build applications using MongoDB and Python, including sharding, import/export, and driver-based operations.						BL6
UNIT-I							12 hours
Introduction to NoSQL: Difference between RDBMS and NoSQL Database, Definition of NoSQL, History of NoSQL, NoSQL Storage Architecture, Types of NoSQL databases- Document Databases, Key-value databases, Column Oriented databases, Graph databases, When to use NoSQL and when not, Interfacing and Interacting with NoSQL.							
UNIT-II							12 hours
Introduction MongoDB: MongoDB installation, Basics of MongoDB, MongoDB shell, MongoDB datatypes, MongoDB CRUD operations: adding new documents to a collection, selecting documents, updating existing documents, removing documents from a collection.							
UNIT-III							12 hours
MongoDb Aggregation frameworks and MongoDb Aggregation operations: \$group, \$limit, \$project, \$sort, \$match, \$add fields, \$count, \$lookup, \$out operators. MongoDb sorting, MongoDb indexing: single field indexes, sorting with indexed, compound indexed, partial indexes.							
UNIT-IV							12 hours
MongoDb import and export, sharding in MongoDB, MongoDB python drivers, python and MongoDB, creating application with python and MongoDB.							
LIST OF EXPERIMENTS							32 hours

1. Program to demonstrate the differences between RDBMS and NoSQL using sample schema and JSON documents.
 - Create a sample SQL table and equivalent NoSQL documents.
 - Compare flexibility, schema, and query model.
2. Program to classify and demonstrate NoSQL data models (Key-Value, Document, Column-family, Graph) using Python examples.
3. Install MongoDB, create a database, and insert multiple documents using MongoDB shell.
4. Write a Python (PyMongo) program to perform CRUD operations
 - insert_one()
 - find()
 - update_one()
 - delete_one()
5. Program to demonstrate MongoDB data types
 - String, Number, Date, Boolean
 - Arrays and Embedded documents
6. Implement queries with filtering, sorting, projection, and limit in MongoDB.
7. Program to implement MongoDB Aggregation Pipeline with \$match, \$group, \$project operators.
8. Program to perform \$lookup (join) between two MongoDB collections.
9. Program to create and use indexes
 - Single-field index
 - Compound index
 - Partial index
10. Program to implement \$sort, \$limit, \$count and display performance difference with/without indexing.
11. Program to import and export data using mongoimport and mongoexport.
12. Program to connect Python with MongoDB (PyMongo) and build a mini application
Example: Student management system.
13. Program to implement pagination using skip() and limit() in Python + MongoDB.

Text Books :	1. MongoDB – The Definitive Guide, 2nd edition, Oreilly. 2. Pramod J.Sadalage, Martin Fowler, "NoSQL Distilled: A Brief Guide to the Emerging World of Polyglot Persistence", 1st edition, Pearson Education, 2012.

REAL-TIME OPERATING SYSTEM							
III B. Tech. – VI Semester (Code: 24CSH6A)							
(Honor Course – 3)							
Lectures	3	Tutorial	0	Practical	2	Credits	4
Continuous Internal Evaluation			25T + 25L		Semester End Examination		50T
Pre-Requisite: None							
Course Objectives:							
➤ Understand the architecture and core concepts of the QNX RTOS. ➤ Learn to develop and debug applications using the QNX Momentics IDE. ➤ Gain knowledge of process and thread management, including synchronization techniques. ➤ Explore inter-process communication (IPC) methods and their applications in QNX. ➤ Understand hardware programming concepts, including interrupt handling and memory access. ➤ Learn to build and configure QNX boot/OS images for embedded systems.							
Course Outcomes: At the end of this course, Students will be able to							
CO1	Describe the QNX OS architecture and its microkernel-based design.						BL2
CO2	Develop and debug QNX-based applications using appropriate tools.						BL6
CO3	Apply process/thread management and synchronization techniques in QNX.						BL3
CO4	Implement inter-process communication methods for real-time systems.						BL3
CO5	Configure and build QNX boot/OS images for specific hardware platforms.						BL6
CO6	Develop strong knowledge on the POSIX standards that help in System Application Development						BL2
UNIT-I							
12 hours							
Overview of QNX OS architecture: Microkernel, Process manager, and standards. Protected address spaces, process/thread model, and scheduling. Introduction to inter-process communication (IPC) and synchronization. Resource managers and shared objects. Process management: creation, termination, and memory protection.							
UNIT-II							
12 hours							
Thread management: creation, termination, and synchronization. Synchronization techniques: mutexes, semaphores, and condition variables. Hands-on exercises: process/thread creation and synchronization. Overview of IPC methods in QNX: message passing, pulses, and shared memory.							
UNIT-III							
12 hours							
Comparing IPC methods: advantages and disadvantages. Practical implementation of IPC in QNX. Hands-on exercises: message passing and shared memory. Hardware access methods: IO-mapped and memory-mapped IO. Interrupt handling and DMA-safe memory allocation.							
UNIT-IV							
12 hours							
Timing architecture: periodic timing, one-shot timing, and timeouts. Hands-on exercises: interrupt handling and timing mechanisms.							

Overview of QNX boot/OS image structure. Components of a boot image: startup code, kernel, drivers, and scripts. Building and loading boot images onto target hardware.	
Text Books :	1. QNX Neutrino RTOS User's Guide, QNX Software Systems. 2. Programming for Embedded Systems, Michael Barr, O'Reilly Media. 3.
